I suppose that's why NASA uses banks of headset wearing operators to copy the weak signals from their deep space probes, eh? CW hasn't been the method of choice to get through when other techniques fail for a long time. Better methods have been developed, and those methods have become available to amateurs as well, witness Clover and PACTOR II which can maintain communications when you can't even detect the presence of a signal by ear.

20 wpm is not that hard to copy. Some countries
>require 30 wpm or more.

Which ones?

>Also, cw has been a great screening tool. Just have to "Pay your
>dues" & learn it.

Uh huh, I suppose that's why we have such sterling operators on HF now, huh? Recall that NALs are issued disproportionately to those holding licenses requiring a Morse speed test. Correlation? Certainly. Causation, not so clear. And show us where the purpose of licensing has anything to do with "paying dues". Og the caveman could beat out rhythms on a log, but does that satisfy a government concern that he could operate a radio transmitter without causing harm to himself or others? I think not.

Hello everyone.
I need to know if the following has occurred anytime in the last 3 months or is happening now. The situation is this, my call has been bootlegged by a know offender here in Phoenix Arizona and I need to know if it has been used on ANY of the hf Ameture radio bands. If you have heard my call (N7ZZT) on any of these bands, please send me e-mail to my home bbs (N7ZZT@KC7Y.AZ.USA.NOAM) as soon as possible.
Please detail what was said, to whom, when it was said, and all the other usual stuff.
I am needing this information as part of a case I am building against this individual and his associates.
Your cooperation will be GREATLY appreciated...
Thank you in advance for you time and patients.
Eric Oyen (N7ZZT)

ARRL Bulletin 29 ARLB029
FROM ARRL Headquarters
Newington CT JULY 9, 1991

In 1991, they told us:

1: According to an FCC news release dated July 9, the US and Mexico
2: have made reciprocal operating arrangements. The agreement will
3: permit amateurs from each country to operate their amateur stations
4: in the other country. In the release, FCC noted that this agreement
5: would enhance the public service efforts of amateurs. FCC is
5: expected to release a public notice shortly describing the necessary
6: procedures for obtaining a reciprocal permit in Mexico.

This is 1996. Where's our agreement?

Hi Steve... Actually, to be a little bit more accurate regarding the "maximum" speed... Would it be more correct to say a maximum speed of "up to but not including 13 wpm?" Maybe better would be "at least 5 wpm but not 13 wpm."

The 5 wpm maximum just didn't quite set well with me. Had to be said. :-)

Having investigated this patent, it appears to cover a very, very
narrow area of widely used prior art. I particular it is a device that
can be added to an existing IC in an existing circuit to cool a single
IC. The
method of coolling (peltier junction, heat sink and fan) has been used
in many different fields - so there is nothing new here.

As far as it practical value, you would have to have room in the
device enclosure to add the add-on cooler, an method of
expelling the removed heat from the enclosure and some source of power

for the add-on
device(s). The needed additional room sounds sgnificant with the heat sink and fan. For each IC you needed to cool, you would need a seperate device.

It also appears that this patent is not even a very good replication of the
prior art of IC cooling. In the abstract it does not mention any method of regulating the IC being cooled. A peltier device will lower the temp of it host device by a certain level from the ambiant temperature. This means that as the ambiant temperature changes, so will the temperature of the cooled device. Regulation sets the device temperature at something less then the full cooling capability of the peltier junction and then monitors the temperature and regulates the peliter junction to insure the
cooled device stays at a constant temperature.

If the cooler is unregulated, then wild swings in ambiant temperature will produce wild swings in the device temperature.

In my humble opinion, this patented device is not worth much. It does not do the job well. There is so much prior art in this field that one could create a slightly different device and not be in conflict with this patent and would probably do a better job.

3296. New Ham needs HT/Base 2M Advice

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-10 00:00:00 UTC
From: dber@tiac.com
Message-ID: <314328d7.21968608@news.tiac.net>
Source record: 229767

Hello all,

I just passed the exams and the 5WPM code test to earn my Tech Plus license (which should arrive this week - I check daily online!). After passing, I ordered a basic 2M 50W mobile for installation in my car. The price was good and the choices were simple... but I also want to get a "base" station for my room. Here are my questions.

(1) How effective are the handhelds if connected to a well-mounted roof antenna (I'm considering the simple Cushcraft AR-270 mounted on my chimney)? Would it be possible to hit repeaters more than a few miles away?

(2) When they say a handheld is 2.5W with 5W out for 9.X volts does that mean if I use a wall adapter I will get the full 5W out? Do the adapters typically come standard with HTs?

(3) Anyone using a power amplifier for their HTs? How effective and do the cheaper (less than $100) ones work well? I don't want to buy an amp if it's not really needed. I just want enough power to get to the more popular receivers which my current scanner is able to receive very well.

(4) If I decide to get a small mobile for base use, does anyone know any good places to get descent but inexpensive power supplies? I assume I would want at least 12-16A Continuous to be sure I have the power needed...?

(5) How well do the HTs work when connected to a simple (MFJ) mag mount antenna on the roof of a car? How effective are they compared to mobile mounts with the same antenna (obviously the power is different, how much difference is typical in real use). Owning the HT would be an added benefit of being able to use an HT in a car other than my own (which will have a permanent 2M mobile).

(6) Any suggestions on simple 2M HTs ... I'm mostly considering Yaesu.

Thanks much in advance and take care,

73

I can hear it now...

Policymaker #1: "Okay, and how about enlisting the help of amateur radio operators?"

Poicymaker #2: "Definitely not. Those CB's will interfere with our superior radio systems."

Pfft, I think not...but with the intelligence level that some of these people have, I wouldn't be surprised if they said something like that.

Not me. Where would it end? Would it become illegal to turn on your
broadcast radio because it might distract you? Or become illegal to drink
coffee while driving? Or talk on your two metre rig?

It's sufficient that drivers who do something that causes an accident can
be sued for it. We don't need more laws with blanket restrictions on the
majority of people who act responsibly because a few don't.

We can encourage people, for example to use hands-free car phones, but
with the exception of actually dialing the number there's probably not a
lot of difference between talking on a car phone and operating mobile. And
we do lots of that without causing accidents.

>engineering.

Come on, Jim. It's pretty difficult to get much low angle radiation on any of the low bands with your antenna much lower than that if you're using a dipole or other horizontal antenna. Even a half wave - which on 80 metres is about 130 feet - has about a 30 degree angle of radiation which makes your hops pretty short, and seriously reduces your long range communication capability on that band.

What's more, having the antenna at a low level decreases the vertical separation between your antenna and the neighbours TV, his TV antenna or cable, or his broadcast radios, INCREASING the possibility of your neighbour receiving harmful interference.

If you can't find any engineering reasons, you're not looking very hard.

The earliest one I know of is the old K6MYK tailed carrier AM repeater
placed on top of Mt. Lee, near Hollywood, California by Art Gentry, W6MEP
in the late fifties. That probably makes the "Hollywood" sign the
landmark.

I heard on Newsline that we shouldn't plan on bringing our rigs to the
Olmypics in Atlanta because we won't be allowed in. What about this
spring, before the games, are they doing anything?

Subject: Operating Amateur Radio in Mexico

I am trying to learn how I can get permission to operate on two meters in Mexico. I plan to travel to Guadalajara in April and to live in Mexico for several months. I hold a Technician Plus licence. The FCC could not give me much information. I wrote to the Mexican Consulate, however, I have not received a reply and time is running out. Any help you can give will be greatly appreciated.

Thank you,

Elsie Bolack (KB4NRP)

Check the amateur rules of the FCC, specifically 97.11(c) where it says..."For a station aboard an aircraft, the apparatus (ham station) shall not be operated while the aircraft is operating under Instrument Flight Rules, as defined by the FAA, unless ther station has been found to comply with all applicable FAA rules"..

Since all commercial aircraft flights operate under IFR all the time, regardless of weather, and most likely your station hasn't been checked out on that particular aircraft, its against the rules...

The primary navigation and landing aids on an aircraft (VOR and ILS) operate in the 108-118 MHz range, the vertical guidance (glideslope) is in the 330 MHz range, and we all know what close transmitters do to our ham radios. So would you like to be making an approach in bad weather to landing minimums (100 ft ceiling and 1/4 mile visibility ahead) and about the time you get low, somebody keys his mike, turns on his laptop, fires up the cellular, turns on the electric razor, etc... OOPS, aw shucks....

The possibilities for interference are endless, and all commercial aircraft are thoroughly checked BEFORE critical use to make sure they don't have any spooks...

So for your OWN protection, keep the HT in the OFF position while on board...

Cole Cunningham,
Commercial, Instrument and Multiengine rated pilot, Avionics Design Engineer for 20+ yrs, FAA Licensed Repairman, FCC General Ticket, Amateur Extra....

>>It seems to me that the only reason morse code exists is to keep
>>HF an elite club for amateurs who feel they are too good for those of
>>us who have more important things to learn besides morse code.. That is
>>why the upper class hams still argue for it.

If you say so.

In the meantime, while you guys are off learning your more important things, we'll be on HF using our homebrew radios, building new equipment, and having fun! I'm up to 8 states and 2 countries, and it's been a blast so far! 100% homebrew 40m station, superhet receiver, 18W transmitter.

I say Morse is a useful tool, in that it gives one a simple modualtion method to take advantage of while learning about radios in their simplest form: CW receivers and transmitters. The NEED to know Morse for emergency comms is all but gone, but the utility of the mode continues.

>

Hmmm... I remember when I was a tech, I was limited as to what I could do
with HF antennas and such. I put up a small 2meter beam and got on 2 SSB
and CW. I worked lots of CW (this was abt 15-20 years ago in KS). In fact,
most of my CW to get my speed up to upgrade was on VHF. True, a lot of
my contacts were scheds with friends, but by no means, all of them. Look
at swapmeets, its that time of year again. Look for an Icom 211, or a Kenwood
TS700 or similar. Find a cheap beam, a few elements (make sure you put it
up horizontally polarized). There are more and more all-mode VHF rigs
available, with the IC 706 and all. Tropo openings can be a blast, but I'd
be surprised if there wasn't some local activity. Unless you live in the
sticks where the men are men and the sheep are nervous. If your budget
places the rigs I mentioned out of reach (they're older solid state) then
look for an old Gonset or Heath lunchbox or something.

GG>

While ARRL is obviously the most visible "strong voice", don't discount some other fine organizations who very ably represent us, both in "general" terms, and in terms of their "interest group". AMSAT, TAPR, QCWA, and NARA come to mind immediately, and there are several others who should not feel slighted if I overlooked them.

a tech plus is anyone who has credit for elements 2 and 3A of the written exams (some have element 3B from the days of the single element 3 test..pre-3/21/87) plus credit for passing any code speed test (even if it was 13 or 20..and it'd expired you'd still get credit for 1A...and would carry on..)

tech plus get tech VHF privileges plus Novice HF privileges.

> tumors result from using mobile phones.

Spoken by someone who 'absolutely' doesn't know what he's talking
about. Go get an education kid and then come back and blow your smoke.

I have personally seen:

A. A VOR reciever give false heading readings when a 2MTR talkie was
transmitting (various failures from partial to full scale deflection
of the indicator, to loss of lock entirely).

B. A DME failure when a 450HT was transmitting.

Not once, or in just one Airplane, but a number of times under a number
of conditions. It happens, it can KILL you. You're STUPID.....

I would suggest contacting the ARRL or the nearest Mexican Embasy etc.
The ARRL keeps copies of the forms and address you need to mail them to
to get tempory operator rights in most countries. I do not know the rules
for Mexico, but you must fill out some paperwork and send it in to get
the right to operator in Mexico.

It is not clear on which point that you disagree - either that it is indeed outdated and therefore it is useless, or that because of these characteristics it should be dumped, which in itself you have not clarified. Does dumping mean that it should not be used or abolish the testing. It is difficult to make a comment when the points are not clearly argued.

> In today's amateur radio of repeaters, satellites, PC's, and digital
> communication, morse code does seem unnecessary from a purely technical
> point of view.

More to the point, it doesn't seem to be unnecessary, it is unnecessary, not only from a purely technical point of view, but from a practical stand point as well. On the other hand, I, and many others who argue against Morse code testing, would not discourage anyone from learning and using the Morse code.

> However the same argument could be made for voice
> communication.

However, unlike voice communications, Morse code is the only testing element for which an individual must demonstrate before priviledges are granted for operation below 30 MHz.

> Obviously, digital transmission is more reliable, more
> efficient, and does not rely on the treacherous human ear. In time you
> could dump phone too. If this hobby is merely about technical progress,
> and nothing more, then why speak to each other?
>

But the forms of communications between amateurs, and their subjective or objective values, are not the issue. The issue is to what extent must the government test individuals in order to ensure that those individuals will operate their stations will do so with minimal disruption to other users of the radio frequency spectrum. Morse code testing does not pass this test.

> I would hope that this hobby is about the satisfaction of communicating
> with each other by all modes. To me, mastering the code is a challenge
> that I welcome. I think it is a skill that binds amateurs together as
> a fraternity and not merely as a bunch of technicians.

>

Nice speach, but it is not true. Indeed, the advent of no-code amateur certification has proven that this assertion is untrue. Otherwise, the arrogant message underlying this contention is that if one does not know Morse code, then you are not a real ham. Nothing could be further from the truth.

> Also, if cw is obsolete and should be scrapped, what about QRP? >

Indeed, there are other modes which are much better suited towards qrp operation than CW. For example, Clover has a protocol by which the stations have dynamic power control, where the levels are adjusted to take into account the changing propagation conditions. Let us not forget that with the development of DSP technologies, we are able to decode signals that are below the noise level such that aural decoding is impossible. Moreover, there are circuits available for those who wish to use dynamic power control for Amtor as well.

What is most distressing is that most of the QRP adherents themselves not only seem to be content in using CW exclusively for their communications, but have little inclination to investigate other modes which would be an improvement over CW.

> Obviously,
> if this hobby is merely about pure practicality, then it behooves all
> amateurs to transmit with the maximum power required to assure DX > reception
> at their objective.

Claptrap.

>QRP is fun and challenging however, like cw.
>

But that is part of the problem. QRP is felt to be facet of amateur radio in which the only domain is CW. I daresay, the 60+ plus countries that I have confirmed on QRP Baudot has been a thrill for me as well.

> Every aspiring carpenter or cabinetmaker learns hand woodworking skills
> before being turned loose with a power saw.
>

An amusing analogy, but it doesn't work. It doesn't work because the unstated assumption that knowledge of CW is necessary in order to be a good operator. That link doesn't exist.

> I think that finally it is about enjoying the hobby. If cw continues
> to be used in strong numbers, after new amateurs learn the code as a

>

If CW turns your crank, all fine and good. But that doesn't justify Morse code testing just because of you enjoy using that mode. Furthermore, if Morse code is so popular, then Morse code testing is not even required because everyone would be using it. That doesn't seem to be the case.

I will also agree with your posted statement. I enjoyed
the code practice sessions which helped me to pass my 5 wpm
element on the exam. I am a newly licensed amateur and am
looking foward to the time that I can put a CW station on the air.
I am proud of my skill that allows me to copy code. Personally
I would have it no other way....

Hello all,

I've been very much out of touch from amateur radio activity and have
been trying to get back into the fray. One thing I liked to do (before my
radio hiatus) was public service work. Any opportunities for such in the
near future, such as the Austin American 10K? If so, whom do I contact
for more information?

Also: does anyone know of when the next hamfests in or near austin are
due to be held? I think Manchaca is due soon, but I don't have a clue as
to when it will be this spring. Any other 'fests near Austin scheduled
within the next 6 months?

Thanx,
R. Camama

3337. Morse Code in Music

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-11 00:00:00 UTC
From: BPasternak@gnn.com
Message-ID: <4i2bbq$ng3@news-e2a.gnn.com>
Source record: 229665

MORSE CODE in MUSIC

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's latest solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is also worth
noting...it is littered with Morse code characters.
The album's song titles are all spelled out in Morse Code!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with a heavy
percussion belting out "YYZ" and then followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson,
the guitarist for the band, who holds a private pilots
license.

Carter Bennett, KI5SR, brings to my attention that there is
badly formed Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this track
has some RTTY going in and out of tune. KI5SR continues with
information regarding the album "Saving the Wildlife" by
Mannheim Steamroller. He states that there is a track on the
album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, brings to my attention that there is
Morse Codeon Ronnie Montrose's album
(Elektra 1982 EI-60034) "GAMMA 3". The song "Stranger"
contains Morse Code which spells "STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated

CW message in it. The song was titled "MISS MORSE".
The song is said to have vulgarities in it spelled out
with Morse Code.
The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info abt Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at abt 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, informed me of a TV show called
"INSPECTOR MORSE". Craig has never seen the show but,
from info gathered, states that the inspector's name is
never given in the show. It is alleged, however,
to be contained in Morse Code which is played as part of
the show's introductory music.

Howie, N2WX and Mark, KM6XU, informed me that
"Radioactivity" by Kraftwerk has lots of good Morse code
in it. Mark also states that the band Missing Persons has
a song with some code in it but Mark didn't supply any
info on the song.

A message from John, NI6D, brought to my attention of
pseudo Morse code in the song "Radio Silence" on
Thomas Dolby's album titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to
"Planet Claire", a kind of Spy vs. Spy mood is created
by the music, and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are commercial
station callsigns.
More information pertaining to the code comes in from Ron,
VE3RYN. Ron says that "NAKS" should be "NAWS" which stands for
'North Atlantic Weather Station' and "CFH" is a CDN military
ship/shore station located near Halifax, Nova Scotia.

Michael, W9OJ, claims that the words "love you" are spelled
out in morse code at the end of the "Iron Butterfly Theme"
by Iron Butterfly. This song is on their first album "Heavy"
and is also on the double album titled "Rare Flight".

Ian, VK2IAQ, writes in with information stating that the
UK rock band 'Barclay James Harvest' has two songs which
contain morse code. Ian states that the song
"Nova Lepidoptera", a sci-fi song from the 1977 album "XII",

starts off with "UFO" repeated in slow morse code.
Also, the title track of the album "Ring of Changes"
starts with the title sent twice in morse code.
John Lees, the lead guitarist, is a licensed amateur
operator in the UK.

Bill, WA6ITF, reports some really good Morse code on the CD
"SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Well, that's abt it for now. TNX to all who have provided me
with information on this subject es TNX to all who have
inquired abt the subject.
Until next time, KEEP POUNDING BRASS!

73 de Brian Pasternak

--According to what I have been reading here, dumping morse code requirements is supposedly justified because some readers consider it outdated and therefore useless. As an aspiring amateur, I do not agree.

In today's amateur radio of repeaters, satellites, PC's, and digital communication, morse code does seem unnecessary from a purely technical point of view. However the same argument could be made for voice communication. Obviously, digital transmission is more reliable, more efficient, and does not rely on the treacherous human ear. In time you could dump phone too. If this hobby is merely about technical progress, and nothing more, then why speak to each other?

I would hope that this hobby is about the satisfaction of communicating with each other by all modes. To me, mastering the code is a challenge that I welcome. I think it is a skill that binds amateurs together as a fraternity and not merely as a bunch of technicians.

Also, if cw is obsolete and should be scrapped, what about QRP? Obviously, if this hobby is merely about pure practicality, then it behooves all amateurs to transmit with the maximum power required to assure DX reception at their objective. QRP is fun and challenging however, like cw.

I have read cw compared to calculating by pencil and paper when calculators are available to think for us. Personally, while I use a calculator, I value the ability to work things out when one is not at hand. Similarly, I do not always use a cordless electric screwgun for one or two wood screws or a pneumatic nail-gun to hang a picture. The ability to use cw can be likened to the ability to use hand tools in preference to power tools. Every aspiring carpenter or cabinetmaker learns hand woodworking skills before being turned loose with a power saw.

I think that finally it is about enjoying the hobby. If cw continues to be used in strong numbers, after new amateurs learn the code as a legal requirement to HF priveleges, then the requirement should remain. If cw use dwindles to low numbers, then perhaps it is time to change.

That's my two cents worth anyway.

Shane

From my perspective, the key question is not whether you enjoy CW, etc.,
but whether it should be a requirement for a license. If it is not a
requirement, you could still use and enjoy it. And with respect to
your analogy with cabinetmakers, it is no longer true that new
cabinetmakers always start out with hand tools. You can argue that they
should, but they don't necessarily follow this route.

:>

You know, I could never understand this obsession with contesting or chasing DX as in the above example you commented on, Gary.

Maybe I'm crazy (maybe?...hell..definately!), but I can't see what either contesting or DX chasing had to do with making Amateur Radio better. If just 1/2 of the time these people spent on such nonsense was channeled into making genuine advancements in the radio art, Ham Radio would be at the fore-front in technology like it used to be. Somewhere along the way we've lost our "edge" and I don't see it returning any time soon.

We could really use some good high-speed packet networks instead of this stupid, mindless shouting for 10 second contacts. 10 seconds? Did I REALLY say that? I meant 5 seconds.....yeah, that's really Ham radio.....NOT!!

>want to get a "base" station for my room. Here are my questions.

Congratulations.

>(1) How effective are the handhelds if connected to a well-mounted
>roof antenna (I'm considering the simple Cushcraft AR-270 mounted on
>my chimney)? Would it be possible to hit repeaters more than a few
>miles away?

The problem is not so much transmit range but IMD. Most HTs will
overload and squall from the pager crud when hooked to a real
antenna, IE not the rubber dummy load that comes with them. So
you can have real problems receiving signals without a lot of
crud. Some HTs are better than others in this respect, but
they're all subject to the problem to one extent or another.

However, another name for the Cushcraft antenna is the
aluminum dummy load. :-) So you might not have too much of a
problem with IMD, but you may have problems hitting the repeaters.
A Comet or Diamond, or even an AEA Isopole, will perform much
better. But if you use a good antenna, then you've got to do
something about the IMD. The best thing you can do is use a
filter inline with the antenna coax to block the out-of-band
signals causing the IMD. Tucker, Alabama Radio, and PAR sell
suitable filters for around $100.

At least some mobile rigs are fairly IMD resistant, and they
can be used in the house with a suitable power supply. That's
probably the best solution since you will be able to hear and
be heard thanks to the higher power available. There are few
things more annoying than trying to carry on a roundtable on
the repeater when one of the participants is using a handi-
scratchie with a signal right at the repeater noise threshold.

>(2) When they say a handheld is 2.5W with 5W out for 9.X volts does
>that mean if I use a wall adapter I will get the full 5W out? Do the
>adapters typically come standard with HTs?

Usually, the wall warts are just for recharging the batteries at
the 10-14 hour rate. They can't supply enough current to allow the
radio to operate on its high power setting. Some HTs can be powered
off of external DC with the battery connected, but others will only
charge the battery from external DC, IE any operating you do is still
only off the battery, not the external supply. Be careful here, read
the manual carefully, and ask a lot of questions before assuming you
can run the HT off of external power without a special adapter that
replaces the battery, IE the Yaesu PA-6 for example.

>(3) Anyone using a power amplifier for their HTs? How effective and
>do the cheaper (less than $100) ones work well? I don't want to buy
>an amp if it's not really needed. I just want enough power to get to
>the more popular receivers which my current scanner is able to receive
>very well.

Most of the little amps work Ok, even the Ramsey. But again you have
to be careful since some of the off brands can spray spurious all over
the band. Name brand amps are usually better. Note that you're starting
to accumulate quite a tangle of boxes and cords at this point, and a
simple mobile rig starts looking like a much better choice.

>(4) If I decide to get a small mobile for base use, does anyone know
>any good places to get descent but inexpensive power supplies? I
>assume I would want at least 12-16A Continuous to be sure I have the
>power needed...?

The Astron supplies are pretty much the amateur standard. They work
well, and are easily repaired if they ever do have a problem. Good
clean power is important, don't skimp, buy a trustworthy supply.
Switching supplies can be a problem, unless they are built for use
with a transmitter, they are often sensitive to RF. And when a switcher
fails, it often fails putting out a *very* high voltage that can damage
your equipment. Most linear supplies can't fail that way. An Astron
RS-20A should power any 2m mobile rig you might buy, and still have
a bit of power left over to run a few accessories.

Of course you *can* run off a 12 volt battery, and charge it periodically.
Gell cell batteries can be used, or marine deep cycle or traction batteries
can be used. Avoid starting batteries, they'll quickly be ruined by deep
discharges. The advantage of going with battery power is that you are ready
in case of emergencies that leave you without AC power. Any cheap automotive
battery charger (or the auto and a set of jumper cables) can be used to
recharge the battery.

>(5) How well do the HTs work when connected to a simple (MFJ) mag
>mount antenna on the roof of a car? How effective are they compared to
>mobile mounts with the same antenna (obviously the power is different,
>how much difference is typical in real use). Owning the HT would be
>an added benefit of being able to use an HT in a car other than my own
>(which will have a permanent 2M mobile).

You have the same problem with an external antenna on a car used with a HT as you do with a HT on an external antenna at the house, IE the intermod monster comes to play. So you need that filter again. Now a magmount is *almost* as good an antenna as a properly hole mounted antenna as long as you can keep the coax from getting pinched. So that's not a big concern. MFJ doesn't have a great reputation for quality control, but their magmount really isn't any worse than anyone else's magmount as long as it doesn't have a cold solder joint (and you can easily fix that). However, Larsen mounts and antennas are the best, and aren't really *that* much more expensive.

>(6) Any suggestions on simple 2M HTs ... I'm mostly considering Yaesu.

You may have gathered by now that I'm trying to steer you away from the HT option. It suffers a lot of drawbacks compared to a real radio. The HT is, IMHO, a specialist tool, only for foot mobile use. It isn't a good substitute for a real radio under many conditions. However, if you do decide to get a HT, everybody but Kenwood makes good ones.

Yaesu, Icom, Alinco, and Standard all make good HTs. I like the recent Standard models best because they don't seem to suffer quite as much intermod, but the other makes aren't horrible when used on their factory supplied rubber dummy loads either. The Yaesus are pretty nice, with the FT51R probably the best of its breed. That's a dualbander of course, but their little FT-10 is a nice tiny 2m radio. (But you haven't seen tiny until you check out the itty bitty Standard.)

None of the HTs work well with external antennas without a filter. Even the filter often can't help the Kenwoods. (Kenwood, IMHO, has never had a clue about how to make a good VHF/UHF radio, mobile, base, or HT, though from time to time they make very good HF radios, the TS-520 was a gem for its day.)

I will make an exception to my general condemnation of HTs. You could crystal up a GE PE or a Motorola for a few amateur frequencies and have a good rugged radio that will perform well. They forego the Gameboy features in order to bring you solid communications performance. (And even better, you can probably pick one up for under $50.)

Elsie,

You need to take your visa with you and your U.S. license and, I think, a picture I.D. Go to the S.C.T. office as soon as you get there. It will cost about $70.00 U.S. money.

If you live near the border, you could go down and do it ahead of time; but I wouldn't bother unless you're real close. The people in San Diego sometimes do that; but they only have to drive 15 miles.

Hope this helps.

Source record: 229791

I wouldn't want to slight Gary, KE4ZV. That is a very complete
analysis. Perhaps Gary is a little more critical than some of us.

The only thing I have is Yaesu hand-held. I use it in my motorhome
with a mag-mount antenna. I have a J-pole in the apartment which
works just fine. I can hit repeaters 20 and 30 miles away --
actually one is about 80 miles away.

I guess it depends on your pocket book. If you can afford it, do
everything Gary says. I have a limited budget. In my opinion,
I would sooner get the best hand-held I can and leave it at that.

With the way things are advancing these days in technology, your
radio is out-dated in a couple of years. So, then I just have to
throw away ONE radio.

73, & welcome to the hobby,

Jack VE3EED/W7

Bob,

There are two ways to mod your radio. You can contact Uniden and request
a UC-1250 CPU and replace the original one. Then cut pins 34 & 35 from ground
and solder both to pin 33 and you will get full coverage. You will loose
the repater offset feature though.

There is an aftermarket chip sold by Chip Switch that sells for about $50.00
that would give you full coverage and repeater offsets. I suggest you buy
the Chip Switch as it gives you more bang for your buck. You can reach
Chip Switch at (707)539-0512.

: Hi Steve... Actually, to be a little bit more accurate regarding the
: "maximum" speed... Would it be more correct to say a maximum speed of
: "up to but not including 13 wpm?" Maybe better would be "at least 5 wpm
: but not 13 wpm."

: The 5 wpm maximum just didn't quite set well with me. Had to be said. :-)

Who is to say that the tech plus couldn't copy 25 wpm ?
Or, maybe he can't copy code at all anymore.

Maybe he can't pass the written. Maybe he can, but doesn't want to.
Maybe there hasn't been an exam in his area for several years.

All we can really say is that the tech + has passed a 5wpm test.
We really can't say much more.

John

And unless the FCC has changed its mind lately (possible since the
move to an all VE exam system), they'll accept a First or Second
Class Radiotelegraph certificate in lieu of any amateur Morse speed
test. So you could get a Tech+ license without taking any of 1(A),
1(B), or 1(C). No written credit for the commercial certificate,
however, since at least the rules and regs part is different.

: My question.. Will Internet be the death of Amateur radio, or an
: enhancement to the hobby? Let me know what you think. 73 de N0ISL John in
: Minnesota.....

I tend to feel that people become interested in either, for different reasons and uses.

Personally, I have trouble seeing what the interest is in the digital modes. I just bought a book on packet radio yesterday; not that I am that interested, but as treasurer and Field Day chairman for our local club, it is a good way to stay in contact with the other officers and members. But I wonder why so many members of our club are such packet evangelists? The data rates and propagation times are in the stone age, when compared with the Internet.

The Net, a d the WWW in particular, has enhanced my enjoyment of ham radio by providing the great web pages, callsign lookup, online pricing, mailing lists and many other areas with current information. But ham radio is the hobby, and the Net is the adjunct.

But if a ham on the other side of the country had both Internet and packet access, you can bet that I would use the Net to send a time-critical message to him.

<snip>

There is no question that the F.C.C.'s methods of allotment are wrong.
Government does not own the magnetic spectrum any more than it owns
all land, all personal property, or the heat from the sun.

It is also evident that ideas transmitted over the air, regardless of
format, fall under the Constitutionally-protected right to free
speech.

Nevertheless, and regardless of the sins of the F.C.C., the act of
transmission on a frequency one does not own is trespass. Kobres was
indeed exercising his right to free speech, but the F.C.C. did not
infringe on that. They merely removed a trespasser from property that
didn't belong to him.

Kobres' actions are similar to someone who breaks into their
neighbor's house, then claims they have a right to be there because
they're talking.

Ridiculous.

NEWSLINE RADIO - CBBS EDITION #969 - POSTED 03/10/96

The following is late news about Amateur Radio for Radio Amateurs
as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR
RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. Amateur
Radio Newsline is a audio news service distributed via telephone.

This hardcopy version is produced by Dale Cary - WD0AKO from
scripts
provided to him weekly by Newsline. It is then distributed to on-line
services, bbs networks and internet user jointly by Dale Cary and
Steve Coletti.

Editorial comments, news item and all other business should be
directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: 3241437@mcimail.com
MCI E-mail: WESTRADIO
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

Dale Cary, WD0AKO
Hardcopy Distribution for Newsline

Internet E-mail: wd0ako@rrnet.com
MCI E-mail: DCARY
Phone: (218) 236-6324

The audio version of Newsline can be recorded from one of the
currently operating lines listed below. This list is kept as accurate
as possible. If any changes are not listed, please contact Dale Cary,
WD0AKO at the above listed addresses.

The following is a QST

The FCC now says that hams who work in the Amateur Radio industry
can become Volunteer Examiners, a bomb blast destroys the headquarters
of the United Kingdoms Radiocommunications Agency and bad news on HF
band conditions for at least another year. These stories and more on
Newsline report number 969 coming your way right now!

(*****
VEC CHANGE

Your favorite radio salesman may soon be giving ham radio exams.
This is because the FCC has formally eliminated conflict-of-interest
provisions that had kept those involved in the manufacture,
distribution or sale of ham radio gear from taking part in the VEC
testing system. The FCC action also conforms the ham radio rules to
the new Communications Act of 1996, recently signed into law by
President Clinton.
The former provisions essentially precluded equipment manufacturers

and their employees and anyone who prepares or distributes ham radio
license study materials from administering Amateur Radio license
examinations. The purpose was to prevent an employee from favoring
examines who had purchases manuals or equipment produced or
distributed by the VE or the VE's employer. The FCC has concluded

that other rules provisions, combined with current Amateur Radio license examination procedures, will protect against potential abuses. The Commission has also eliminated a requirement that volunteer examiners and volunteer examiner coordinators maintain records of out-of-pocket expenses and annually certify those expenses to the FCC. The FCC says that VEs and VECs still may recover actual out-of-pocket costs from examinees. The maximum reimbursement fee is six dollars and seven cents for 1996.
The rules changes became effective February 28th. The FCC says that

because each exam is administered by three VEs and coordinated by a VEC it would be highly unlikely for any examine to be favored by a VE or VEC. The agency notes that twelve years of experience with the VEC system has shown that breaches of trust by VEC's and VE's can be dealt with swiftly and immediately. This, by disaccrediting the offending VEs or rescinding the VEC agreement.

(*****
FCC TO VEC'S: COOPERATE

The FCC has told the nations VEC's to stop bickering and to cooperate in all aspects of testing. As reported last week, the American Radio Relay League has asked that the commission declare the current VEC mechanism to be null and void. This, because the League believes that a decision by most of the nations VEC's to incorporate leaves those who do not want to join the new organization out in the cold in maintaining the test question pool.
It now looks as if the FCC is not going to heed the Leagues call to

create a new mechanism. Probably because the FCC has new telecommunications legislation to implement and it cannot chance getting itself involved in a protracted court battle should the new National Council of Volunteer Examination Coordinators decide to sue for restraint of free trade.
But the FCC does at least appear to sympathize with the Leagues position. In the notice announcing the testing rules changes just reported, the regulatory agency took pains to point out that Section 97.523 requires VECs to cooperate in maintaining a single question pool for each examination element. As a result, all exam materials and manuals must draw from that same standard question pool, which is widely available to the public.

(*****
NOVICE & TECHNICIAN QUESTION POOL REWRITE

And speaking about the VEC Question Pool, Gordon West, WB6NOA, informs us that June 30th is the cutoff date for the consideration of new or deleted questions for the Novice and Technician class pools. As is always the case, the Question Pool Committee is inviting the ham radio public to take part in revising the testing syllabus for exam elements 2 and 3A. New questions should center around the FCC rules, operating practices and procedures, propagation, electrical

principles, practical circuits and circuit components plus signals emissions and antennas and feedlines.
The Question Pool Committee will only review submissions on their form titled Recommended Change to the Amateur Question Pool. You can get a copy by writing to the:

Question Pool Committee
c/o Ray Adams, N4BAQ
5833 Clinton Highway
Suite 203
Knoxville, Tennessee
37912

Forms are also available from:

Fred Maia, W5YI
P.O.Box 565101
Dallas, Texas
75356

If you don't want to wait for a form, Gordon West says that you can

drop him a note with your suggested question or change and he will gladly submit a form for you. Gordon's address is:

Gordon West, WB6NOA
2414 College Drive
Costa Mesa, California
92626

The finalized new Novice and Technician Class question pools will be
placed into public domain as ASCII files on December 1st. Printed copies will become available next January the 1st. Testing using the revised Novice and Technician question pool will begin on July 1st of 1997 -- about 16 months from now.

(*****
RETIRED ARRL DIRECTOR SLAIN

One of the two hams found murdered in Mississippi on February 23rd was a retired ARRL Director and a well-known DXer. As reported last week, Floyd Teetson, W5MUG, and his wife, Winnie, WN5YTR, were found on February 23rd. Police reports say that the couple had been killed a day or two earlier.
From 1962 to 1963 Floyd Teetson served as ARRL Delta Division Director. According to an ARRL press release, W5MUG was an honor roll DXer and active contester. He had been a member of several multi-op contest teams operating from various Caribbean DX sites.
A native of Wisconsin, Floyd Teetson was a retired electrical engineer who had been employed by the telephone company in Jackson, Mississippi. The couple moved to Louisiana from Mississippi five or six years ago.

The Webster Parish Louisiana Sheriff's Department and Louisiana State Police are investigating, but no arrests have been made. Nor have authorities speculated on a motive for the brutal killings.

(*****
BOMB DESTROYS UK RADIOCOMMUNICATIONS
AGENCY BUILDING

The new office the United Kingdoms Radiocommunications Agency has been severely damaged in the recent bomb blast. The GB2RS News Service says that following the explosion on February 8th, the Radiocommunications Agency was forced to move out of its headquarters building. At this time the Agency does not know where or when it will be relocated.
The Radio Licensing Center at Bristol was unaffected and thankfully

none of the agencies' staff was badly hurt in the incident. The Radiocommunications Agency is Great Britain's equivalent of our FCC.

(*****
BLIND HAMS NEED HELP

Also from Great Britain comes word that an organization that aids handicapped hams has added a new service for the visually impaired. The Radio Amateurs Invalid and Blind Club is looking to hear from blind amateurs who would like to receive tape recordings of readings from technical magazines. On tape already are selections from Radio Communications Magazine, Practical Wireless, Short Wave Magazine and others. The service is free in the United Kingdom but those making requests will need to supply their own audio cassettes. Visually handicapped hams elsewhere should write for details to:

Shelagh Chambers
78 Durley Avenue
Pinner
Middlesex
The United Kingdom
HA5 1JH

(*****
HAMS RESCUE ALZHEIMERS PATIENT

A missing 87 year old Alzheimers patient has been found alive in Indiana thanks to ham radio. Jack Parker, NT9J of Amateur News Weekly has more:

"The Bartholomew County search and rescue team was activated. They

assisted Brown and Barthlowmew County Authorities in the search for a 87 year old man with Alzheimers. The man had walked away from his home Helmsberg, IN on Monday. He was found late Tuesday afternoon about 1/4 mile from home suffering from frostbite on his feet. The Bartholomew Country Search and Rescue provided communications via

amateur radio for the search team." NT9J

Hams have been praised for their efforts in this search.

(*****
PHASE 3D SHOCK TESTS SUCCESSFUL

AMSAT North America says a series of qualification shock tests have

been successfully completed for the Phase 3D specific bearing structure. That's the structure which will be used to carry the Phase 3D spacecraft into orbit during launch. The tests in late January and early February exposed the structure to the shock environment expected to be encountered on the Ariane 5 vehicle during liftoff. Tests also successfully demonstrated the operational performance of the spacecraft's separation system.

(*****
AMATEUR RADIO DEMONSTRATES NASA EMPHASIS ON
TELECOMMUNICATIONS

The ARRL has made arrangements with two Amateur Radio volunteers to

represent the Shuttle Amateur Radio Experiment at the Technology and Learning Conference in Dallas, in October. The conference will be attended by school administrators. NASA, which approached the ARRL about the conference feels that SAREX should be included because it helps reinforce the U.S. government's heightened emphasis on telecommunications. The presentation will also cover NASA Spacelink, a telephone and Internet-accessible information system for school teachers, and NASA TV.

(*****
BAD SOLAR NEWS

Solar prognosticator Tad Cook, KT7H, reports via the ARRL that solar
activity has edged even lower. Cook says that here have been no visible sunspots since the beginning of the month, and the sunspot number was zero for the period February 8th to 14th. Solar flux was at or below 70 each day also.
Cook says that we should expect more periods of no sunspots as the current cycle bottoms out over the next year. Unfortunately, the geomagnetic field has been acting up a little. The worst period was around 09:00Z on February 13, when the K index was 5.
The 160 and 80 meter bands are really best when the solar flux is low, but an active geomagnetic field can disturb those low bands greatly but none seem imminent.
The latest information from the Space Environment Laboratory at Boulder, Colorado, agrees with Cook. It has updated its forecast for the sunspot minimum. It is not now expected to occur until early 1997, with a smoothed sunspot number down to 8.

(*****
TOP BAND CODE PRACTICE IN UK

A new United Kingdom Morse practice station may be a good DX beacon

for Top Band operators worldwide. The GB2CW Slow Morse practice transmission is now being broadcast at 20:15 UTC on Sundays on 1850 KHz in the 160 Meter band. The transmission is from the North Cheshire Radio Club, operated by Gordon Adams, G3LEQ, and is primarily intended for nationwide coverage in the UK.

(*****
80 AND 6 METER UK CW CHANGES

There has also been a small change to the 80 and 6 meter GB2CW transmissions from G3LEQ. These are now broadcast at 9:45 UTC on Sundays on 3640 KHz and 51.530 MHZ. DX QSN reports on any of the GB2CW transmissions are welcomed by the operators. You can contact the individual operators directly, or alternatively write to the coordinator:

David Pratt, G4DMP
11 Moorleigh Close
Kippax
Leeds
The United Kingdom
LS25 7PB

(*****
DX

In other DX, Melville Island will be activated by VK8NSB and VK8HZ for four days starting on March 15th. Australian DX sources say that the operation has been finally given the go ahead after a lot of hard work and negotiations from the aboriginal community. The call sign for this DXpedition will be VK8MI operating on all bands, including 6 Meters.
Also XV7SW, in Vietnam has reportedly put up an Inverted L antenna for 80 and 160 meters and be adding an Inverted Vee for 40 meters. His location in downtown Hanoi is very noisy and he is limited to 100 watts on the TopBand. The terms of his license limit him to specific frequencies. QSL direct to:

Rolf Salme
Embassy of Sweden
Box 9
Hanoi
Vietnam

or to his QSL Manager SM3CXS.

And Jim Smith, VK9NS, says that the VK0WH logs covering November

26th to December 31, 1995 have been received from Warren Hull via fax. Warren made slightly more than 200 contacts during that time. Jim

anticipates receiving VK0WH logs on a monthly basis. Jim also received the VK0WH QSL cards from the printer and says that he will QSL immediately upon receipt if he has the appropriate log in hand.

(*****
YHOTY '96 NOMINATIONS SOUGHT

A reminder that the nominating period for 1996 "Newsline Young Ham of the Year Award" is now open. The award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby service.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

1996 Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the Ham Radio Club BBS general interest ham files area on America Online.
And remember that the youngster chosen this year will get to spend a
week at Spacecamp Huntsville complements of CQ Magazine.

(*****
NEWSLINE PHONE SERVICE CUTBACK

And finally, due to the lack of response to our funding requests, and as a cost cutting measure, Newsline will soon shut down one of our two Los Angeles outgoing lines. Which line and the exact date has not been decided. We'll make that decision and announce it in a couple of weeks.
We realize this may pose an inconvenience for some listeners, and apologize in advance. However, with a dozen other independently sponsored lines across the nation and three audio sites on the World Wide Web, we hope those affected will be few in number.
This is the first cutback in outgoing voice service in over a decade. We hope it will be the last.

(*****

And for this week, that's all from the Amateur Radio Newsline.
You
can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk, we at Newsline say 73 and we thank you for listening.

3363. Re: Use of radio on passenger airlines

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-12 00:00:00 UTC
From: Hans Brakob K0HB <71111.260@CompuServe.COM>
Message-ID: <4i4fq0$63l$1@mhadg.production.compuserve.com>
Source record: 229684

>...certification that your (type-accepted, not home brewed)
>transmitter is safe...

Never mind that _amateur_ transmitters, except for HF
amplifiers, are not FCC type-accepted anyhow. (Before you
argue, note that the FCC sticker on your HT relates to
Part 15 certification, not Part 97 type acceptance. It's
a whole different thing.)

--
73, de Hans, K0HB

--Without frequencies, there is no Amateur Radio Service!

>(for free would be nice!)
>
>Regards,
>Andy
>knasinskia@jdpub.com
There is an excellent database maintained by the University of Arkansas
which lists amateur call signs the data base is updated daily from FCC files.
The URL is as follows:

http://www.ualr.edu

Follow the links to the amateur radio page and then to the call sign look-up
screen. Your amateur call book is almost obsolete!!!

Hi, I'm looking at the hamcom data slicer interface and would like
to use it in a program of my own design. Besides the obvious
of polling the data out, what other considerations have to be
made about setting the com port's i/o lines?

I know the op amp is powered by the serial port, so do I have to set
the serial port up in any particular way to power the device? Do
I have to continually toggle the RTS?

Any info would be helpfull, thanx,

Kev

Well Said!

I sometimes make denigrating remarks about them, and must take responsibility for coining the phrase "Postal Prowess" but we must live and let live. I still think that contest organisers ought to take care, though, that they do not lock out entire bands for entire weekends from non-contest traffic on HF. Some UHF and upwards bands never see a signal except during contests, though.

I suppose a contester/dxer must find my version of amateur radio as mystifying as I find his. What point DO I see in building radios yet almost never having time to use them as I launch myself into the next one ?

Cheers
David

Amen!

Several things come to mind with this call to arms. First is we need
to figure out a way to build the amateur radio community as a
community. The comments expressed here seem to often indicate
that there is a large portion of the amateur radio community that
doesn't welcome or recognize another large portion of the
amateur radio community. Although it is a tired saying it
seems to apply: "United we stand, divided we fall." I'm not sure
what's the best way to solve this other than to try and convince
the parties on both sides of the issue that our internal bickering
is more detrimental than almost anything else.

Another obvious issue is how to attract people to these bands
that are relatively unused. From my own perspective, I'm only
active on a number of the VHF+ bands because of the various
contests that are available. With my antenna restrictions I can't
hope to compete in an HF contest, but could potentially compete
in VHF+ contests, especially if I rove as I intend to. But aside from
that activity, in the Chicago area there is little activity on anything
other than 2 meter and 70 cm repeaters when it comes to VHF+.
220 is not particularly well occupied and 903 MHz is *much* less
occupied. 1296 MHz is a little better occupied and above that
it is a handful of experimenters.

Given the spare occupancy of these bands, it is hard to convince
the average amateur to spend the money to get on those bands
as they'll have few people with which they can communicate.
This is probably the primary reason for the code/no-code debate
with respect to HF. An HF station gives one a *VERY* large
population to talk to whereas a 903 MHz station around here might

allow you to talk to under 10 other amateurs.

This suggests to me that one of two things must happen. Either we need to find new uses other than one on one QSOs to use these bands, or we need to drop the price barrier to such a low level that these bands will become better occupied and hence offer the interested amateur more people with which they can communicate.

I'll see what I can come up with for new uses and post that subsequently. As for decreasing the price barrier, perhaps others have good suggestions on how to help there.

73,
Todd

To all radio amateurs

SB QST ARL ARLB011
ARLB011 Vanity calls delayed

ARRL has learned that the FCC may delay until mid-1996 the
announcement of when it plans to open the first gate or gates of the
vanity call sign program. A Commission spokesman says the FCC first
wants to deal with remaining Petitions for Reconsideration it has
received. The FCC had been expected to announce opening dates early
this year.

FCC vanity call sign application Form 610V is now available, but the
FCC will not accept completed forms until it opens the appropriate
filing gates.

Prospective applicants can get the FCC Form 610V package by writing
ARRL, 225 Main Street, Newington, CT 06111. Please include an sase.
Form 610V also is available from the FCC via the Internet at
http://www.fcc.gov/Forms/Form610V or
ftp://ftp.fcc.gov/pub/Forms/Form610V/, or by fax at 202-418-0177.
Ask for Form 006108.

The FCC's Forms Distribution Center also accepts orders for Form
610V at 800-418-3676.

Source record: 229691

Finally, we have someone in this newsgroup with a little bit of common sense. It is a fact that many Ham operators start out on the C.B.. I am personally sick and tired of people saying that CBer's have no brains. The fact of the matter is is that there are many rude and terrible CBer's but there are many nice people on the C.B. bands. I have also heard of Ham operators that make fools of themselves. There is good and bad in both worlds. At one time in my life, I had a desire to become a Ham Operator. But over time, I lost interest. To this day I still love talking on my C.B.. As far as the morse code goes, there is one main reason for having morse code. The main reason is because it takes less time to send than voice. By the time you finish talking to your contact by voice, the other operator could have faded out or he could be having a hard time understanding you. Morse is quick and easier to understand by having a bunch of little dits and dahs rather than trying to understand someone when they are trying to tell you their name. Morse code is more practical to use in some instances rather than using voice. That is my two cents on that subject. I have one last thing to say; why can't yall try to stop arguing over stupid things and try to get along.

Sincerely,

AWall92116@aol.com
"Curly"

3371. ARRL letter

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-12 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <31460E05.4AD9@ccsnet.com>
Source record: 229692

Presented as a kind act towards hams from the beloved K1OIK:

The ARRL Letter
Vol. 15, No. 2
March 8, 1996

INSIDE:

* At Deadline: Hams respond to WI train wreck disaster
* Reward offered in Teetson murders
* FCC drops VEC conflict rules
* Petitions, Telecoms Act hold up vanity call signs
* Stafford appoints DXCC committee
* ATV rocket launch set
* Digital conference set for September in Seattle
* Florida hams help FCC snag unlicensed repeater users
* Twin brothers, twin calls
* Sunspots missing
* In Brief: DF4TR back on Earth; new IOTA address; good news for OK repeater owners; AO-10 coming back; orbital calendars available; Amateur Radio Month in NJ.

At Deadline . . .

* Ham radio operators stepped in to help after a freight train carrying liquid propane derailed early on the morning of March 4 in Weyauwega, Wisconsin. One tanker car exploded, and others caught on fire. As of March 8, six cars carrying liquid propane were burning. Authorities evacuated 1700 residents of the town, west of Appleton in Waupaca County, fearing another explosion. Fire officials say the fire may burn for several days, and residents won't be allowed back in until the fire burns itself out. Among those evacuated were residents of two nursing homes. "The Division of Emergency Government brought us in immediately," said Waupaca County EC Bob Krueger, N9BKF. He reported ARES volunteers from several counties were working in three shifts around the clock to provide communication for emergency response personnel and for the American Red Cross, which has set up two shelters in Waupaca. Krueger said the Amateur Radio network is using a couple of 2-meter repeaters to support communication at the incident command post and the staging area back from the scene. He said ham radio was helping to relieve the burden on the public service communication system and would be available if telephone systems should fail. Hams also were providing health-and-welfare traffic. RACES volunteers were handling long-haul traffic from the scene on 75 meters to the state Division of Emergency Government and the Red Cross in Madison, the state capital. "We've

got a lot of tired people," said Krueger, who's also RACES officer for Waupaca County.

FAMILY OF SLAIN HAM COUPLE OFFERS $10,000 REWARD

The family of Floyd and Winnie Teetson has offered a $10,000 reward for information leading to the arrest and successful prosecution of the couple's killer or killers. Authorities in Louisiana continue their investigation into deaths but apparently have no new leads in the brutal slayings February 21 of former ARRL Delta Director Floyd Teetson, W5MUG, and his wife Winnie, WN5YTR. Newspaper reports quoted a Webster Parish (Louisiana) coroner's investigator as saying he believes the murder was the work of one person. The Teetsons were found slain at their home near Heflin, Louisiana, February 23. Authorities believe the couple died on the evening of February 21. The Webster Parish Sheriff's Department and Louisiana State Police have questioned several individuals, but have made no arrests, according to news reports. The Teetsons' minivan, which had been parked under a carport adjoining a utility shed where the couple's bodies were found, has been taken to a police crime lab. The vehicle's rear hatch was open when police first arrived and discovered the bodies.

A DXpedition group the Teetsons had planned to accompany to Little Cayman Island in the Caribbean used Floyd Teetson's Caymans call sign, ZF2FT, in the couple's memory during the ARRL International DX Contest (SSB) weekend of March 2-3. The ZF2FT crew included the Teetsons' close friend Troy Ballard, W5AU, and Shreveport hams Brian Lewis, N5OCD and Billy Hillman, N5XIQ. "We sure missed Floyd and Winnie down there," Lewis said. Along with their contest exchanges, several operators commented, "This one is for Floyd" and "Floyd and Winnie were good friends," he added. "The Teetsons had lots of ham friends." The team racked up 4,286,520 points in their memorial effort.

Floyd served as ARRL Delta Division director in 1962 and '63. Prior to that, he was the SCM of Mississippi (1960-61). He was an Honor Roll DXer and active contester and had been a member of several multi-op contest teams operating from various Caribbean DX sites. The Teetsons were active ARRL members.

Following funeral services in Heflin February 26, the family held a memorial service March 2 in Madison, Mississippi. Floyd, an electrical engineer, had worked for BellSouth in the Jackson, Mississippi, area before moving to Heflin, Louisiana about six years ago. Winnie had worked as a medical technologist during the couple's years in Mississippi.

Floyd, 74, was a native of Elroy, Wisconsin. His three children from a prior marriage--a son and two daughters--survive him. Winnie, 69, was a native of Heflin, Louisiana. She is survived by her mother, one son and two daughters from a previous marriage, and four sisters.

FCC DROPS VEC CONFLICT-OF-INTEREST RULES

The FCC has formally eliminated conflict-of-interest provisions that had applied to the administration of Amateur Radio exams. The action conforms Part 97 of the rules to the provisions of the Telecommunications Act of 1996, recently signed into law by President Clinton.

The Commission also eliminated a requirement that volunteer examiners and volunteer examiner coordinators maintain records of out-of-pocket expenses and annually certify those expenses to the FCC. The FCC notes that VEs and VECs still may recover actual out-of-pocket costs from examinees. The maximum reimbursement fee is $6.07 for 1996.

The FCC said the rules changes will eliminate "unnecessary regulatory burdens."

The former provisions precluded equipment manufacturers and their employees and anyone who prepares or distributes ham radio license study materials from administering Amateur Radio license examinations. The underlying purpose was to prevent an employee from favoring examinees who had purchased manuals or equipment produced or distributed by the VE or the VE's employer. The FCC has concluded that other rules provisions, combined with current Amateur Radio license examination procedures, will protect against potential abuses.

The FCC notice announcing the rules changes pointed out that Section 97.523 requires VECs to cooperate in maintaining a single question pool for each examination element. As a result, all exam materials and manuals must draw from the standard question pool, which is widely available to the public. Also, the FCC noted, each exam is administered by three VEs and coordinated by a VEC. The Commission said it would be highly unlikely for any examinee to be favored by a VE or VEC.

The FCC said the 12 years of experience with the VEC system has shown that breaches of trust by VECs and VEs can be dealt with swiftly and immediately by disaccrediting the offending VEs or rescinding the VEC agreement.

The FCC adopted the rules changes February 28, 1996. They become effective 30 days after publication in the Federal Register.

PETITIONS, TELECOMS ACT BEHIND VANITY CALL SIGN DELAY

A lack of FCC action on four Petitions for Reconsideration and a flurry of activity to implement the provisions of the newly signed Telecommunications Act of 1996 are among the factors behind the Commission's recently announced delay in the Amateur Radio vanity call sign program. The FCC has said it would wait at least until mid-year to announce when it plans to open the first gate or gates of the long-awaited program. The FCC had been expected to announce opening dates early this year. The deadline to file comments has expired.

Still awaiting FCC action are Petitions for Reconsideration filed last fall by Charnelle H. Summers, W4IJE; David B. Popkin, W2CC; Robert Nelson, on behalf of the Hill Country Amateur Radio Club; and Christine M. Gill, on behalf of the Southern California Repeater and Remote Base Association.

In his petition, Summers asks the FCC to amend the vanity call sign rules to permit survivors of Extra Class licensees to get a late parent's call sign without having to upgrade, but only if the applicant has held an Advanced Class license for at least 25 years and the parent had been dead for more than two years. Summers would like to obtain W4AR, the call sign of his late father, who died in 1991. In its Memorandum and Order, the FCC granted a reconsideration request by Popkin to limit relatives to obtaining the call signs of deceased relatives that were of the same or lower operator class held by the applicant.

Popkin, in his latest petition, wants the FCC to fine tune the wording of the rules to make it clear that if no call signs on an applicant's list of choices is available, the FCC refund the fee and would not classify the original call sign vacated by the applicant as a vanity call sign requiring a fee for future renewals. He also asks that renewal applications be accepted on the license expiration date, not just prior to the date.

The Hill Country Amateur Radio Club of Kerrville, Texas, requests the FCC permit club stations issued licenses after March 24, 1995, to apply for the call sign of a deceased member under Gate 1A. The club's call sign, KC5OJZ, was issued May 5, 1995.

The Southern California Repeater and Remote Base Association petition asserts that in the process of revising the vanity call sign rules, the FCC "unintentionally introduced inequities." The association cites the Commission's denial of an ARRL reconsideration request to limit an applications for a vanity call sign to those available in the applicant's call sign district. The association wants the commission to change the procedures for Gate 1 filings to allow for placing a deceased family member's higher-grade call sign in "reserve" for two years to give an applicant time to upgrade. Both the SCRRBA and Summers expressed concerns that the FCC failed to provide a two-year "upgrade period" as the vanity call sign program commences.

FCC vanity call sign application Form 610V is now available, but the FCC will not accept completed forms until it opens the appropriate filing gates. Prospective applicants can get the FCC Form 610V package by writing ARRL, 225 Main St, Newington, CT 06111. Please include an sase. Form 610V also is available from the FCC via the Internet at http://www.fcc.gov/Forms/Form610V or ftp://ftp.fcc.gov/pub/Forms/Form610V/, or by fax at 202-418-0177. Ask for Form 006108. The FCC's Forms Distribution Center also accepts orders for Form 610V at 800-418-3676.

ARRL PRESIDENT STAFFORD APPOINTS COMMITTEE TO STUDY DXCC

ARRL President Rod Stafford, KB6ZV, has appointed John Kanode, N4MM, to chair a committee to review the entire DXCC Program. The ARRL Board of Directors, at its meeting in Savannah, Georgia, asked President Stafford to name the committee. The panel will recommend changes necessary to "encourage broader participation by more amateurs, make the program more equitable, create better understood criteria for DXCC 'countries,' improve the process of reviewing requests for additions and deletions to the ARRL DXCC List and increase efficiency in the administration of the program."

In any case, there are no plans to scrap the DXCC program, said DXCC Manager Bill Kennamer, K5FUV, one of those named to the committee. "It's too important in the greater scheme of things, internationally," he said.

The committee is unofficially known as the DXCC 2000 Committee, reflecting its goal to have any changes to the DXCC program in place by the year 2000. Kennamer said he does not anticipate restarting the entire DXCC program, as has been suggested. "But we might make certain changes to make it more of a level playing field," he said. Applicable "country" credits from the current DXCC program will continue to count regardless of what other changes may occur.

Also appointed were Larry Price, W4RA; Rick Roderick, K5UR; Jim Maxwell, W6CF; Walt Stinson, WOCP; Garth Hamilton, VE3HO; Bob Winn, W5KNE; Wayne Mills, N7NG; and Chuck Hutchinson, K8CH.

1996 ARRL AND TAPR DIGITAL CONFAB SET

Mark your calendars and make plans now to attend the year's premier Amateur Radio digital communications event. The 1996 ARRL and TAPR Digital Communications Conference is set for September 20-22, 1996, in Seattle, Washington--just minutes from the SeaTac Airport. This marks the first time the ARRL Digital Communications Conference and TAPR Annual General Meeting have joined into one conference. Local sponsors include the Puget Sound Amateur Radio TCP/IP Group and Boeing Employees Amateur Radio Society (BEARS).

This international forum is for hams and experts in digital communications, networking and related technologies to meet, publish their work and present new ideas and techniques for discussion. Presenters and those attending have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications.

Papers are invited for publication in the conference proceedings. Presentation at the conference is not required for publication. Send papers by July 23, 1996 to Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111 USA or via the Internet at lweinberg@arrl.org. Maty has details on format requirements.

ARRL and TAPR especially welcome papers from full-time students to compete for the first annual student papers award. Two $500 travel awards will be present for best technical/theory-oriented paper by a student and for best educational or community-oriented application paper by a student. Papers should relate directly to a wireless digital communication topic. Papers co-authored by educators or telecommunications professionals also are eligible for this award, as long as a student is the first author. First-year awards have been funded through a grant by The ARRL Foundation Inc. The deadline for completed student paper manuscripts is June 11 (please note this date is earlier than the deadline for general papers)

For full details and paper guidelines, contact TAPR (see below) or check http://www.tapr.org on the World Wide Web.

Workshop presentations include Keith Sproul, WU2Z, on APRS packet-location software; Dewayne Hendricks, WA8DZP, on "How to Utilize Part 15 Radios for Ham Applications," and a workshop on Wireless Networking using WA4DSY 56K RF modem technology and its accessories.

For more information on the conference, registration, and hotel reservations, contact TAPR, 8987-309 E Tanque Verde Rd, No. 337, Tucson, AZ 85749-9399, tel 817-383-0000; fax 817-566-2544; e-mail tapr@tapr.org.

ATV ROCKET LAUNCH SET

Amateur Radio plays a role in plans to launch an ATV-carrying rocket from Sheboygan, Wisconsin, nearly 50 miles into the air over Lake Michigan, as part of the Wisconsin Rockets for Schools Project, a program to stimulate interest and excitement in mathematics and science. Some 3000 students, most in grades 6 through 12, are expected to witness the May 4 launch of the 11-foot-long Super Loki sounding rocket that will carry a black-and-white camera, ATV transmitter and radiotelemetry gear aloft. When the rocket reaches its peak altitude, it releases the payload and switches on the equipment automatically, explained Bryan Suits, WB8WKN, of Houghton, Michigan, who's in charge of the ATV payload. Over the next half-hour or so, the payload will descend into Lake Michigan on a Mylar parachute-type device. "One frame of video is 100% success. Anything after that is a bonus," Suits said, but added: "We hope to see the entire descent."

The Rockets for Schools program puts an emphasis on meteorological and environmental monitoring. Forty-five students will participate directly on one of the five teams: Launch, Range Safety, Tracking and Communication, Payload and Recovery.

If it all works, ground-station monitors will see Lake Michigan from aloft. In addition, radiotelemetry equipment will transmit data on battery voltage, internal temperature, external temperature and, possibly, ozone levels in the atmosphere. The camera will be aimed out the side of the payload device, which weighs about 17 lb. The ATV transmitter will put out up to 2 W of power on 434 MHz into a simple dipole or quarter-wave (with the metallic case as a counterpoise). Three 3-V lithium batteries will power the equipment. Telemetry and a CW identifier will be carried on the audio subcarrier. A floatation device is to deploy to keep the payload afloat for recovery. Plans to include a GPS unit were scrapped, Suits said.

"It should be quite a show," Suits said of the one-time experimental event. It's believed this will be the first sub-orbital rocket launched from Wisconsin. The first Rockets for Schools launch was in Florida in 1993.

The ambitious educational project must comply not just with local and federal laws but with the laws of physics as well. Just for the Amateur Radio component, Suits--a physics professor at Michigan Technological University--has found the demands are stringent. Space in the payload is very tight: it measures approximately 1.6 inches in diameter by 1 foot long. In addition, the launch will impose some 100 g of force and temperatures could rise briefly into the region of 250? C. Suits says he's done some ATV work on the ground but "never anything this ambitious" before.

Prior to the rocket launch, Near Space Sciences, a group involved with the rocket launch, will send up a balloon with an amateur crossband repeater, color ATV system and GPS. The equipment on the balloon will facilitate communication between the launch site and outlying areas.

The project had obtained approvals from the FAA, the EPA, the US Coast Guard and "a whole pile of local authorities," Suits said. ARRL General Counsel Chris Imlay, N3AKD, is helping with FCC notifications and approvals required for operation above 50 km (approximately 31 miles) altitude.

FLORIDA HAMS, FCC CLIP UNLICENSED LAWNMOWER MEN

What started out sounding like intermod from a lawn service company on a Sarasota, Florida, Amateur Radio repeater (W4IE/R, 146.91 MHz) in mid-February turned into a three-week-long ordeal involving the FCC and a lot of legwork by the Sarasota Amateur Radio Association, the repeater's sponsor. The intermod turned out to be bootlegging, and club members logged and transcribed transmissions by several people using false call signs--including phone-patch calls.

After about a week, the FCC's Tampa, Florida, office was called in. Initially, the FCC was reluctant to deal with the problem, but after club officials called the FCC's Wireless Telecommunications Bureau in Washington, D.C., the problem was handled quickly. By month's end, the field engineer-in-charge told the Sarasota hams who had done the tracking that they would be in the area that day.

On the afternoon of February 27, the FCC told the hams that they had established a "fingerprint" of the offenders' transmitter and--as a bonus--also had identified two other individuals who had been making rude noises on the repeater! In the joint effort that ensued, FCC field personnel and the Sarasota hams physically located and observed the perpetrators that same day. That evening, FCC personnel called at the home of the owner of the lawn service whose workers had been using the W4IE repeater. The FCC stated the owner was "very cooperative," and several radios and the employees involved were rounded up. Club members later learned that charges were filed against the lawn service and the involved employees.--KF4DMP, Sarasota Amateur Radio Association Amplifier

TWIN BROTHERS, TWIN CALL SIGNS

Floyd Bumpus is N5EL. His identical twin, Lloyd Bumpus, is N6EL. How'd they do that?! Well, it was just good timing.

In 1977, when the FCC allowed Extra Class licensees to apply for special call signs, Floyd was K5OKQ, and Lloyd was W6PXB (ex-K5ELY). They wrote a joint letter to the FCC and each sent a Form 610. On the same day, April 2, they received N5EL and N6EL. "Keeping up with current affairs concerning Amateur Radio through QST and other publications allowed us to be at the right place at the right time," said Floyd.

The twins got interested in ham radio near the end of World War II, when their oldest brother was captured by the German Army in the Battle of the Bulge. The War Department sent a "missing-in-action" telegram to the family.

A few months later, they received a postcard from a ham radio operator in New York City saying he'd intercepted a message from a German station giving a list of names of prisoners of war being sent to a certain prison camp. The brother's name was on the list. "We had not received any information until this time about the welfare of our brother," Floyd recalled. "Within a few weeks we received a form card from him saying he was at the prison camp as had been noted on the postcard from the ham operator."

Eventually their brother was liberated, and Lloyd and Floyd joined the US Navy, serving together. Lloyd became a radio op and stayed 22 years, while Floyd got out after 4. In 1956, Lloyd--stationed in Asmara, Eritrea, at the time--made a phone patch to Floyd via Dick Freeling, W5TIZ, an A-1 Operator from Little Rock, Arkansas, who was completely blind. That's when the twins really got interested in the hobby and have since enjoyed QSOs with each other from all over the world.

"Amateur Radio has a special place in our lives, and I sincerely hope all operators can enjoy our hobby as much as we have. We are both very active in promoting Amateur Radio," Floyd said.--Rosalie White, WA1STO

SUNSPOTS TURN UP MISSING

Keep those low-band antennas up! Solar seer Tad Cook, KT7H, reports solar activity continues to be extremely low, with extended periods of no sunspots at all. "It looks like 1996 will certainly be the year of the quiet sun for cycle 22," said Cook. Current projections show the sunspot minima (ie, numbers of sunspots observed) will occur this year, with the minimum solar flux still a year off. After the minimum, activity should begin to move upward rapidly, and even 10 meters could be exciting again in a few years, he said.

Current 80 and 160-meter conditions are good, especially with the quiet geomagnetic conditions we are experiencing. Conditions on the higher bands should improve soon because of seasonal variations as we head into spring, and not because of solar activity.

Flux levels should be back up to 75 by the third week of March, after leveling off around 70 earlier in the month. Quiet geomagnetic conditions should prevail, but some moderate disturbances are possible March 10, 11 and 23.

In Brief . . .

* German cosmonaut Thomas Reiter, DF4TR, is back on Earth. Reiter ended the longest European Space Agency manned mission February 29 with the successful landing of the Soyuz TM-22 spacecraft. Reiter and Russian cosmonauts Yuri Gidzenko and Sergei Avdeev had been aboard the Mir orbital complex since September 1995. Reiter, who's 37, has entered the record books as the first ESA astronaut to perform a spacewalk and the first European to make a second walk in space. At 180 days, his mission is the longest by a non-Russian.--AMSAT News Service.

* The RSGB has a new address to mail Islands on the Air (IOTA) program inquiries and administrative correspondence. The RSGB emphasizes this address should not be used for QSL checking or IOTA award applications. The address is: RSGB IOTA Programme, PO Box 9, Potters Bar, Herts EN6 3RH, England. RSGB says all other correspondence should be directed to the authorized checkpoints.
Good news for repeater operators with autopatch lines in Oklahoma's Southwestern Bell service area. Repeater owners now pay residential rates instead of commercial rates for telephone service to ham clubs' autopatch sites.

* OSCAR-10 may be coming back to life. Reports indicate the satellite's transponder is putting out a beacon tone and that the downlink has been functional. The spacecraft has been plagued by low levels of solar energy on its panels. Meanwhile, RS-12 apparently is offering strong signals via its newly activated 2-meter downlink on Mode KT. The uplink passband is 21.21-21.25 MHz; the 2-meter downlink passband is 145.91-145.95 MHz.

* ARRL publishes monthly orbital calendars, which include equator crossings for many popular amateur satellites and the Mir Space Station Complex. These data are helpful for those who manually track satellites. To get a copy, send a 4x9-inch SASE with two units of First-Class postage each month to Technical Department (ORBITS), ARRL, 225 Main St, Newington, CT 06111.

* June will be Amateur Radio Month in New Jersey, according to a proclamation by Gov. Whitman. The occasion is the 80th anniversary of the South Jersey Radio Association, which may be the oldest ham radio club in the US.

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111, tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Electronic edition circulation/address changes, Kathy Capodicasa, kcapodicasa@arrl.org.
Printed edition circulation, Mark Dzamba, 860-594-0253.
Editorial, Rick Lindquist, Assistant Technical Editor, rlindquist@arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

We're shooting for IRS 501(c)(3) status this year for our County RACES unit (since government funding has been reduced to less than $0) and I was wondering if any other RACES units that have gone through it and survived would care to share their experiences. I think I might be able to wade through the forms after a coupla hundred thousand hours, but right now, I'm not even sure of step one: what form should we take? Officially, the RACES unit is sort of kind of a pseudo branch of our County's OES authorized by 47 CFR 97-E and County policy, so we can't really "incorporate" it. I think the way I've seen it done most often is to incorporate a foundation whose sole purpose in life is to accept income, make purchases and hold property on behalf of the RACES unit, no?

I'm sure I've got other questions; if you care to correspond via e-mail, I'll be happy to post a summary after it's all over.

Thanks! 73 de Rob WM8S

Greetings from Texas,

I have been a ham for about 8 years or so. I have mostly concentrated on HF, with DXCC, WAS, and WAZ. I have been thrilled with 'twisting the dials' as long as I can remember. However, the internet has a lot of promise for me. After very little activity on the ham bands for awhile (I was on IRC, and I-Phone a lot) I thought I would give the ol' 20 meter band a try. Within a few minutes I was interupted with carriers, (after I was using the freq for several minutes), 2 w's started a QSO with each other right on top of myself and the station I was in QSO with - they were 59 ++ so I know they could hear me. I could not even carry on a conversation because of the above and I moved freqs only to experience the same thing again. I know this is not always the case, but it seems to me it is more and more the case.

I have been told that I can't use DX nets for DX (my true love) because 'no REAL Dx'er uses nets.' The 14.195 language on a major DX'pedition is almost unbearable to me (and the rude ones seem to be the stateside ops). Every few seconds someone is screaming 'who is on' 'where they listening' and the 14.195 policeman is another thing altogether. It seems ham radio has gotten 'different' than what I remember when I started (only 8 years ago).

I suppose the internet has its problems too, but so far I have found a lot of friendly people. (There are the flamers too!). Bottom line for me is that the intrique of radio will always be there for me, but the internet has very interesting possibilities. I hope common courtesy becomes more common on the ham bands.

Thats my .02 worth,

73 de N5PHT

>SOS is like BT etc. so in my book it would be a prosign.<

"Prosign" is actually the abbreviation of "Procedural Signal",
so I guess I wouldn't classify SOS as a prosign, even though
sent without inter-character spaces.

Whatever our opinion, I guess we all would pay attention if
we heard it, and not spend too much time deciding if it
qualified as a prosign, 3 separate characters, or whatever!

Both is interesting. But HF conditions are related to nature (the ionosphere)
and thereby becomes quite a different thing, for one thing its
inpredictability, which gives it another thrilling dimension.

Internet gives fast and secure information from a lot of various sources.

And, perhaps all QSL cards will be send through Internet in the future.

I bet that security would be better having a bunch of hams around able to
communicate. Denying (sp?) communications is no way to increase security.
If security is that big of a problem, I won't go!

>2. Uncontrolled news releases or reports about events.

This implies that there are no pay phones. Could be a real bummer.

>3. QRM
QRM is already covered by FCC regs.

I am not sure how this could even be enforced. Some of the new
ht's are so small and have so little metal in them they would
be easy to walk in with. Take the batteries out of an ICOM w31-a
and give them to one person, give the wire antenna you made with
a bnc to another person, and the third guy gets the ht.....

>practical to use in some instances rather than using voice.

Actually, even good Morse operators can only send at a fraction of
normal speech rate, though heavy use of abbreviations helps for common
text. Usually the rate for proper text will be less than a quarter of
normal speech rate. However, QSK ops can hear the band between code
elements, which can be useful, and code does get through in some cases
when voice modes would have difficulty (but some other digital methods
are even better yet under those conditions). Knowing Morse can be useful,
but no longer useful enough to make it a stand alone test element determining
access to spectrum allowing other modulations. Those are really two separate
issues.

The problem is that they have already bothered us. The FCC made amateur
HF linears bear Type Acceptance because of CBer abuse. That directly
affects every amateur who wants a linear for legal amateur operation.
Further abuse by renegade CBers could lead to further restrictions on
law abiding amateurs, and that would bother us very much.

>hearing well shouldn't be the pat answer!

The deaf driver is acutely aware of his sensory deficit, and has
developed coping strategies in order to compensate for the lack.
The average hearing person has not developed those coping strategies,
so when their hearing is impaired by headsets, they will not drive
as safely as the deaf person. And because they *can* hear, and *are*
listening to something unrelated to their driving, their attention
is divided so that they are not concentrating on their driving the
way a deaf person, undistracted by music or voices, would be.

Now a headset wearing hearing driver *might* develop coping
strategies to deal with the self-imposed sensory deficit, and
a hearing driver *might* be so competent that he can afford
to divide his attention while driving, but that seems unlikely
on average. Hence the laws.

>to comply with all applicable FAA rules"..
>
>Since all commercial aircraft flights operate under IFR all the time,
>regardless of weather, and most likely your station hasn't been checked
>out on that particular aircraft, its against the rules...

The applicable FAR for airborne ops is 91.21. It basically forbids the use of ANY portable electronic device on board any airplane with four specific exceptions and a fifth exception that can be vaugely read to allow other things.

The fifth exception is just that a device can be used if the "operator*" has determined that the device will not interfere with on board systems.

*not the radio operator, but the operator of the aircraft - the airline.

The FAA has offered guidance on 91.21 to the airlines and general aviation in "advisory circular" AC 91.21-1. See the text of the AC if you want to at ftp://ftp.ccnet.com/users/cwheeler/aviation/ac91211.txt

There is no elaborate testing requirement to "certify" portable electronic devices. The operators just have to make a determination that it will not cause interference. There are recommendations for testing but no specific mandates. However in AC 91.21-1, the FAA has told airlines that they should not allow the use of any transmitters on board.

>The primary navigation and landing aids on an aircraft (VOR and ILS)
>operate in the 108-118 MHz range, the vertical guidance (glideslope) is

>about the time you get low, somebody keys his mike, turns on his laptop,
>fires up the cellular, turns on the electric razor, etc... OOPS, aw
>shucks....

Some geewiz info on your examples: The use of cellular telephones on any aircraft while airborne is prohibited by FCC rules (22.925) - there is no need for an FAR on that. Electric razors are one of the PEDs that are specifcally allowed by FAR 91.21 in addition to hearing aids, pacemakers and portable voice recorders.

>The possibilities for interference are endless, and all commercial
>aircraft are thoroughly checked BEFORE critical use to make sure they
>don't have any spooks...

Do you want to use packet radio to send messages to your non-packet friends or even to your non-amateur friends? You can - by sending NTS (National Traffic System) messages. The article at the URL below explains how to do it.

Article URL: http://www.idir.net/~medcalf/ztx/nts.html

From the home page at http://www.idir.net/~medcalf/ztx/ you can link to other articles mostly about digital modes. The articles may be reprinted in amateur radio club newsletters provided that credit is given to the author.

The site also contains diagrams for wiring radios to tncs.

>aircraft.

There is no requirement for aircraft operators to "certify" any portable electronic devices. They are just required to make a determination that the device will not cause interference.

>The operator is the *carrier*, IE Delta. And the certification
>was required for the *particular* aircraft tail number, not just for
>the aircraft *type*. That meant the carrier had to pull the aircraft
>out of service for up to half a day to do the certification, and
>none of them would do that, so none of them would give you permission
>to use the radio. Now they can't even do that, the new FARs don't
>even give them the option to test and certify.

I believe you maybe confusing the requirements for installing equipment with using portable devices. An installation on a aircraft would require certification.

>Now for private or charter operations, the PIC could give you permission
>provided he was operating under VFR rules at the time. And he still can.
>So if you're flying in a non-scheduled puddle jumper, just ask the PIC
>if you can use the radio. If he says yes, you're cool.

As part 91 PIC, I *could* allow the use of a ham transmitter under IFR if I determine that it will not cause interference with the communications or navigation systems. The device would then comply with FAR 91.21. But this is not the way a part 135 or 121 carrier will/should deal with the issue.

A simple low buck solution is the Ramsey FM-25 Stereo Transmitter. Kit is 129.95 rock stable (synthesized from a Crystal source). Put a Cd Changer on the input and you have a system that can cover an area abt 1/4 mi. in radius. Ramsey Electronics 1-800-446-2295 Good Luck! (I installed one for a ski resort here to cover their lodge area... Works great!)

On our clubs weekly 2M phone net I mentioned that
I was interested on getting some information about QRP.
Well, a few weeks later I received the clubs news letter
with a schedule of up comming topics for the monthly
club meeting. I was listed as the main presenter
for May's meeting on the topic of QRP.

I know close to nothing about it - that's why I was
asking questions!

If anyone has any good ideas for such a talk I would
appreciate your help.

Without a clue,

Tim Nagle

> neighbor's house, then claims they have a right to be there because
> they're talking.

If the airwaves are public, it seems more like someone who walks into a public park and begins speaking for anyone who will listen, and is then told not to speak because they're distracting attention from someone elsewhere in the park who paid the gov't a hefty fee for the "right" to speak in that public place. Of course, there's only so much space in the park, but if there's unused space available the "trespassing" analogy begins to fall apart.

In article <1996Mar12.163622.16132@ke4zv.atl.ga.us>,
Gary Coffman <gary@ke4zv.atl.ga.us> wrote:
>Yacomwood doesn't offer turnkey solutions above 1.2 GHz, so we can't
>just burn the plastic to occupy this spectrum. But the equipment isn't
>hard to convert or build, its available, and just waiting for us to
>heat up a soldering iron, fire up the mill, spin up the lathe, or
>grab a file and start to work.

Well, *obviously*, the problem is that we don't have enough people in the hobby to get activity on these bands. We keep requiring people to learn those silly outdated modes like CW and that scares off all the technical people who would fill up all these UHF bands if only we'd get these silly CW requirements out of the way.

What's that? There's a no-code Tech license? And there still aren't people experimenting and filling up the VHF/UHF/SHF bands?

Gee, what a bummer.

Pardon my sarcasm, Gary, but here's the fact: most people in radio today (most, not all) want it all handed to them on a china plate, with back-lit LCD panels, at ever-decreasing prices. Scantily clad models fawning over the equipment at trade shows helps, but is optional.

Since we don't use the spectrum, we are going to lose it. It is that simple. And in my opinion, we should lose it, because you're right: it isn't hard to hack equipment to use on those bands, but so few seem wont to break a hint of sweat to make it happen.

We have damn few excuses why these frequencies aren't used. But lo! The HF bands seem quite amply used, and there is that nasty, outdated code requirement for people to be able to use these frequencies.

So the thinking as to how to get the UHF frequencies in use is not working. All the people who keep yammering and bleating that the code barrier is the threat to amateur frequency allocations because it poses a barrier to getting technical people into the hobby can sit down and re-think their position. The problem of getting more activity on the UHF bands has been around since the technician license was implemented. Remember when the Tech first went in? Why was it instituted? To get more activity on the high bands. Which it did -- as long as there were appliances for the bands in question.

Then along comes the no-code Tech. And we have more activity; but again, only on the bands for which there are appliances.

Now the threat to the UHF and SHF bands is greater than ever has been, and the code issue isn't there. The no-code Tech license test is hardly what I would call a challenge to any EE who can read a 50-page summary of the regulations and band plans. The cost of parts is cheaper and they are more available then ever before, test equipment for the frequencies in question is available in surplus at prices heretofor only dreamed of, and yet, I can tune across the low end of 432 and hear.... silence.

And not to let the pro-code proponents slide by without their due: the idea that the code test(s) are a barrier to keeping out the riff-raff is proven false, time and again. When I tune across the HF phone bands recently, I can't help but wonder what happened to the ham community to allow these sorts of lids (yes, there is a word we don't hear often anymore) to continue operating.

Quite frankly, what is really at issue in the ham radio hobby has little to do with whether we have code tests or cheap appliances available for unused bands, but that would get me up on a soapbox for megs worth of typing.

Hans, Gary, and Todd have posted articles on the subject of occupying the upper regions of the amateur spectrum. Nice thread Hans. In reply:

Oscar 13D will be an exciting addition to the tools we have within our reach on UHF+ frequencies. The problem with the current link frequencies (and satellite down-link power) is that the requisite antennas are very large, and the radios are very expensive. From what I understand, the new Oscar will have links on 1.2 GHz and 2.4 GHz as well as 2 m and 440 (and others), and will have greater power output. These new prospects for DX above 30 MHZ should raise the excitement level a bit.

This, coupled with the fact that, out here in California at least, HOA's are now required by state law to allow the installation of the smaller types of satellite dishes! So what if it's got a Yagi in front of it! hi hi We'll be able to get some gain on these upper frequencies without having to use huge arrays of 15 element Yagi antennas, mounted on 1 KB (kilobuck) heavy duty az/el rotators. The smaller antennas _might_ let us get away with a couple of radio shack TV rotators instead. And they are certainly something we can put up without drawing the attention of the FAA.

Let's face it, none of our neighbors really want to live next door to a guy with a 100' tower, mounted with beam antennas for every band. We can't expect government to legislate away this fact. But UHF+/microwave frequencies, their correspondingly small antennas, low power, and the potential for DX without HF privileges looks to me like a good bet for increasing activity in the near future because of it's accessibility. The "band openings" are certainly more predictable.

Satellite DX is do-able now, but it should become easier and less expensive. An increase in the demand for microwave products will eventually lead to an increase in the supply, and then perhaps a decrease in pricing will follow. Once we begin to see the equipment appear in the amateur radio catalogs, it'll be off and running. We need to see more people carrying Mini-Circuits RF modulators, balanced mixers, amplifiers and filters in stock for example, because it's difficult to imagine a whole lot of home brew strip line PC board fabrication being done successfully. At present, most the home-brew projects found in the ARRL handbooks are not very well suited to the needs of a blossoming technology, but we have seen this begin to change.

Until now, the satellite and microwave crowds have each been considered a kind of sub-culture within amateur radio. With the advent of Oscar 13D (let's keep our fingers crossed), perhaps it's time to bring the activities of these very creative groups more into the mainstream. These guys already know how to assemble simple transceivers from off-the-shelf

hybrid components, and have done the ground breaking work. It would seem that since the super high bands are there waiting, and that DX communications on them is becoming a reality, we need to draw up a map and plot a course for amateur radio that will allow more hams to find their way to them.

I'm sure that others can think of more inventive ways of using the upper reaches of the spectrum, but I think that if microwave satellite DX were more accessible to the average ham, it would be a very popular new avenue.

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified section will include Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting will go on-line, in our classified search engine, immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line within 1 hour. I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

: HF, with DXCC, WAS, and WAZ. I have been thrilled with 'twisting the
: dials' as long as I can remember. However, the internet has a lot of
: promise for me. After very little activity on the ham bands for awhile
: (I was on IRC, and I-Phone a lot) I thought I would give the ol' 20 meter
: band a try. Within a few minutes I was interupted with carriers, (after
: I was using the freq for several minutes), 2 w's started a QSO with each
: other right on top of myself and the station I was in QSO with - they
: were 59 ++ so I know they could hear me. I could not even carry on a
: conversation because of the above and I moved freqs only to experience
: the same thing again. I know this is not always the case, but it seems
: to me it is more and more the case.

: I have been told that I can't use DX nets for DX (my true love) because
: 'no REAL Dx'er uses nets.' The 14.195 language on a major DX'pedition is
: almost unbearable to me (and the rude ones seem to be the stateside ops).
: Every few seconds someone is screaming 'who is on' 'where they
: listening' and the 14.195 policeman is another thing altogether. It
: seems ham radio has gotten 'different' than what I remember when I
: started (only 8 years ago).

: I suppose the internet has its problems too, but so far I have found a
: lot of friendly people. (There are the flamers too!). Bottom line for
: me is that the intrique of radio will always be there for me, but the
: internet has very interesting possibilities. I hope common courtesy
: becomes more common on the ham bands.

I tend to agree with others who have said that the rudeness on the air and
on the Net is just a reflection on society itself. On the Net, after a
while I learn who has something worthwhile to say, and who the troublemakers
are. I stay out of advocacy issues, such as code/no-code, because they
waste time and accomplish nothing.

I have heard about the various problems on 75 SSB, and 20 was somewhat of a
mess 20 years ago. Have you considered QRP operation, or using 17 or 30
meters? I have recently gotten into QRP, and really enjoy it. The
operators are much better, and most are true gentlemen, in the sense of
hamming years ago.

Source record: 229623

--I won't include the follow-up messages to my reply. Begging your indulgence however, I will use another analogy.

To me all the fighting to avoid learning cw to gain access to HF priveleges reminds me of a documentary I saw on PBS. It was about a competition where a man alone sails around the world in a wind-powered vessel, racing other men alone for the best finishing time. (Also women, almost forgot!) To complete the competition requires stamina, bravery, luck, and most importantly knowledge and skill.

Obviously, the requirement to play the game is that you must use a sailing vessel only. You must also possess proven sailing skills.

But why bother? Sailing skills are obsolete. Sailing vessels are obsolete. Isn't it unfair to bar those who want to enter, using diesel yachts, from the competition? If you want to enter using a modern diesel yacht, isn't it unfair and archaic to demand that you must possess sailing skills? Hell, you're faster. You can beat those antique windships any day of the week. Ergo, sailing vessels and skills - worthless.

I think that what is misunderstood is that while some things, like cw, may be obsolescent in one sense, they are vital and very viable in another. These skills still have merit and need to be encouraged and protected. If the morse requirement is removed, a language will be lost. If you never have to learn it, you will never use it. If you must learn it, you will then be able to make an enlightened and informed choice.

In Canada, the morse requirement is only 12 wpm for the advanced qualification. It gives you full access to HF at full power. The morse qualification is probably less difficult to attain for some than grasping the advanced technical theory. For others, with post-secondary telecommunications or electronics training, the technical exam is easy to pass, but attaining the 12 wpm code level takes a little effort.

Maybe that's the problem. The effort.

Shane

We may see some of our frequencies re-allocated, but It won't caused by a lack of " headcount" but rather for lack of the need for our services.

Too much competing technology today (GPS, satcom, cellular, etc). I just hope that we can hold on to the HF portion, so that old time radio buffs like myself will still have a place to play with outdated technology!

>thanks!

>--Eugene Kang/wired@alphaque.com

Eugene,

No mod needed for this. Transmit lockout on a busy channel is a land mobile feature. it is turned on or off during the programming of the V-68. It is there to keep users of land mobile radio from keying up all over each other or forved respect for other users on the same frequency. There are also other neat items like penelty timers where one user hogs a system, the radio will apply a penelty time not allowing the user to transmit until the time runs out. this is all done to protect users from themselves.

So you need to look in the programming manual or see the dealer who sold the radio to you for instructions on turning off the trasnmit lockout while busy setting. You could also e-mail ICOM tech Support at 75540.525@compuserve.com, they will want to know what country you are in, they will be able to refer you to a dealer who can help. The V-68 is not dsold for use in the United States as it is not type accepted because it transmits from 136 to 174 Mhz inclusively.

3410. IPS Daily Report - 13 March 96

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-13 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4i7m8s$1be@flare.syd.ips.oz.au>
Source record: 229631
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 MARCH AND FORECAST FOR 14 MARCH - 16 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 12 Mar
Daily Proton Fluence >1 MeV: 3.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.2E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Mar 15 Mar 16 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Mar: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 12 Mar
Learmonth 17 3234 4432
Fredericksburg 16 11
Planetary 18 12

Observed Kp for 12 Mar: 3432 3323

2B. MAGNETIC FORECAST
Date Ap Conditions
14 Mar 15 Unsettled
15 Mar 15 Unsettled
16 Mar 12 Unsettled
COMMENT: Isolated high latitude active conditions can be expected
over the next two days.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
13 Mar Fair-normal Fair-normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
14 Mar Normal Normal Fair-normal
15 Mar Normal Normal Fair-normal
16 Mar Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
13 Mar -11

Observed Australian Regional MUFs:
Darwin: 15-30% depressed with sporadic E observed 10-13UT.
Townsville: 15% depressed until 08UT, then returned to near
predicted monthly values.
Sydney: 15% depressed until 10UT, then returned to near predicted
monthly values with sporadic E observed 16-18UT.
Hobart: 15% depressed until 10UT, then returned to near
predicted monthly values with spread F observed 13-16UT.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
14 Mar 0 near predicted monthly values
15 Mar 5 near predicted monthly values
16 Mar 5 near predicted monthly values
COMMENT: Isolated high latitude depressions can be expected for the
next two days.

I am looking to buy my son a radio. A friend has a old Yeasu FT-101ex,
and I saw a ad for a FT 840. Which is the better radio and why?
Thank you for your time and help. :)

3413. 6.2 Morse Whereabouts?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-13 00:00:00 UTC
From: Brandon DuRette <brandond@mit.edu>
Message-ID: <31467A78.54C56D5@mit.edu>
Source record: 229634

In the HAM-HOWTO faq
(http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html)
there is mention of a program called 6.2 Morse or superiormorse,
a morse-code practice program for Unix. The ftp site that is listed
in this faq (sepftp.stanford.edu) doesn't seem to have this program.

Can anyone direct me to another location where I might find it?

Thanks,
Brandon

3414. wtb: allied, lafayette, and heathkit catalogs

I NEED HELP!!!

I teach code/theory classes for my local club. I have some younger hams who don't yet have access to HF/SW rigs for code practice. In my are there used to be a ham, N9CLL, who did code practice on 2m FM simplex. He's moved and I need help connecting my computer to a Yaesu FT2200. He used SuperMorse and a similar rig. I'm told the circuit needed includes an audio transformer from Radio Shack but that's about it. I'm not sure how to wire it up. Help would be greatly appreciated.

>little to do with whether we have code tests or cheap appliances
>available for unused bands,

You are both right, but I think perhaps you're missing the big picture
(or at least haven't posted it in my presence). ;)

Authorization of the Amateur Radio service initially resulted from the
government's concept that broadcasting should fall into two broad
categories; public good and private profit. Since that time, these
two categories have often been mixed in the same service, but the
criteria (or at least their namesakes) continue to remain distinctly
separate as the definitions by which government justifies and
restricts the allocation of frequencies.

Over the years, the government's role as caretaker of frequencies, and
its refusal to transfer legitimate title of same to private citizens,
has fostered an image that the government, somehow, owns the spectrum.
The simple fact is, it doesn't, and all precedents for such a belief
derive from philosophies foreign to the Constitution and which the
government otherwise claims to denounce.

Spectrum is a national resource, no different than land, minerals,
water, or any other naturally-occuring element that can be made useful
and profitable through intelligent human intervention. However, the
government, through the F.C.C., has for so long controlled spectrum
without following through on its obligation to allocate it to private
citizens as property, that Congress now assumes it has the right to
sell or lease this resource.

Thus, we are entering an era in which government, for its own
collective purpose, wishes to capitalize on the sale of spectrum in a
manner contrary to its own espoused philosophies of social good. This
action is entirely illegitimate, if for no other reason than that it
defies the same rules of ownership to which government holds private
citizens, and to which we hold each other. Nevertheless, it must be
noted that the emphasis which determines frequency allocations,
divided between public good and private profit, has changed. More
accurately, the definition of public good has been revised to suit

the latest needs of government.

Even if one disputes the government's right to sell what it doesn't own, and even if one understands that public good is merely a catch-all phrase used by government for its own impowerment, all of this must be taken at face value and well-addressed in order to justify the use of Amateur Radio spectrum.

Therefore, I invite anyone to describe and explain the specific benefits which the public derives from our service. Whether it be international good will, training, advancement of the art, emergency preparedness or bolstering the Japanese economy, someone must be able to demonstrate that each specific concept indeed qualifies as a valid benefit, and that the degree to which we provide it is neither unnecessary nor obsolete. Further, such a demonstration must be presented in a way that explains why a similar benefit could not be implemented by a profitable, commercial service that is willing to pay government for use of the spectrum.

As was mentioned in another post, there is something to be said for our efforts to utilize as many of the assigned frequencies as possible, in order to continue to hold these priveleges. However, the issue has already arrived at a point where use alone is not enough, and such a philosophy is likely to merely disarm the Amateur community in dealing with the more important task. Congress now demands that occupation of most frequencies be at the user's expense and to the government's financial benefit. Do we have an answer?

I for one strongly disagree with the government's assertion that it has a right to control property it doesn't own, and to which no one holds title. Nevertheless, this is the illogic of the issues that will ultimately determine the fate of the Amateur Radio service.

73,
Jack WB3U

This sentence strongly suggests a prejudice - you seem to think that
all the fuss over the CW requirement is being made by people that want
to avoid learning CW.

Believe it or not, there are people that want to eliminate or replace
the CW requirements because we think the requirement is no longer
of significant value to the licensing process. Look up my callsign
and check the license class; you'll see that I have nothing to gain
by eliminating the CW requirement. Then, look up Phil Karn (KA9Q),
Gary Coffman (KE4ZV), ...

...

> Maybe that's the problem. The effort.

No, that's demonstrably not the problem.

>220 is not particularly well occupied and 903 MHz is *much* less
>occupied. 1296 MHz is a little better occupied and above that
>it is a handful of experimenters. [...]

And Chicagoland is a major metro center. I live in DO34 (look it up
:). I'm lucky to be able to talk to 2 or 3 other stations on 2m
simplex, even with 18 dBd of yagis and an 85' tower. Above that it's
absolutely zilch. That's IF you're talking terrestrial simplex.

What if we could get a whole crowd of 70cm/23cm split fm repeaters
into orbit? That would let people with fairly pedestrian gear work a
much larger potential pool of other amateurs, and gets around the
"which came first, the chicken or the egg" problem. Then you can
count on occupation pressure to drive them into the second generation
of 23cm/12cm machines, and so on.

Could some clever person comment on how severe the doppler problem
would be?

ARLB016 NY Section changes

The ARRL Executive Committee has voted unanimously to transfer
Herkimer and Otsego Counties of New York from the Northern New York
Section to the Western New York Section, effective April 1, 1996.
The decision was based on the results of a canvass of affected
members which clearly favored the return of those counties to the
Western New York Section.

SB DX ARL ARLD015
ARLD015 DX news

This week's bulletin was made possible with info provided by Seiji, JH6RTO, Joe, NJ1Q, Mauro, I1JQJ, Tedd, KB8NW, Bob, WB2DIN, Joe, N1OCS, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

CROZET ISLAND, FT. FT5WE was on last weekend between 1400 and 1700z on 7005 kHz. Also check 30 meters. QSL via F5GTW direct.

GALAPAGOS ISLANDS, HC8. JF1MGI, a doctor of veterinary medicine, is involved in animal research through the end of March. Hamming will be during non-work hours, though behavior of operators calling in pile ups will determine whether on-the-air animal research will be necessary. At bulletin time no call sign info was available. Meanwhile, HC8/DL5XX has been on 7003 kHz at 0400z and 14025 kHz at 1251z.

SVALBARD, JW. Erik, SM0AGD, and John, SM0DJZ, will be on the air March 14 to 18, mainly on 80, 40 and 30 meter CW, though some RS-12, SSB and RTTY will be worked, including the BARTG Contest. Listen for them signing JW/home calls. QSL via 1996 CBA's for home calls.

MARIANA ISLANDS, KH0. A business trip allows Jun, JH4RHF, to operate as KH2S/KH0 until March 18. Check 80 and 40 meters from 1000 to 1600z. QSL via JH4RHF. Allen, KN6AH, will sign KH0/KN6AH March 15 to 30. Check 40 and 15 meters as well as 20 meter nets. QSL direct only to KN6AH.

GUAM, KH2. JH6RTO will sign AH0AV/KH2 April 11 to 14, concentrating on 10 and 17 meters. He will be in the JIDX Contest. QSL via JH6RTO.

GUINEA BISSAU, J5. The operation from Majo Island, IOTA AF-020, by I4LCK and IK4SDY is slated for March 27 to April 6. Calls will be

J56CK and J56DY, respectively. Besides CW, SSB and some RTTY, they plan to be in the CQ WW WPX Contest March 30 and 31. QSL via home calls.

SUDAN, ST. Claus, ex 9G1AP and 9N1AP, is signing ST1AP as was heard on 14178 kHz at 2215z. Also check the MAR net at 0745z on 14332 kHz.

GHANA, 9G. Joe, N1OCS, is in Navrongo until March 24 on business. He hopes to be able to operate, though no call sign or QSL route was available at bulletin time. Check for Joe around 1819, 3525, 7025, 10105, 14025, 18025, 21025, 24895 and 28025 kHz on CW, and 1845, 3795, 7065, 14195, 18145, 21295, 24945 and 28495 kHz on SSB.

MADAGASCAR, 5R. Gerard, F2JD, has received his license, 5R8EN. He will be in Madagascar until September. He was on 21019 kHz at 0905z this past weekend. QSL via F6AJA.

TRINDADE ISLAND, PY0. Mendonca, PY1UP, will be signing PY0TI until mid-June. He is active on all bands with CW and SSB with a modest set up. QSL direct to PY1UP.

SOUTHERN COOK ISLANDS, ZK1. Bruce, AA8U, Stanley, K8MJZ, and Marilyn, AG8W, plan to enter the IARU Radiosport Contest in July as ZK1AAU from Rarotonga. Their stay will be from July 11 to 20 and they will concentrate on 160 and 80 meters outside of contest hours as ZK1MJZ and ZK1AGW. QSL via AA8U with SASE.

QSL BUREAU NEWS. The Pennsylvania DX Association has assumed responsibilities of the Third Call Area Incoming QSL Bureau. The new W3 Incoming Bureau address is c/o the Pennsylvania DX Association, PO Box 100, York Haven PA 17370-0100. Envelopes and cards on file at the old W3 bureau will be transferred to the new bureau staff.

THIS WEEKEND ON THE RADIO. The Bermuda Contest, Russian DX Contest and the Virginia QSO Party should provide plenty of radio activity this weekend. See page 97 in March QST for more info on these events.

If you think ham radio is different now, after starting into it only 8 years ago, you should interact with it from my point of view. I started in 1968!

Seems we have spawned a whole new breed of inconsiderate, uncouth jerks! Those of you who fit this description, I'm talking to you! If you try to ruin it for everyone else, then you are just ruining it for yourself!

Sort of like tailgaters and other assorted "traffic jerks", of which, BTW, we are seeing more than our fair share these days. By being inconsiderate, you just make things worse for everyone including yourself.

For this radio thing to work out, can't we all practice some manners?

I own a cheap General Electric boombox (about a $100 in value) that is a few years old. It works well but when I am on a certain FM channel listening to my favourite station, I intermittenly pickup actual radio transmissions from overhead commercial airliners. These are actual commercial airline communiques to the tower and back. I know it is because the pilot states the airline and other info. like heading and other number jumbo stuff. This is a simple radio with no short wave or any extra bells or whistles and it works well except for the fact that every so often it interupts the music and I hear aircraft communication messages. Does anyone have any idea what causes this? I thought Commerical Airline bands were totally different and not even close to the FM bands.

Thanks greatly!

Peter

In defense of my advice, Jack, I'd note that I was offering a range
of options. I did not mean to imply that one would have to exercise
them all. I think that, unless foot mobile operation is a high priority,
a person on a budget should not buy a HT as their only rig. If only one
rig can be afforded, then I'd recomend a mobile rig with a quick disconnect
mounting bracket. Add a 12 volt power supply in the house, and you have
your operations covered with a good rig for little if any more than you'd
spend for a HT and the accessories you'd need to make it function in multiple
roles.

I also don't think that things are advancing much these days with
respect to 2m FM rigs. A 5 year old radio that you can buy for
$125 is likely to be able to communicate as effectively as the
newest whizz bang Gameboy. Most of the "advances" are in things
not directly related to amateur radio usage (wide out of band
coverage, scanning, etc).

Planning a trip down under this summer? Here's your chance to take part in a world-class foxhunt on your trip. The IARU Region 3 Amateur Radio Direction Finding (ARDF) championships will be held in Townsville, Australia from July 15 to 20, 1996. Townsville is on the eastern coast of Queensland, about 1000 miles north of Sydney. Separate contests on separate days will be staged on two meters and ten meters. Each will be an all-on-foot event with five foxes on a multi-kilometer course under IARU rules. Hunters from Australia, Japan, China, Korea, New Zealand, Bulgaria, and Kazakh will be competing, and perhaps from other countries, too.

I am working with IARU Region 2 officials to assemble a team to represent North America (USA, Canada, and Mexico) at this event. If you are interested in participating, please contact me immediately. I will put you on a list to receive further information.

Please pass this information to other T-hunters in your area. Time is of essence, as travel arrangements must be begun shortly.

Contests are run by the ARRL. Licensing is done by government. The
two activities have different purposes. The government licenses operators
in order to satisfy the public's interest in "safety, necessity, and
convienence", not to satisfy some gaming requirement. To get back to
your sailing analogy, the government isn't the yachting club, the
government's interest is in regulating the usage of the waterway.

Those who wish to operate bass boats don't have to give a practical
demonstration of sail handling in order to do so, and those wishing
to operate unlimited hydroplanes don't have to demonstrate rigging
fishing tackle. The reason that they don't have to do that is because
such demonstrations would be *irrelevant* to the government's purpose
in licensing. Instead, operators have to show a common understanding
of the rules of the road, a common understanding of what is required
for a boat to be seaworthy, and perhaps demonstrate a competence in
water safety, pollution control, and routine operation of the type of
craft they will be operating.

> I think that what is misunderstood is that while some things, like cw, may

> If the morse requirement is removed, a language will be lost. If you
> never have to learn it, you will never use it. If you must learn it,
> you will then be able to make an enlightened and informed choice.

Morse is not a language. It's an encoding of the Roman alphabet, no
different in principle from ASCII. This mischaracterization is at
the root of many of the misconceptions about the role of encoding
in radio communications. This has come about because Morse has
traditionally been decoded by ear, but in principle you can also
decode Baudot or ASCII FSK by ear, and I've met a few people who
can. Most can't, however, because they've seen no need to put in
the man-months of effort required to program the wetware modem to
do so. Machines can do it better. Only with Morse encoding has
the man-months of effort been *mandated* by licensing requirements.
Since machine modes and machine codes perform better than Morse,
this requirement has become an anachronism.

If Morse cannot stand on its own merits without government coercion,
then it has indeed become obsolete, and should be put out of its
misery. If it can stand on its own merits as a viable mode, then
it does not need government coercion to do so. In either case, there
is no place for governmental speed testing as a barrier to access
to spectrum which can be used for other communications modes.

> In Canada, the morse requirement is only 12 wpm for the advanced
> qualification. It gives you full access to HF at full power. The
> morse qualification is probably less difficult to attain for some than

> telecommunications or electronics training, the technical exam is easy
> to pass, but attaining the 12 wpm code level takes a little effort.
>
> Maybe that's the problem. The effort.

Yes that's the problem, demanding effort for effort's sake with no
rationale, and no rational governmental need being satisfied by the
exercise, is illogical and irrational *hazing*, pure and simple. The
purpose of licensing is not to require effort, the purpose of licensing
is to satisfy legitimate governmental regulatory concerns relating to
the public's interest in safe, orderly, and efficient radio communications.

Perhaps there is some rationale for Morse testing of operators intent
on using Morse, but there is certainly no compelling reason to do so
for operators intent on using other modes. And as noted above, Morse
knowledge and usage are self-regulating, IE to do Morse, you must learn
Morse, test or no test, and if you aren't going to use Morse, learning
it serves no purpose, so Morse speed testing is thus either redundant or
superfluous. And in either case, it is not a legitimate governmental
concern. Let the yacht club enforce its own gaming conditions on
competitors. That's not the government's role.

For the past 2 years I have been compiling what I believe to be one of the largest
databases of radio mods around... I have written an excellent front end program
to assist in searching... Every year I offer this collection entitled
N2RWE's Amateur Radio Modification Database for sale usually for $15...
As of today v4.15 is in beta right now, and the database contains over 600 mods,
and ove 100 service bulletins and it's growing! I have another 150 files to
add yet, information will be posted when it's finished in about a month.
In the meantime for the one looking for the HR-2600 mods, there are several
although I cannot guarantee the accuracy or reliability since I have only
tested a few on the equip that I own... Here's one for extended coverage:

A reliable source recently informed me that the new Uniden HR-2600 10M rig
may be modified for "expanded" frequency coverage using the same technique as
is done for it's predecessor, the HR-2510. (Pins 34 & 35 of the cpu lifted
from ground and tied to vcc/4v via a 10k resistor n the foil side of the pcb)
This area of the board is sealed in epoxy and very careful work with a x-acto
knife is required or you will lift the traces off of the board along with the
epoxy. Freq coverage will be the same as for the 2510.

George, WA2RCB

Hope this helps,

Steve - N2RWE

Yah, and there's a reason why few are willing to bother. Simply, amateurs
have little use for those bands. Really - what I'm I gonna do on 10 GHz
besides send a few contest beeps to another hilltop? No use = no interest. I
suppose I could set up a high speed data link with my friend in the next town,
but I have no use for such a thing. I haven't even turned on my PC in weeks.

>We have damn few excuses why these frequencies aren't used. But lo! The HF
>bands seem quite amply used, and there is that nasty, outdated code

Yup. I have somewhat limited money to spend on radio "toys", so I spend it
where my interests are. HF and 2m/70cm for local stuff. I'm trying to get us
(wife is a ham, too) going on 6m by modifying ancient commercial VHF-low
radios. That's on the back burner for now, until I get all the parts together.

They are indeed still in bussiness. There product is a good one too.
That same chip works in the HR-2510, HR-2600 and the CB radio known
as the Lincoln. Which is the same radio anyway. Cost is about
$75 including shipping and the Socket for the microprocessor.
Adds 10 memories per band, has repeater offsets for the 2510,
but doesn't add PL. The 2600 has PL anyway. Also adds many features
to the Mic up Down. This becomes programmable, as does many other
functions.

Hans,

I seem to read an awful lot from you. Mostly opinions and YOUR interpatation
of discussed rules and regs. Many do not agree with you, but you always
proclaim to be correct.

This of course is fine...it is not my aim to attack or flame you, but
simply to ask a question...

Are you posting for yourself, or the ARRL?

Thanks om, & take care. :)

Yeah..."some people" just don't get the joke, do they? Obviously the joke is on you and all the other "holier-than-thou" respondents who have stuffed my mailbox with notes of "you're insensitive" and "you should be ashamed of yourself", etc. The parent note is obviously a S-P-A-M....get it? How often do you see notes written as "Grandfather passed and left two garages full of STUFF"...accompanied by a toll-free 800 number for you to call if you want the STUFF?!

All those years of dits and dahs must have knocked something loose upstairs, Chris.

Well, yes, if you're using stone age equipment. But not everyone has
switched 56 telco lines into their house, and a 56 kb packet link
is pretty snappy. Still, the internet uses T3 (and above) in places,
and few amateurs have gone to that sort of speed yet. The more important
reason for amateur excitement about packet is that the network design
is under the amateur's control, and not under the control of some
corporate provider. Thus the amateur is free to tinker with the network,
learning and experimenting in ways that are impossible with an internet
connection. Then there's the whole field of RF encoding and modulation
techniques that the amateur can explore, none of which are available
to him using a dialup to a internet service provider.

>be on 40m CW.
>

But you are quite right -- each to his own. Far be it from me to
discourage or disparage any one who wishes to use Backpack CW QRP.

On the other hand, what are QRPers doing in the meantime? I hardly
expect that backpack QRP is taking up the majority of their operating
time. It makes for quite a novelty, but that hardly justifies the
continued dependence on just using CW communications when there are so
many other modes that can be used, particularly when the operating
eminates at home, rather than in the boonies.

For that matter, what is wrong with we QRPers that we lack so much in
imagination that digital communications isn't considered on these little
adventures -- consider that my clunky little Model 200 does a nifty job
with a Kam when backpacking. In contradiction to your point, I don't
think that it is so much of a lack of technical capabilities, because
they do indeed exist, but one of imagination. It would seem that instead
of investigating the possiblities, they are rejected out of hand before
they are even tried.

I strongly recommend against giving a talk on a subject you know little or nothing about. It wastes the audience's time, will be embarrassing to you, and will erode the credibility of any talk you give in the future on a topic you do know about. Call the person who schedules the club programs and tell him that you won't do it. He owes you an apology for publicly announcing that you'll give a talk without first getting your permission.

If you want, you might offer to research the topic and give a talk on the order of "here's what I found out about QRP" as a sort of research report. But only after you're ready and have told the club so should they schedule you to give a presentation.

>Will you help?
>

Sure Hans, the question is: " Can a combined effort to retain our existing allocations, or add new ones really influence the ITU? "

If history is any indicator, it seems most likely that the ITU will simply ignore Amateurs, and give the broadcasters *exactly* what they want! The various governments will also standby and let the broadcasters do whatever they want - remember the old allocation of '200m and down'??

The broadcasting industry has a reputation for being as coniving and greedy as any business could ever be. They have lied, cheated, bribed and stolen in their pursuit of spectrum, finally resorting to simply placing stations on frequencies that were allocated to other services. And they have done so with no opposition or punishment from government. That those in government were acting out of vested interests is a matter of public record.

In order to prevent this, we Amateurs must not only band together, we must find a powerful champion INSIDE both government and the ITU. Someone who is willing to understand our need as well as the history that predicates this sort of combined action. Someone who really knows the history and will not bend to the economic incentives that the broadcasters will all too willingly entice any such person with!

What we should be striving for is a set of harmonically-related bands that can be Amateur exclusive allocations worldwide! With guarantees, in writing, that these allocations will *never* be taken away or subtracted from.

Then there is the not-so-little problem of the non-ITU signatory countries.. ..I need only point to the mess that is 40m and thereabouts to illustrate my point. The UN and ITU should bring pressure to bear on these people - whatever works (economic sanctions from the US and Europe might be a good starting point!) until they abandon their non-signatory status and join the rest of the world in acting responsibly towards spectrum management!

Some other targets: Business band radio - still largely FM, non-trunked and underutilized, occupies a great deal of the 30-500 MHz area wastefully. Fixed-Service HF - totally obsolete, no real use of this can possibly be justified, given cellular technology. IMTS - still with us, why?? UHF-TV - another wasteland! Even the heavy-population metro areas seldom have more than 8 stations there, even tho theres room for 70!! Besides, DBS and cable are going to guarantee that this space remains unused. High Seas - a total waste now that most ships carry sat gear! 2-3.5, 4-7, 8-12, 16-21, 22-24MHz plus all those V/UHF frequencies?? Absurd! There arent enough ships in the whole world to justify it! And lastly, there's a matter of those 'experiments' gone awry, like the 220-222 MHz slice that was "SUPPOSED" to have helped to usher in ACSSB...remember? Here again, the forces inside industry screwed the Amateurs out of some space...and they never did with the spectrum what they claimed! These sorts of situations should be eliminated by insisting that the allocation either be used for it's stated purpose or else.

Some things to kickoff the dialog..

3469. Re:14100 KHz Beacons

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-14 00:00:00 UTC
From: jami1@ix.netcom.com
Message-ID: <4i83kj$rmn@cloner4.netcom.com>
Source record: 229580

Here is a copy of an article I wrote a couple of years ago that may be of interest:

INFORMATION
on the
20 Meter NCDXF WORLD BEACON

by Frank "Jamie" Jamison
W5YSM - VK2AIX
Box 65276
Baton Rouge, La. 70896

The worldwide beacon network on 14.100 MHz is one of the most useful sequence of beacons on any HF band. There are nine beacons which transmit
in sequence every 10 minutes. The last minute in each 10-minute sequence
is silent. The complete sequence is as follows:

-NCDXF Beacons and 10-minute sequence-

Minute Call Location

00 4U1UN/B United Nations, New York City
01 W6WX/B Stanford University, CA.
02 KH6O/B Honolulu Community College, HI
03 JA2IGY JARL, Mt. Asama, Japan
04 4X6TU/B Tel Aviv University, Israel
05 OH2B Helsinki Technical Univ.,
Finland
06 CT3B ARRM, Madeira Island
07 ZS6DN/B Transvaal, South Africa
08 LU4AA/B Radio Club Argentina, Buenos
Aires
09 SILENT

The transmitter power of each beacon is varied from 100 watts to 1/10 of a
watt in four steps during every one-minute transmission segment.The transmission starts with QST DE 4U1UN/B (in New York), then four continuous CW tones are sent, for 9 seconds each, at 100, 10, 1 and 1/10
of a watt. Then each beacon signs off at full power (100 watts) before passing on to the next beacon in the sequence.

In order to use the beacon successfully, it is of utmost importance to have your clock set precisely to WWV (UTC). I find it easier to tune

in
and use the beacon here in the USA by starting my listening period on
the
00 minute when 4U1UN/B signs on. Should skip conditions prohibit the
copy
of the NY station, you can usually pick it up in Hawaii or Japan. It
is
also advisable to use an uni-directional antenna such as a vertical
rather
than a directional antenna such as a Yagi or Quad. By using the
uni-directional antenna it is easy to tell in which direction the band
is
open at which time you can switch over to the directional antenna and
point it in the desired direction.

How many times have you sat down at the rig and wondered where the
openings are on the band? This beacon system goes a long way towards
answering that question.

Note: For further information, refer to QST, June 1983, p27.

Abound" -

3470. AM antennas???

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-14 00:00:00 UTC
From: tiburch@halcyon.com
Message-ID: <4i8cb3$jo7@news.halcyon.com>
Source record: 229581

Hi all,
I tried posting this to the rec.audio.opinion group, but unlike most matters in that group :-), I have yet to get any opinions. Does anyone in this group have any advice?

I have severe static-like interference on the low end of the AM band. I have tried the "long wire" AM antenna method and with an antenna 50 feet long the reception still has not improved . What I think I need is a selective AM antenna which will ignore some of the static I am picking up.

I have been looking at the Terk AM FM Q and the Terk PI, as well as the Parsec Model 2000 AM/FM. Has anyone had any experience with these antennas? Have they made a difference in the reduction of AM static that you were getting?

Whew. Glad to hear that. All I have is an HT. Gary started making
me feel bad about that, until he said they are all OK except the
Kenwood. That made me feel REALLY bad, since I own a Kenwood HT :(.

>The only thing I have is Yaesu hand-held. I use it in my motorhome
>with a mag-mount antenna. I have a J-pole in the apartment which
>works just fine. I can hit repeaters 20 and 30 miles away --
>actually one is about 80 miles away.

This has been my experience, little that it is. :) The day after I
got my license, I put a 2M vertical in my attic and ran RG58 down to
the basement where my "Communications Center" is. Hooked up my TH-28A
and started talking to people. Nobody's complained about my signal,
but then, I haven't talked to Gary :).

>I guess it depends on your pocket book. If you can afford it, do
>everything Gary says. I have a limited budget. In my opinion,
>I would sooner get the best hand-held I can and leave it at that.

I agree. I won't be able to afford another radio for some time yet,
so my crummy old Kenwood HT is going to have to suffice. This is a
fun hobby, but if I'm bothering people with my handi-scratchie on a
repeater, I guess I'll have to turn my HT into a scanner <sob> :).

All sarcasm aside, thanks for the info, Gary and Jack. Your input is
very much appreciated!!

>Radio would be at the fore-front in technology like it used to be.

It takes more than time to advance a field like this. Sophisticated equipment, tons of research, and large financial investments are also required. Radio and RF is no longer an infant technology. It is unlikely that hobbyists will ever be on the forefront again.

> Somewhere along the way we've lost our "edge" and I don't see it
>returning any time soon.

It won't. The level of sophistication of the industry pretty well precludes the possibility of major advancements taking place in someone's garage.

As for the other post about justifying the frequencies we use, the simple fact is, we can't. CW and the use of CW for emergency communications and shipboard duty was the last tangible benefit the Amateur Radio Service had to offer. Now it's just a matter of politics, and time.

I predict that shortly after no-code Amateurs gain the privelages, industry will take the frequencies.

From: scanware@sincom.com
Message-ID: <4i9be7$1lk@news.cais.com>
Source record: 229584

If you made a contact with the USS Missouri during their special event
of Sep 1-4, 1995 and have not sent for your QSL...it's NOT too late.
A QSL for every contact was prepared and is waiting for your SASE.

Send your QSL to:

QSL Manager, KG7XD
USS Missouri Project - WW2END
PO Box 1743
Silverdale, WA 98383-1743

You WON'T be disappointed by the card you receive in return.
It is a 'real' collectors classic.

Also, if you missed making your contact...an SASE and your
QSL will still bring you a souvenir card without contact info.

73 to all,

Gene McAvoy / KG7XD
QSL Manager
WW2END

>
>doesn't hurt that Bell South is one of the big corporate sponsors either.
>they're going to provide the communications equipment...therefore, there's
>no need to look outside for other communications systems.

As someone on-site so to speak, let me give potential Olympic
attendees some advice.

Of course leave your radios at home, else I'll be buying them real
cheap at auction after the games. And don't bother trying to bring
your guns to the games either, Ga law forbids them at sporting events,
and I'll visit you in jail after the games if you do. And forget about
bringing an auto to the games, ACOG has placed the ring off limits to
private autos, so you won't be able to drive your car in Atlanta. You'll
have to depend on the woefully inadequate mass transit system or walk
through some of Atlanta's most dangerous neighborhoods at night to
get around. (See note above about leaving your guns at home.) Atlanta's
zone 2 (where the majority of the events will be held) is a very dangerous
place, our State Attorney General commented yesterday that you'd be safer
on the streets of Sarajevo than on the streets of Atlanta after dark. I'll
send flowers to your survivors.

(If your sport is white water kayaking, yachting, archery, the
shooting sports, or you belong to the horsey set, then come on down.
Those events are being held outside Atlanta and should be both
accessable and safe. The new Wolf Creek shooting range is *very*
nice, you'll like it.)

If you must see the Olympics, I suggest you watch them on TV. You'll
have a better view, it'll be cheaper, much safer, and more comfortable
(Atlanta in July has temperatures in the 90s, and the humidity is in
the 90s too). I *live* here, and that's what I'm going to do.

And as a BTW to other Atlanta area folks, Delta just announced
deeply discounted flights *out* of Atlanta during the games.
You might want to take advantage of that. I hear Sarajevo is
nice in July.

> >mike, antenna, etc?

Intermod seems to be better than average, but can still get you. Battery
problems? Not any caused by the radio. I have a hot rod, and I know
people who've used mag-mounts successfully with theirs. I have yet to get
a external speaker/mike, but may do that soon.

> I love mine. It is probably the 6th or 7th HT I have owned and by far
> my favorite.
> It is a nice size, covers the entire Aircraft and commercial VHF
> bands, and just works well.

Yes, I like mine too. However, before you buy make sure the *particular*
FT-11R you buy doesn't have excessive CTCSS modulation. This is a problem
for some series of them, and not others (I am waiting for a service bulletin
from Yeasu). Have someone transmit using the FT-11R with and without the
tone turned on. If you hear a hum, it's too loud (it should be sub-audible
by definition). If you buy the optional CTCSS decode board, you will be
able to adjust the modulation.

> It has a lot of functions and you will simplify your life greatly if
> you spring for the ADMS-1 computor inerface.

Don't do this unless you have a computer! :-) Personally, having a computer
at home would cause more problems than programming my HT.

3479. GB2RS News 17th March 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-14 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <826853334snx@llondel.demon.co.uk>
Source record: 229590
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 17th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Today, the 17th of March, is not only St Patrick's Day, but also EI Activity Day. Stations in the Republic of Ireland are being encouraged to get on the air, so look for plenty of activity from EI stations today.

Now news of three RSGB events to visit:

There is a Zone "A" meeting at the Norbreck Radio, Electronics and Computing Exhibition in Blackpool at 2.30pm today, the 17th. All RSGB members and officials in Zone "A" - the North of England - are invited to attend. Come along and meet your RSGB Liaison Officer as well as the RSGB Council Member for Zone "A", Gordon Adams, G3LEQ.

RSGB headquarters in Potters Bar will be holding another Annual Open Day on Saturday the 4th of May, between 10.00am and 4.00pm. Come along to meet HQ staff, as well as Committee Chairmen and other senior volunteers. See how RadCom is put together, how we send out 3000 items of mail per week, find out how subscriptions and sales orders are processed, and have a guided tour of the headquarters building. You can also operate GB3RS from the HQ shack, visit the National Amateur Radio Museum, and browse through some of the historical and overseas publications in the National Amateur Radio Library. There will also be traders and second hand equipment stalls. For further information, contact Marcia Brimson, 2E1DAY, on 01707 659015.

And an RSGB Regional Open Forum meeting will take place on the 26th of May at Rivenhall Village Hall, Church Road, Rivenhall, Witham, in Essex. RSGB President Peter Sheppard, G4EJP; Executive Vice-President Ian Kyle, GI8AYZ; and Zonal Council member Fred Stewart, G0CSF, will be attending, as well as RSGB Liaison Officers and a representative from the Datacomms Committee. Further details can be obtained from Fred Stewart, G0CSF, whose address is correct in the latest RSGB Call Book.

A new station is now operational in the multiband worldwide beacon network. ZS6DN/B, located 5192 feet ASL near Pretoria in South Africa, transmits for 10 seconds on 14100, 18110, 21150, 24930 and 28200kHz, in sequence. The beacon runs with stepped power of up to 100 watts to a vertical antenna. YV5B in Venezuela and LU4AA in Argentina are already operational on these frequencies, and JA2IGY in Japan is expected to join soon.

The Shuttle Amateur Radio Experiment, or "SAREX", will soon be flying again. Shuttle Mission STS-76 is scheduled to be launched on the 21st of March and land on the 30th. Among those on board will be KC5CKM, N5RAX and KC5ETH who are expected to make scheduled contacts with schools and family members, and have random contacts on 2 metres FM.

This year's International Marconi Day takes place on Saturday the 20th of April, and not on the 14th as stated in the March RadCom. The event is organised by the Cornish Radio Amateur Club and it is anticipated that around 40 stations will be active from locations connected with Marconi's radio experiments all over the world. Further details will be published in the April RadCom, which is due to be posted to RSGB members this week.

"Kidlink '96" takes place on Tuesday, Wednesday and Thursday, the 2nd, 3rd and 4th of May. Schools are invited to put on stations so that youngsters, especially those between the ages of 10 and 15, can use amateur radio to communicate with their peers in this country and overseas. For further details, contact Peter Daly, G0GTE, on 01438 724991.

Now some items from the RSGB HF Contests Committee:

Groups intending to take part in the RSGB's National Field Day contest on the 1st and 2nd of June are reminded that they must register, by sending details of the site to be used to David Hill, G4IQM, by the 9th of April at the latest. For further details see page 4 of the RSGB Contesting Guide, which was published in the September 1995 RadCom.

The RSGB HF Contests Committee will be holding an all-day meeting in mid-April in order to examine the thinking behind all current RSGB HF contests, including the mix of modes in the present range of contests. The committee would welcome the views of any RSGB member, and these will be discussed at the meeting. Input should be addressed to Chris Burbanks, G3SJJ, Chairman of the HFCC, to arrive not later than the 12th of April. Chris's address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet:

From Saumarez Reef in Australia's Coral Sea Islands Territory, VK4FW/9 is planning activity from the 17th of March for about three days, depending on the weather. This is an as-yet unactivated island group for the RSGB Islands on the Air awards, and a new IOTA reference number will be issued as and when the operation takes place.

From Madeira, CT3/PA3GIO/M will be active from about Monday the 18th until the 25th of March, mainly on 10 to 20 metres SSB.

And from the Chausey Isles, near Jersey, F/G3SJJ and F/G3SWH will be active next weekend, the 23rd and 24th of March. Look for them on all bands, 10 to 80 metres, CW only. Chausey counts as EU-039 for the RSGB IOTA awards.

Now news of special event stations:

GB2IEE is on the air this weekend, the 16th and 17th, from the "Fun-Electric Family Technology Day" at the Northgate Arena, Victoria Road, in Chester. The station is being organised by the local branch of the Institution of Electrical Engineers. The exhibition is open to the public on Sunday the 17th from 10.00am to 5.00pm and admission is free.

"National Mills Day" will be on Sunday the 12th of May, when over 300 windmills and watermills throughout the country will be open to the public, some just for that one day. Lucy Worsley from the Society for the Protection of Ancient Buildings has suggested that radio amateurs might like to put special event stations on the air from some of these locations in order to publicise the event. If you or your club would be interested in finding out more, contact Lucy Worsley on 0171 377 1644.

Next the Rally News:

The Norbreck Radio, Electronics and Computing Exhibition takes place today, the 17th of March, at the Norbreck Castle Hotel Exhibition Centre on Queen's Promenade, North Shore, in Blackpool. The event features over 100 trade stands, a bring and buy stand, RSGB book stall and membership information stand and club stands. Doors open at 11.00 am and talk-in is on 2 metres channel S22.

The Pontefract and District Amateur Radio Society rally will take place at the Carleton Community Centre, Carleton, near Pontefract next Sunday the 24th of March. The rally features Morse tests on demand. Doors open at 11.00 am or 10.30 am for disabled visitors, and talk-in will be on 2 metres channel S22. For more details ring 01977 677006.

And the Bournemouth Radio Society Annual Sale takes place at Kinson Community Centre, Pelhams Park, Millhams Road, Kinson, Bournemouth on Sunday the 24th. Doors open at 10.30 am and talk-in will be on 2 metres channel S22. For further details ring 01252 845900.

The Amateur Radio Caravan and Camping Club's next rally will be at Milton Keynes, over the Easter weekend of the 4th to 8th of April. There is no trading at ARCC rallies, but any amateur wishing to attend as a caravanner or tent camper is invited to send an SAE for details and a booking form. Booking forms must be returned at least one week before the event. Write to the membership secretary, Alan Gard, G4LWA, whose address is correct in the RSGB Call Book, or telephone 01462 811208.

Now for the HF contest news:

The Russian DX Contest is taking place this weekend, the 16th and 17th of March, and lasts for 24 hours from 1200 UTC Saturday. The contest is on all bands from 10 to 160 metres, excluding the three WARC bands, on CW and SSB. Brief rules are on page 21 of the March RadCom.

The Bermuda Contest is also taking place this weekend, from 0000 UTC on Saturday the 16th, for 48 hours. This contest is on 80, 40, 20, 15 and 10 metres SSB and CW and brief rules are on page 22 of the March RadCom.

And the BARTG Spring RTTY contest is taking place from 0200 UTC on the 16th of March until 0200 UTC on the 18th. Brief rules can be found on page 22 of the March RadCom.

Next some VHF contest news:

Next Sunday, the 24th of March, the RSGB 70 MHz Fixed Station Contest takes place from 0900 to 1300 UTC. The full rules were published in the RSGB Contesting Guide in the September 1995 RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS:

The period from the 4th to the 10th of March saw solar activity at very low levels and the geomagnetic field at quiet levels. The solar disc remained spotless until the 6th, when two sunspot groups appeared, one either side of the solar equator. On the 7th, both sunspot groups had decayed to become spotless plages. The mean for the period was 12. Solar flux levels varied between 68 and 70 units, with an average of 69. No solar flares were reported. Electron fluence levels were at a moderate level throughout. X-Ray flux levels remained at the minimum level of A1 units each day. The 90-day solar flux average on the 10th was 72 units, one unit down on last week.

Geomagnetic activity remained at "quiet" levels and averaged Ap 7 units. On the 7th, levels were down to Ap 4 units, with the 8 three-hourly Kp indices all at K1. The aa indices, as supplied by the British Geological Survey for the period from the 27th of February to the 4th of March, saw activity at "unsettled" levels. However, on the 2nd levels were down to only 6 nanoTeslas, and the average for the period was 16.5 nanoTeslas, which is K2. Bartel's rotation number 2221 starts on Tuesday the 19th. The mean monthly sunspot number for February 1996 was 4.4, with a maximum of 17 on the 24th. The minimum of zero was from the 4th to the 14th, the 16th to 18th, and on the 28th. The provisional smoothed sunspot number for August 1995 was 15.7, which is still some way from the predicted minimum of 8.

I'll repeat the figures. Spots: 12. Flux: 69. Ap index: 7. X-Ray flux: A1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the 1st to the 7th of March, saw levels increase from 5.8MHz on the 2nd, to 6.8MHz by the 7th, with an average of 6.4MHz. The darkness hour lows also increased from 2.3MHz on the 1st and 3rd, to 3MHz by the 6th and 7th. The average was 2.7MHz. The daytime highs took place between 1200 and 1400 hours every day, except on the 4th, when they took place at 1800 hours. The darkness hour lows took place between 0300 and 0600 hours. One short spell of blanketing E took place in the early hours of the 5th.

I'll repeat the figures: highs - 6.4MHz, lows - 2.7MHz.

And lastly the solar forecast:

This week the slightly more active side of the sun is expected to rotate into view but solar activity is expected to remain at very low levels. Solar flux levels may increase from the low 70s to just above the mid 70s. Geomagnetic activity is expected to start the week at "quiet" levels, but then increase to "unsettled to active" conditions from mid-week. Ionospheric MUFs for the south during daylight hours are expected to be about 18MHz but could decline later in the week. The darkness hour lows are expected to be about 9MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Zulu and G7 Whisky Kilo series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Victor series.

I guess all the terrorist leaders at Hesbula and Hamas are saying
to themselves right now: "DARN! We can't bring radios to the Olympics!
Call off the mission!"

Not.

There may be some legitimate reasons for restricting radio access
at various points, but I think that terrorist security would be
at the bottom of the list. After all, if a terrorist is going to
come to blow you up, do you really think the fact that he can't
bring his radio will make him stay home?

Unless you really need the aircraft recieve of the ft-11, I would say you should be looking at the ft-10. It has encode and decode of ctcss and man other cool options such as a voice recorder that can be set to record automatically after a page and respond with a prerecorded message etc. There are just tons more features in the ft-10, some of which can be had on an ft-11 as options, but that will make the ft-11 cost even more. As it is now, the ft-10 is about $20-$30 cheaper where I have seen it, and it has more than the ft-11 for that price. Oh, forgot the ft-10 is also the first amateur HT to have a mil spec rating.

Just my 3 cents worth

Josh

And indeed, your point is equally applicable to the WARC bands on HF.
Seems like every time I tune across 30 or 17M, there is very little
activity, despite all the modern appliances covering these bands quite
nicely.

>>The cost of parts is cheaper and they are more

Surplus, older stuff. Wading through the flea market at Foothill (Sillycon
Valley) at 6 in the morning and there are all kinds of old HP, Tek and
other scope mainframes, spectrum analyzers and so on. Stuff that cost
upwards of $40K 10 years ago is under $3K, sometimes $1K now.

The test equipment can be found, and perhaps my idea of "cheap" is not
other people's idea of cheap -- when I was in college, it seemed that no
one (not even the college, unless it was donated) could afford some of the
over-100Mhz gear that I had the privilege of using.

Now I see the very same stuff sitting on asphalt under a tarp for under
$2000, sometimes around $1000. Sure, this ain't pennies. But it would seem
that there isn't a shortage of people with money burning a hole in their
pocket to plunk down upwards of $3000 for the latest Yacomwood, and then
buy whatever the latest and whizziest toy is every other year. So my
central point is that lots of this equipment (like 0.1 to 1GHz spec
analyzers in a Tek 7000-series mainframe) which was *unthinkably* expensive

10, 15 years ago is now in the surplus/used market at a price range that commercial appliance vendors are making a tidy profit. So people (not necessarily you or me, but some people seem to) have this level of bucks.

>The real problem is a chicken and egg problem. Until the bands are

Well, all I can say about that is this: The level of acticity on things like 2m (low-end, not FM repeaters) seems as low, or lower than 10 years ago, 432 seems about the same and so on. And yet appliances are more available and cheaper than they were 10 years ago.

Let's take, heck, let's just pick 432 (EME, direct, whatever) out of the all the bands and issues we could talk about. There is an abundance of off-the-shelf appliances for just about everything on this band: full-scale ATV, multi-mode rigs, rigs designed for OSCAR operation, antennas, amps, you name it. And yet, 432 seems to still not catch on. 440 FM seems to catch on in metro areas when the 2M bandplan fills up or someone wants to put up a semi-private repeater.

So, if we can't fill up 432 with activity, a band filled with possibilities, for which we can all buy appliances and toys to our hearts content, then how are we going to get activity on the bands which might require some experimentation? I know I'm basically re-hashing your issue of 903 Mhz above, but with more of a case. I know there are people out there on 432, but when I look at the number of people doing stuff there, the number of people just doesn't seem to grow. QST devote a column to it; before Ham Radio went out of business, they had a column devoted to it and yet the level of activity doesn't seem to grow all that much.

What to do about this? I quite frankly have no idea. How much *simpler* can using a chunk of spectrum get than the low end of 144 or 432?

>I think Gary has at least part of the solution, i.e., wide band modes that
>need the sort of bandwidth available up there.

We got ATV. We have spread-spectrum experimentation. Personally, I think the latter has lots of great potential, but yet idea doesn't seem to catch on.

But let's think back to the 60's and 70's when putting stuff up into 2M and 70cm was even harder than it was today. I didn't have *jack* for test equipment back when I was a kid and hacking a GE Pre-Progress monstrosity onto 2 meters. (You shoulda heard my mother the first time I wound up the dynamotor... she wanted that thing outta the house and "_now_, young man!") But yet that didn't stop me. I hacked and hacked until other guys on 2M FM in the area told me "Well, it looks/sounds OK - I don't think the FCC will pull your ticket just yet because of that thing..."

Now to the real meat of the issue, which goes to the heart of what Hans is after: solutions.

Now that I'm older and have the bucks to really dive back in, I find that I really can't get motivated, largely because I find myself increasinly turned off by the level of ham in the hobby. In their never-ending quest to get more people on the bands, the ARRL has certainly helped fill the bands, and in some cases, with people we would have been better off without.

When I was in LA, the local repeaters were filled with trash-mouths. No one could seem to convince the FCC to cite them and pull their tickets. In the local area now (no longer in CA), we have people who come on repeaters and just belch. No cussing, just belching. What a wonderful selling point of the hobby as I'm now convincing my wife to get her ticket.

I tune across 75 phone, and 20 meters (what a cesspool) and I hear yet more of the same.

Hans wants solutions? Here's the first part: make ham radio a hobby with standards. We don't just let any bozo with money in his pocket for a radio onto the bands. (And that is certainly the state of 2M FM now.)

Let's float a proposal that the FCC charge for licenses again, we get the money put into a fund which is used for ham band enforcement and licensing issues. Get some real enforcement back, get rid of the trash and start enforcing standards of operating and behaviour. I think if we put this docket out for comment, it would garner significant support in the amateur community.

Next:

I warned you not to get me up on my soapbox. The private email that I received off my first post questioned wither I was just re-plowing old ground, or whether I had a chip on my shoulder. OK, maybe I was re-plowing, but no, I don't have a chip on. Time to light 'em up on the real thing which I think is at the root of the issue: the reason why we don't have people trying something new or doing any significant home-brewing and so on is that the level of education *in general* of people coming into the hobby is dropping like a rock (This rant from here on in is US-centric, so the folks in Europe and Japan can rest assured I'm not aiming it at their hams). This is a general result of the drop-off in science and math education in the US.

The reason why the biggest growth in the ham hobby is in appliance operators is because the great majority of people simply cannot understand the technology well enough to handle going outside the bounds of what a nicely packaged appliance can or will do. It had better be as simple as using a cellular phone or the herd won't push it.

If we're going to grow the number of people using new modes, or who would be doing home-brewing or experiementation, we're going to have to pick up the slack where the US education system has dropped the ball. I've interviewed many new and recent engineering-school grads in my position at work. And I have to say, with few exceptions, I want to either scream or sob when I see

how little real engineering knowledge, how little real understanding of mathematics, the complete lack of being able to break a problem down to its basics and work their way through it. These are engineering school grads. And not with low GPA's, either; we're talking 3.5 to 4.0.

And in the face of this, we're going to grow the hobby and increase the usage of bands which require some technical gumption? Yea, maybe if we rope up a bunch of grumpy old guys who graduated from high school no later than about 1960 and tell them "You -- start building equipment again."

In the face of this, if we hams want people to get into homebrewing and outside the parameters of appliances, then we're going to have to pick up the dropped ball and develop training materials which bring new hams up to the point of being able to understand the technology.

There is technical expertise out there -- don't get me wrong. When I read the level of technical expertise in British audiophile magazines, I'm stunned. These guys are building their own audio gear, and in some cases, scrounging old tube equipment back from the grave, and re-kindling the mathematics of tube designs I haven't seen in *years*. So there are certainly people out there around the planet who are willing, able and interested in experimentation and hacking their own stuff. Just not here in the US. When I see the level of electronics DIY journals from in the US and then compare to some of the stuff I see from the UK, Germany and other places, the US is, uh, grade-school stuff by comparison.

And I'm not trying to sound jingoistic when I say that without the US ham community fighting for and using the bands we are faced with losing, we're going to lose them. The few countries who have hams using these bands don't swing enough weight in the ITU to save these bands from large corporations, and the biggest clamor for the re-allocation of these bands comes from US corporations, so the problem begins in the US on both fronts. If there were more activity on the bands here in the US, then the issue might never get to the ITU.

So, what to do to get more people experimenting and going outside the parameters of appliances? I'm all ears. I try to do my part by helping people studying maths for college to get past their atrocious math instruction in our high schools, so I know first-hand just how bad it is and it is going to be... but now I'm starting to find that the college-level calc and stats instruction is pathetic as well.
I learned trig and calc by doing radio -- I wanted to build my own stuff to get on the air badly enough that I had to crack the books for myself in high school. I now rarely meet such kids anymore.

And I can't tell you how depressing it is to mention Smith charts to graduate engineers and get nothing but blank stares...

So I'm all ears. I think I've got my finger on the root cause of the problem. What is the ham community able to do about this tidal wave of scientific and mathematical ignorance?

Sir:

I know of a hamfest in Superior WI on May 4.
Here is the Info as printed in QST:

Wisconsin Superior - May 4, 9am to 2pm.
Sponsor: Arrowhead RAC. Multi Purpose Bldg,
I-35 to US-2, Bong Bridge, left on Belknap,
right on Tower, approx 2mi to Fairgrounds on
left. VE session. Talk in 146.94/34. Admission
$4

If you need more info send me a e-mail.

I do a lot of homebrewing, conversions, transverter construction, etc., and
I'd beg to differ. I'm not saying it is necessarily hard, but the amount
of information out there on these subjects is mighty slim. QST and other
rags tend to focus on other bands. The best magazine coverage I've
seen is the stuff in the back of 73 and it's not real extensive. Also, as
Gary pointed out, test equipment for the microwave bands is *not*
particularly available at reasonable prices.

> We have damn few excuses why these frequencies aren't used. But lo! The HF
> bands seem quite amply used, and there is that nasty, outdated code
> requirement for people to be able to use these frequencies.

The HF bands are heavily used because they provide access to a *very*
large number of amateurs. Build yourself a 5 GHz radio and who do you
get to talk to? Build yourself a simple 40 meter rig and you can talk to
virtually anyone.

> Then along comes the no-code Tech. And we have more activity; but again,
> only on the bands for which there are appliances.

Not quite. There are appliances for 903 and 1296 but in most areas of the
country there aren't many people to talk to. 6 meters is even a better
example. There is plenty of commercial gear available but not much
utilization because that isn't where most people listen.

>The cost of parts is cheaper and they are more
> available then ever before, test equipment for the frequencies in question
> is available in surplus at prices heretofor only dreamed of, and yet, I can
> tune across the low end of 432 and hear.... silence.

Lets see. A scope that covers 400 MHz is how much? Even simple test
equipment such as impedance bridges, grid dip meters, etc., aren't that
plentiful for bands above 220 MHz. Move up to the microwave bands and
tell me about a source of cheap plentiful gear or test equipment. I'm
working on those bands and would *love* to have test equipment for
them. Please tell me where I can get cheap test equipment and amplifiers
for our microwave bands.

The real problem is a chicken and egg problem. Until the bands are occupied, most folks don't want to invest in the gear or time to get on the bands. Since that is true, the bands won't become occupied. The WARC bands are a good example of this. They are often relatively quiet even when open. I rarely find 17 or 30 meters very crowded while 20 and 40 have QSOs crowded one on top of the other.

I think Gary has at least part of the solution, i.e., wide band modes that need the sort of bandwidth available up there.

73,
Todd

>What is most distressing is that most of the QRP adherents themselves not
>only seem to be content in using CW exclusively for their communications,
>but have little inclination to investigate other modes which would be an
>improvement over CW.

Jim, we've gone round and round and round on this before. The plain fact is, many if not most QRP enthusiasts do it for the sheer simplicity of it. There's many reasons folks get into QRP, few of them have anything to do with pushing the state of the art. Cost of equipment, simplicity of equipment, small size/weight/current drain, low-stress operating, ease of construction and repair with simple test equipment are a few of the reasons. Having to drag a computer along puts a MAJOR cramp in most of these!

A ham friend here at work is getting into QRP now. He wants a small, light, low-current-drain rig to take on camp-outs. He just wants to have fun and make a few contacts from the family tent. I don't think sending high speed data to stations in South America that he can't even hear is on the top of his list. You want to do that, go right ahead, have fun, let us know how you do. We'll be on 40m CW.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS |
last updated March 14, 1995 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic mail: |
parnass@lucent.com. Thanks to Dennis Dale and ARRL for
providing information.

MARCH

Mar 10 (Sun), Waukesha, WI - SE Wisconsin FM Amateur
Repeater Society Swapfest, Waukesha County Expo Center
Arena. Exit 294 on I-94 west, then south on C.T. 'J'.
Setup at 6 AM. Admission $5 at door. Talk-in 146.820 MHz.
VEC testing. Info: (414)650-0724.

Mar 24 (Sun) - Computer Central, Harper College (see notes
at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur
Radio Society hamfest 96. Info, call Lloyd Sherman,
(815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake
County fairgrounds. Admission $5 at gate, free parking.
Setup at 6 AM, doors open at 8 AM. VEC testing. Info:
Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL
60044, tel (708)234-4124.

APRIL

April 14 (Sun), Madison, WI - Madision Area Repeater Assn
Swapfest and Computer Fair. Dane County Expo Exhibition
Hall. 4 miles west of Hwy 12 & 18 and I-90 interchange.
Watch for Rimrock Road exit. Doors open at 8 AM. Admission
$6 plus additional parking fee. Kids 10 and under free.
Talk-in on 147.15 MHz, PL 123.0 Hz. Info: (608)245-8890.

April 21 (Sun), Arthur, IL - Moultrie ARK. Info: Ralph Zan-
cha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

April 28 (Sun), Chicago, IL - Chicago ARA Ham Auction.
DeVry Institute of Technology, 3300 N. Campbell Ave. starts

at 12 noon. They will auction your electronic goods if you bring them in before noon. All goods subject to 10% donation. If purchased back by the seller, then 5% will be due. All items sold as-is and all sales final. Info, call Dean (708)331-7764 morning or evening, or call George (312)545-3622 daytime.

MAY

May 5 (Sun), Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds, intersection of Suydam and Gletty Roads, just north of Rt. 34. Admission $6 at gate, free parking. Talk-in on 146.73 MHz and 146.52 MHz.

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Will County Fairgrounds, I-57 to exit 327 east. Admission $5 at gate, free parking. Kids under 12 free. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun), Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell. 8 AM - 3 PM, setup at 6 AM. Admission $5 at door, free parking. Kids under 12 free. Talk-in 147.225, 444.825. Info, call (312)545-3622 or (312)486-6823.

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Willow Springs, IL - Six Meter Club of Chicago. Santa Fe Speedway, 91st and Wolf Rd. Gates open 6 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922. Good hamfest but, restroom facilities are usually filthy.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Admission $5. Kids under 12 free. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

: transmissions from overhead commercial airliners. These are actual
: commercial airline communiques to the tower and back....

Quite obvious what's going on here. This is a classic case of "image"
reception.

Suppose your FM radio is tuned to 100.3 MHz. Inside the radio, the local
oscillator runs at 10.7Mhz above what station you are picking up, in this
case it would be 111.0Mhz. When you mix the two signals together, one of
the things you get is the difference of the two signals, or 10.7Mhz. The
radio is tuned to amplify and detect 10.7Mhz.

Remember that the oscillator is running at 111.0Mhz, suppose an aircraft
transmits on 111.0+10.7 = 121.7, the difference between these two is also
10.7 and the radio can also demodulate this.

So your FM radio is capable of receiving signals which are 21.4 Mhz above
the dial setting of 88-108, (119.4-139.4), these frequencies are mostly
used by aircraft. However, the front end of the radio is supposed to
tune out these frequencies, so the aircraft signal has to be pretty
strong for you to pick it up.

Most, if not all, scanners (unmodified) can receive cellular frequencies
through a similar technique. Even though they cannot tune cell freqs.
directly, it is normally easy to find another frequency outside the cell
band which will allow them to be picked up.

>then told not to speak because they're distracting attention from
>someone elsewhere in the park who paid the gov't a hefty fee for the
>"right" to speak in that public place.

That's a good point, because it illustrates the inequity that occurs when the government sells a grant to use property it doesn't own. One thing needs clarifying though. Airwaves aren't "public" - the government confiscated them many years ago and now claims to own this resource (as evidenced in part by recent auctions). The term "public property" is a misnomer that simply refers to property the government has expropriated. In fact, in the former Soviet Union, *everything* was "public" property.

This has nothing to do with your analogy, but use of the term "public" may confuse the issue. If it's replaced with "government-controlled", or perhaps just "government", no one will be tempted to misunderstand.

Anyway, the problem with the analogy is that the government park is large enough for many persons to physically occupy the property and for them all to speak at the same time. However, a frequency can only be inhabited by one person (transmitter) at a time. This is what so clearly differentiates the act of occupying a frequency from one's right to free speech.

>Of course, there's only so much space in the park, but if there's
>unused space available the "trespassing" analogy begins to fall
apart.

Only if one mistakenly believes that they (and other citizens) actually own government property. I don't, therefore the act of trespass is unrelated to whether the property in use. Enter a government park after hours and they'll confirm this for you. <g>

Perhaps a more important aspect to all this is whether trespass can occur when *no one* owns the property. Spectrum easily qualifies as untitled property - the government didn't purchase it and they

certainly didn't create it. Control by the F.C.C. is maintained by force, not by title or the right of ownership.

In consideration of this, perhaps I was wrong and Mr. Kobres did not trespass, and is therefore guilty of nothing. In that case, his rights *have* been violated, although not necessarily his right to free speech. The F.C.C. would have removed him from the property even if he only transmitted a carrier.

73,
Jack WB3U

:>should accept that. In this certificate and diploma driven world,
:>we may be the ones out of step. That's Ok too, not being in need
:>of external validation, we don't *care* if we're out of step, we're
:>following our own drummer.

I never said I didn't accept it,Gary. Quite frankly, with the contesters I've
ever run into on the band, I don't have much choice but to accept it. :-)

What makes me see red is that they don't seem to accept those of us who don't
share their view on HF operating.

On more than one ocassion I've mentioned that I don't do DX chasing and/or
contesting and was told, "gee, sorry you don't like HF." Excuse me? Where the
hell did THAT come from? I didn't know that HF was only created by God to do
those 2 things and nothing else. THAT'S what bugs me about these guys; the
obsession.

My operating is strictly tied to having a genuine conversation with the
person on the other end of that path. Whether I have 10, 100 or 500 QSL cards
is, to me, pointless. I'd rather be remembered as the guy you spent 2 hours
talking with one weekend, than the guy who had 15,000 points for the last
contest. Scores come and go, but memorable people are forever.

This past Sunday evening there was an apparent auroral opening on 6 and 2 meters between the Puget Sound region of Washington State and prairie provinces of Canada. Eric KB7DQH reported weak reception of a net on 144.22 mhz originating in Alberta (?).

This occured about 7:30 pm PST.

Did anyone else have any contacts during the period of activity?

The Boulder K index was 5 to 6 during the event.

Kerwin

well from a reference material stand point, the arrl could dust off 'Understanding Amateur Radio'. maybe someone could convince Russ Hanson to write that "how we got here" text he talks about doing every so often. (Russ thinks there's a real need for a book that goes to the basics of RF design - explaining how the engineers of the 40/50's laid a foundation for the developments that came along in the 60/70/80's. a foundation that's been "built in" to modern simulation software to the point where the user has no idea of what assumptions are being made and that he gets a result that works in the real world...), and there was something a few days ago where Chris Bowick was doing a 2nd edition of his book...

books like "First Steps in Radio" looked like they strained to fill the space available. indeed, maybe some of those types of publications that are of limited use to established amateurs (like FSIR) should be mostly on a web page for reference...

but it would be nice to see Understanding Amateur Radio again (and no cute cartoons and "chatty" prose...)

ARLP011 Propagation de KT7H

ZCZC AP32
QST de W1AW
Propagation Forecast Bulletin 11 ARLP011
From Tad Cook, KT7H
Seattle, WA March 15, 1996
To all radio amateurs

SB PROP ARL ARLP011
ARLP011 Propagation de KT7H

Solar flux and sunspot numbers were about the same last week as the week previous. March 11 was quite disturbed, with the K index as high as 6 and an A index of 28 for the day. Conditions are expected to become unsettled again through March 17, and again on March 22 and 23 and April 6 and 7.

Expect solar flux values to continue to drift between 70 and 75 here at the bottom of the sunspot cycle. The latest projection from the NOAA Space Environment Service Center shows the sunspot number bottoming out between April and June of this year, and the solar flux reaching minimum between December of this year and February of 1997. For the solar flux, this is a bit sooner than any previously forecast. Two years out look for average flux values about 20 points higher than they are now, perhaps in the mid to high nineties.

Sunspot Numbers for March 7 through 13 were 0, 0, 0, 0, 18, 27 and 24, with a mean of 9.9. 10.7 cm flux was 67.8, 69.8, 67.5, 69.1, 71.8, 73.2 and 71.3, with a mean of 70.1.

The path projections for this week are from the center of the U.S. to Western Europe, Southern Africa, South America, South Pacific and Japan.

To Western Europe look for 80 meters to open from 0030z to 0700z, 40 meters from 2330z to 0700z and 30 meters around 2100z. 20 meters looks good from 1430z to 2000z, and 17 meters around 1800z.

To Southern Africa expect 80 to open from 0100z to 0400z, 40 from 0030z to 0430z, 30 from 2300z to 0230z, 20 from 2000z to 2300z, 17 from 1700z to 1930z and 15 from 1800z to 1900z.

To South America check 80 from 0100z to 1000z, 40 from 0000z to 1030z, 30 from 2300z to 1030z with a weak period around 0900z, 20 from 2000z to 0200z, 17 from 1430z to 0100z and 15 from 1600z to 2230z.

To South Pacific 80 should open from 0600z to 1300z, 40 from 0500z to 1400z, 30 from 0400z to 1430z, 20 around 1700z to 1830z and 0130z to 0330z, 17 from 1730z to 0100z and 15 from 1800z to 2300z.

To Japan check 80 from 0900z to 1300z, 40 from 0830z to 1400z, 30 from 1330z to 1530z and again around 0700z, 20 from 2100z to 0130z and 17 from 2200z to 0000z.

>

Are we talking about the domestic North American market? If so do you
have any examples to support the contention? Otherwise, I can only
presume that we are speaking of the occaisional rogue station... Radio
Tirana a few years ago come to mind on 7065 kHz, but I would hardly agree
with the concept that the broadcasters are running amok outside of their
allocations.

> In order to prevent this, we Amateurs must not only band together, we must

>entice any such person with!
>

Considering that the ITU is an international body whose membership is
made up of representatives from member administration, I disagree with
the presumption that packing that body with amateurs will significantly
affect any decisions favourably for the amateur services. For example,
Mr. Bob Jones, a Canadian amateur, is the Director of ITU-R, yet he is
not in a position to change any of the amateur allocations. That lies
within the pervue of the membership, and not of the bureaucracy.

> What we should be striving for is a set of harmonically-related bands that
>can be Amateur exclusive allocations worldwide! With guarantees, in writing,
>that these allocations will *never* be taken away or subtracted from.
>

..and how does one extract that guarantee? If you go to the negotiating
table with a chip on your should, don't be too surprised that it will get
knocked off. Remember, it is more likely that amateur radio operators
are considered only one or two steps above being either subversives, or
decadent fat old men with nothing better to do with their time. I by no
means agree with these ideas, but we amateurs, particularly in the
Western civilizations, are not in a really strong position to make such
demands.

> Then there is the not-so-little problem of the non-ITU signatory countries..

>whatever works (economic sanctions from the US and Europe might be a good
>starting point!) until they abandon their non-signatory status and join the
>rest of the world in acting responsibly towards spectrum management!
>

How many nations are not members of the ITU? I suspect that one could
count them on one hand. But in the instance of 40 metres, it must be
remembered the in ITU Regions 1 and 3, 7.1 to 7.3 is indeed allocated to
broadcasting. Therefore, there do not seem to be very much grounds to
call for boycotts of these nations when indeed they are permitted to
operate on these bands with these services.

> Some other targets: Business band radio - still largely FM, non-trunked and
>underutilized, occupies a great deal of the 30-500 MHz area wastefully.

Yes, I daresay that you are right that they are underutilized, but it is
funny that this is only the case in underpopulated areas.

>Fixed-Service HF - totally obsolete, no real use of this can possibly be
>justified, given cellular technology.

Why? Cellur is for local mobile usage, whereas Fixed-HF is still the
only answer in some applications where there are no wireline facilities,
often assigned with mobile assignments.

IMTS - still with us, why?? UHF-TV -
>another wasteland! Even the heavy-population metro areas seldom have more
>than 8 stations there, even tho theres room for 70!! Besides, DBS and cable
>are going to guarantee that this space remains unused.

You make some valid points here, but none the less, some of the UHF
spectrum has been re-allocated and is now used for cellular systems and
in Canada for trunking. It remains to be seen that DBS will have that
great a penetration such that it will obviate local service on the
traditional broadcasters. (I tend to agree with you, however, but I like
many others, are terrible prognosticators.)

>High Seas - a total
>waste now that most ships carry sat gear! 2-3.5, 4-7, 8-12, 16-21, 22-24MHz
>plus all those V/UHF frequencies?? Absurd!

No, the absurdity is the belief that most ships carry satcom. Nothing
could be further from the truth. The big ocean going tankers and the
like, for sure, but for the majority of shipping, HF/HF with DSC will be
in there for the long haul, if for anything, because it is much cheaper
than the satelittle services provided by INMARSAT.

>There arent enough ships in the
>whole world to justify it! And lastly, there's a matter of those 'experiments'
>gone awry, like the 220-222 MHz slice that was "SUPPOSED" to have helped to
>usher in ACSSB...remember? Here again, the forces inside industry screwed
>the Amateurs out of some space...and they never did with the spectrum what
>they claimed! These sorts of situations should be eliminated by insisting that
>the allocation either be used for it's stated purpose or else.
>

This is a domestic spat that I would prefer to keep out of. However, I
will say this -- the amateurs in the US can hardly claim that they were
hard done by because they lost an underutilized band, that was not
primarily allocated to the amateur service in the first place.

3506. More to VHF/UHF than repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-15 00:00:00 UTC
From: Carl Estey <carl.estey@HBC.Honeywell.com>
Message-ID: <314977F7.24C6@HBC.Honeywell.com>
Source record: 229477

During a qso recently, the idea of preparing a talk about various amateur activities beyond chatting on repeaters came up. The more the concept was discussed, the more I felt compelled to prepare the talk. After several weeks of preparation the 2-hour presentation was developed. It presented the basics of EME, tropo (sporadic E) long-haul communications, meteor scatter, aurora, lightning scatter, ATV, and satellite communications. Mixed in were operating activities like contesting, local special-interest clubs, newsletters and breakfasts. Substantial show and tell was included.

The presentation was intended to spark interest with beginners who might otherwise view the limits of amateur radio as what they find on repeaters. The sole interest was to develop the FUN concept of amateur radio ... and that is a message we need to continue to develop and deliver. Amateur radio should be FUN!

My question is: has anyone developed a video presentation using the same subject but including actual clips from EME operations, meteor scatter qso's, etc? What needs to be added is actual clips of those modes being used. One picture is worth a 1000 words, right???

I would like to present this same talk to other local clubs, in the hope that it will spark some folks to discovering others aspects of VHF/UHF operations so that they may experience more FUN!

Ideas???

73

5R - [Malagasy] Gerard (F2JD) received his licence to operate from this
country.He will stay until September , the call issued was 5R8EN.
QSL via F6AJA (Direct or Bureau).
9M8 - [East Malasia] DL3ABL and DL6MHW will be active from Sarawak ,
14 to 25 March.The calls are 9M8AD (Andrea - DL3ABL) and 9M8MH
(Michael - DL6MHW)..Activity on 80, 40, 20, 17 and 30 Mtrs CW+SSB.
QSL via DL3ABL.
CO_iota - [Cuba] The DXpedition to Juventude Isl. (IOTA NA-056) continues
but CT1ESO cannot go and so CO2QQ will replace Luis.
CU_dfp - [Azores Isl.] CU5ARJ (Associacao de Radioamadores Jorgenses) will
activate the following LightHouses for the D.F.P. Award :
Rosais - S.Jorge Isl. - Ref. FAZ-005 [23 and 24 of March]
Topo - S.Jorge Isl. - Ref. FAZ-006 [4 and 5 of May]
The QRV frequencies are : 144.500, 14.170, 7.055, 3.676 Mhz.
S.Jorge Isl. also has the Ref. IOTA EU-003 and DIP AZ-005.
CT - [Portugal] CT1FMX (Jorge) and CT1EWA (Paulo) are going to
"Farol Penedo da Saudade/S.Pedro de Moel" , both LightHouses ,
from 22 to 24 March.Calls are CS5FMX and CS5EWA,QSL via homecalls.
D6 - [Comoros] Michel , FR5HG , is active from Comoros as D68SE.If you
need him on the 40 mtrs band he is QRV on 7.010 Mhz from 02h30 to
03h00 UTC.QSL via F6FNU.
DU_iota - [Philipines] Erich , DJ1PV , is active mainly from Quezon (OC-042)
but for some days he will be in Polillo Isl. (OC-091) , the dates
are not known but Erich will stay on this country untill April 16.

Erich cannot operate on 1.8 , 18 , 24 and from 14.100 to 14.275
due to licence restrictions.Look from him on 14.275 and 21.260 Mhz.
EA9_iota- [Ilha de Alboran] An spanish team is going to Alboran Isl.(AF-042)
from 19 to 21 of April.QSL via EA4URE.
FT5_wxz - [Crozet+Kerguelen+Amsterdam] FR5HR operation is delayed for 1 week.
HK_iota - [Colombia] Possible operation from Palma Isl. (SA-078) on March 15 th
by HK3JJH.
JW - [Svalbard] SM0AGD (Erik) and SM0DJZ (John) are going to Svalbard
from 14 to 18 of March.They will be mainly on 80/40 and 30 CW.
Some SSB and RTTY operation is expected , Also RS-12 ...
The calls to be used are JW/SM0AGD and JW/SM0DJZ.QSL to homecalls,
The QSL address of SM0AGD is only ok in the 96 Callbook.
[SM0AGD: Erik, Vestegatan 27, S-19556 Marsta, Sweden]
JW - [Svalbard] F6EOZ (Claude) is on Svalbard untill the end of May.
The calls used are JW/F6EOZ/MM or JW/TM6E/MM.Special attention to
the 20 mtrs band and Satellites.
JX - [Jan Mayen] JX9ZP mainly on SSB from the Weather Station in Jan
Mayen.
KH0 - [Saipan] JH4RHF is going on a business trip to Saipan , from 10 to
18th March.The call will be KH2S/KH0.Look for him around 10h00 to
16h00 UTC on 40 or 80 mtrs.
TJ - [Cameroon] TJ1AG checks out daily on the African DX Net , on 7.065
Mhz from 20h00 to 23h00 UTC.QSL via F5RUQ.
VQ9 - [Chagos Isl.] Mike , KB7HO , will soon operate as VQ9HO , look
for him around 13h00 to 15h00 UTC on 14.140 , 14.180 , and 14.190
QSL via Bureau or Direct to KB7HO.
VK2_iota- [VK2 Centre Group] An Australian team is going to Broughton Isl.
for a 24h effort , from 6 to 7 April.This one is new for IOTA !!!
Call not known , QSL route is VK2BEX.
VK4_iota- [North Coast south Group OC-171] Bill expects to be active from
IOTA OC-171 as VK4FW/p , dated 11 to 14 March.QSL via ex-VK4CRR.
VK8_iota- [Melville Isl.] The Dxpedition to this Island is confirmed , dates
are 15th to 18th March from Snake Bay.Call to be used is VK8MI.
QSL via VK4AAR , only direct - No Bureau ! :-(
VK8_iota- [Croker Isl.] Stuart (VK8NSB) will be active from 17 to 24 July
this year.This Island is a NEW ONE for IOTA.Possible calls are :
VI8CI or VK8CI , QSL to VK8HA - Direct or Bureau !
XZ1 - [Myanmar] The Central Arizona DX Association will conduct a
DXpedition to the Union of Myanmar from 2 to 12 April this year.
This expedition will be credited for DXCC.The station will be
installed in Yangon (former Rangoon) , they will operate mainly in
CW but RTTY and SSB operations are scheduled.Operators are :
K5VT and WA7LNW (RTTY)
KC5AYR, AB6ZV, N7WTU, WA7MTF and WY7K (SSB)
K5VT, N6BT, AA7WP and KF7AY (CW)
OH2BH and JA1BK can eventually join the team...The call is XZ1N.
You can check out the Web Page for this DXpedition at :
http://www.getnet.com/~kf7ay/myanmar.html and see the new updates
for this DXpedition.Bureau QSL cards can be requested via the
internet to xz1n@qrz.com , for a quicker reply request QSL via

regular mail with SASE to KD7E (Gary McClellan, 3422 E. Altadena
Ave., Phoenix, AZ 85028 USA). No electronic QSLs or On-line log.
Bureau cards will be sent out once monthly.
QRV frequencies are :

Frequencies Approximate Best Times in GMT

N. America 21 and 18-Mhz 2230 - 0230
14-Mhz 1500 - 1800
10 and 7-Mhz 0800 - 1400

N5FG QSLs US1IDX -> Floyd (N5FG) is now the new QSL Manager for US1IDX ,
Igor Slakva.Igor's contest call is US1I and Floyd also QSL's for this call.
Send requests to Floyd with a SASE.The're using Internet to exchange the Logs
and Floyd already has the logs from the ARRL DX Contest.

New Pfx for U.K. -> Starting April 1st. the UK amateurs will also use the
"M" allocation by ITU.They were given this way M,MX(England), MW,MC(Wales),

MM,MS(Scotland), MI,MN(No. Ireland), MD,MT(Isl. of Man), MU,MP(Guersney),
MJ,MH(Jersey). The 2nd prefix is for club stations.

Portuguese Castles Activity -> CT1AHU and CT1AUO were active in March 10 ,
signing portable from some new ref. for the Portuguese Castels Award.
No more info available !

I probably won't know the exact answer due to your location not being in my area! However, are you in the proximity of an AGA (Air-Ground-Air) station, used by Air Traffic Control for AGA communication? If so then it is simple breakthrough, as we tend to use quite high powers.

If you do not then I would put the radio up for auction, or patent it!

> My question.. Will Internet be the death of Amateur radio, or an
> enhancement to the hobby? Let me know what you think.

We're in a period of transition. Radio, which was VERY popular to most Hams in their youth, is being replaced by satellite and wire-line links. While radio will always have a cult, there will never be the population of the 50's and 60's.

If you analyze what goes on in the Ham bands, you find that for the most part it allows a group of people to communicate with each other, who have common interests. Listening through the 75 meter and 40 meter bands at various times will show that most are appliance operators. The facade of Hams building their own equipment is relegated to the QRP Morse Code bands.

It's merely a nostalgia thing anymore. You can communicate much easier via satellites and wireline, with several orders of magnitude increase in through-put. The sad thing about Ham radio, is that the current generation is composed mostly of "me" people. Screw the rules, screw my neighbor, I want that QSL card. Screw everyone, me, me, me... Plus, they want someone else to build and maintain it.

If you show a 13 year old a cell-phone and a talkie, he/she will pick the cell phone 99% of the time. It's not that he/she doesn't appreciate Ham radio, it's just that they can communicate with more of who they know. The current generation of Hams do not tolerate teens on repeaters. In almost every case they make them unwelcome. Being a Ham mentor is a thing of the past.

The number worked from the San Francisco area the same day as the original post. It went to what I think was a voice pager number--message time was about 30 seconds. I had to leave two messages because I was specific about what I was looking...BEEEEP. Anyway, I haven't heard anything back.

He may have disconnected the number after being flooded with pager messages, which he probably has to pay for. Give spam, get spam.

There are *lots* of ways radios can respond to unwanteds. My guess is
that the FM frequency subtracted from the the airband frequency yields
a number that would waltz its way straight through the IF circuits in your
GE "boombox". You have something causing a non-linearity to allow mixing
distortion of this kind. A corroded connection.. a strong out of band signal
driving the GE front end too far...etc.

A bandpass front end filter would probably cure it.

Check this out...
****
* GOVERNMENT THREAT TO INTERNET *
****

The FCC is considering a petition, filed March 4, to exercise
JURISDICTION over the INTERNET and make usage of Internet
Telephony software ILLEGAL.

This is a serious threat to the Internet! The FCC is moving
along at an astounding pace. They have already issued a Public
Notice for comments, which are due April 8, 1996. After this,
they will be "considering" what action to take.

The bureaucrats must be stopped NOW, before it is too late! Let
your elected representatives know your opinions.

for more info...check out the URL:

PLEASE FORWARD THIS TO FRIENDS AND APPROPRIATE NEWS GROUPS
****

3524. Easy Method To Clean Up The Bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-15 00:00:00 UTC
From: jackl@pinetree.microserve.com
Message-ID: <4icjm2$afu@crash.microserve.net>
Source record: 229495
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The issue of whether CW tests serve as a filter to exclude undesirable entrants has been a subject of no small debate. However, only HF SSB seems to attract delinquent operators in such large numbers. I work CW almost exclusively and have seldom heard the degree of intentional interference, poor operating practices and general disregard for other Amateurs that occur routinely on the phone bands.

I can't speak from first-hand experience, but I also suspect that the digital portions of the bands, including RTTY, are similar to CW in this respect (someone correct me if I'm wrong).

Therefore, I propose that General Class and above be given all HF privelages, and that CW be abolished as a prerequisite to same. I further propose that all HF SSB, AM, FM and other means of radiotelephony operation be required to be by means of homebrew transmitters only.

In order to implement this policy, any Amateur wishing to operate on HF phone would be required to first register his homebrew transmitter with the F.C.C. Registration would consist of a simple process of submitting the schematic and several photographs showing the inside and outside of the unit. Prior to approval, the F.C.C. would provide a unique ID number to the applicant, and the photos would be required to show that the number had been permanently marked into the front panel of the thransmitter. Transmitters assembled from kits that include pre-etched PC boards or a pre-punched chassis would not be acceptable. The Amateur would also be required to sign a statement that he fundamentally constructed the transmitter himself and that no commercial entity assisted in the labor on a for-profit basis.

A commercial CW transmitter converted to AM by means of a homebrew external modulator, or to SSB by the addition of a homebrew exciter or converter unit, would not qualify. The entire transmitter would be required to be homebrew. An Amateur would be able to construct and register more than one transmitter, but a homebrew transmitter built by one Amateur would be illegal for use by another on a permanent basis and could not be "re-registered" under another unique number. Any Amateur caught buying or selling a homebrew transmitter for purposes of circumventing this requirement would lose his license.

Also, in keeping with tradition, the Amateur would not have to certify that the registered equipment comply with technical specifications. He would, however, be required to certify that all phone transmissions from his station would emanate only from that transmitter, or other, registered transmitters built by the same Amateur. Use of a

registered transmitter belonging to a different Amateur would be permitted only on a temporary basis, when necessary to maintaining operations or servicing equipment. Although it would be permissable for one Amateur to assist another in constructing a transmitter and for an Amateur to solicit such assistance, it would be illegal to advertise the availability of such services or charge a fee for same.

Finally, no transmitter, commercial or homebrew, would have to be registered unless it was actually used on the air for phone transmissions. Obviously, the abundance of existing commercial phone transmitters might allow cheating the system, but even dishonost owners would at least have to build one transmitter in order to gain the privilages. Further, due to the fact that the use of commercial equipment for Amateur phone operations would no longer serve as either a status symbol or a primary conversation item, cheating should be relatively minimal.

Steve Replies to my Interent questions with some good points of his own:

>We're in a period of transition. Radio, which was VERY popular to most
>Hams in their youth, is being replaced by satellite and wire-line links.
>While radio will always have a cult, there will never be the population
>of the 50's and 60's.

Very True, I remember in the 1950's (I give away my age) when everyone in the Hood knew the resident ham, They got christmas greetings and birthday messages via Ham radio.

>If you analyze what goes on in the Ham bands, you find that for the most
>part it allows a group of people to communicate with each other, who have
>common interests. Listening through the 75 meter and 40 meter bands at
>arious times will show that most are appliance operators. The facade of
>Hams building their own equipment is relegated to the QRP Morse Code
bands.

I work in the local ham store, I spend a lot of time working with new hams who range a lot in age in setting up digital stations, Computer control and satelitte stations. Believe me, Integrating a 386, an ST-1, NOVA, the Yaesu Rotor, An ICOM 820 and all the amps, preamps and etc is building a station. I have yet to have a ham who finaly hears their first satelitte engineering beacon coming from space, at a place his computer predicted whe he said it would arrive not sound excited. So what if your Internet connection get through to Prince or Rush.. Somebody had to, and what was the skill involved.. (unless you wrote a program that ties up all the lines into your switch so only your call gets through)

>It's merely a nostalgia thing anymore. You can communicate much easier
>via satellites and wireline, with several orders of magnitude increase in
>through-put. The sad thing about Ham radio, is that the current
generation
>is composed mostly of "me" people. Screw the rules, screw my neighbor, I

Actually, they're quite close - right next to eachother. The VHF
aviation service starts right where FM broadcast ends. 108 to 136 MHz.

>

Probably not "breakthrough" (whatever that is - a term for front end
overload?). It's most likely exlained with the answer to a common radio
license test question - What is the most common reason for hearing air
traffic on an FM broadcast receiver? Answer: IMAGE RECEPTION. This is
the text book scenerio for images.

What's an image? (for the person who orignally asked about this). 2
times the intermediate frequency of your receiver, plus or minus the
tuned frequency will give you the image (+/- depends on whether you have
a hi or lo IF). 10.7 MHz is a very common IF in consumer FM radios. 2 x
10.7 = 21.4. So if you are listening to a station at 101.5 you may hear
nearby air traffic using 122.9. Or 101.5 x (2 x 10.7) = 122.9.

The front end of the receiver should attenuate most out of band signals
before they get to the first mixer amp. But a transmitter closeby could
squeak through (OK - breakthrough). The audio level is usually pretty
low since the aviation service uses AM for voice comm but it can still be
heard on a typical FM receiver.

>picks it up.

Whilst that is very feasible, due to the low powers transmitted by
aircraft (RX levels of the order of less than -90dBm even with the sorts
of aerials and masts etc., that we use in the CAA !) then I would
imagaine that the aircraft must be relatively low when overflying his
property to cause these signals to be strong enough to swamp the radio.

Peter Neidhardt (petern@terraport.net) penned:
: I own a cheap General Electric boombox (about a $100 in value) that is a
: few years old. It works well but when I am on a certain FM channel
: listening to my favourite station, I intermittenly pickup actual radio
: transmissions from overhead commercial airliners. These are actual
: commercial airline communiques to the tower and back. I know it is
: because the pilot states the airline and other info. like heading and
: other number jumbo stuff. This is a simple radio with no short wave or
: any extra bells or whistles and it works well except for the fact that
: every so often it interupts the music and I hear aircraft communication
: messages. Does anyone have any idea what causes this? I thought
: Commerical Airline bands were totally different and not even close to the
: FM bands.

: Thanks greatly!
: Peter

Commercial airline freqs are right above the FM band. Your radio is receiving an image freq and detecting it even to it's AM and not FM. The airplane is probably really close, maybe overhead.

Image freqs work something like this. The IF of the radio is 10.7 MHz, but let's just use 10 MHz. The radio station is at 100 MHz. The IF is 10, so the local oscillator is at 110 MHz. The receiver can receive at both the sum and difference of the two, so it can receive at either 100 MHz or 120 MHz. The 120 MHz is (somewhat) tuned out by the receiver's tuned circuits leaving the 100 MHz. But sometimnes the receiver doesn't do the tuning too well. And sometimes the unwanted transmitter is real close, so it gets thru anyway.

If youre using the built-in rabbit ears, make sure they are fully extended. If you are always in a certain area, the location may be affecting the reception of your fav FM station, so try to maximize the signal by changing the location. You could also try reducing the signal strength by putting the antenna in the collapsed position. Maybe one of these might help enough to eliminate your problem.

Another boombox might help, too. I bought some cheap soundesign radio in a bargain pack along with a flashlight and some batteries. I liked it because it received both FM and TV. But the receiver is atrocious, and receives all sorts of images of who knows what. It really sucks, but what can one expect when buying a radio and flashlight with batteries for twenty bucks? Not much, I guess. The Renewal batteries suck, too. They try to nail you later for the cost of the recharger! Forget it.

What you are hearing is on the image frequency. Your superhetrodyne receiver has an oscillator 10.7 MHz above the receive frequency. The radio also picks up signals that are 10.7 above the oscillator. or 21.4 MHz above the intended FM frequency. Aircraft operate in the 118 to 136 MHz range.

I'm thinking of setting up a repeater. There seems to be a very big lack of repeaters for open use in my area. No. AZ,

When I use to live in CA there were several repeaters that were able to borrow space on microwave repeater towers. Does anyone know about this? is it common to do this around the country?

There are a few state owned lands on hill tops near me, a few have microwave towers. Seems a good place to put a small repeater antenna.

I'd be interested in hearing ideas on how to use state lands for repeater sites..

That's a surprising statement, considering that the current US amateur population is three times as large as it was in the 1960s, and that it is finally, after decades of stagnation caused by the Incentive Licensing debacle, growing again at rates comparable to those of the 1950s. While amateur radio is not as large and dynamic as it could be, it is certainly far from being a declining service.

>If you analyze what goes on in the Ham bands, you find that for the most
>part it allows a group of people to communicate with each other, who have
>common interests. Listening through the 75 meter and 40 meter bands at
>various times will show that most are appliance operators. The facade of
>Hams building their own equipment is relegated to the QRP Morse Code bands.

That is also a surprising statement given the surveys that show high power linear amplifiers to be the most popular construction projects among HF amateurs, or given the types of equipment built by VHF+ operators. There certainly is an active QRP CW subculture among builders, but they hardly dominate. I'd also posit that "building" has taken on new meanings in a day of high integration and complex systems. Building today often means integrating high function subsystems into a complex communications system. The "parts" have become "larger", but in many cases so have the systems.

Even in the 1950s, most amateurs used "appliances". You have to go back to the 1920s and 1930s to find a majority of amateurs homebrewing basic station components like HF receivers. Of course today it is a lot easier to build a good receiver than it was back then, a couple of chips yield a receiver far in advance of anything available back then. But packaged solutions are cheap, far cheaper than back then considering inflation, so that has been the way most amateurs have assembled stations in recent years. Transceivers have become commodities, off the shelf items that are for the most part interchangeable in performance and function. There has been no need to build them. Building has become reserved for those things that are either too expensive to purchase or difficult to obtain commercially, and big surprise, that was the rationale for building in the "good old days" too.

>If you show a 13 year old a cell-phone and a talkie, he/she will pick the

>radio, it's just that they can communicate with more of who they know.
>The current generation of Hams do not tolerate teens on repeaters. In almost
>every case they make them unwelcome. Being a Ham mentor is a thing of the
>past.

Maybe to you and your circle, but things are different here. We welcome newcomers, especially young newcomers, and offer them an open hand in greeting, and as much guidance as they wish to receive. And surprisingly to you perhaps, teens are fascinated by the technology just as some of us were in our teens. Sure the phone works, it's a simple appliance connected to a vast bureaucratic corporation, but it offers little (legal) opportunity to explore the technology. Amateur radio is very different. It encourages taking off the covers and seeing how things work. Kids are as full of "Why?" and "How?" as they always were, at least until the education factories beat it out of them, and still love to take things apart and put them back together again. Whether it is hotrod cars or hotrodded radios, the desire to tinker is not gone.

There are people who aren't really amateurs, whose only purpose is to *use* radio equipment for some gaming purpose or as a utility, but as far as I'm concerned they don't count. They're part of the 99% described by Sturgeon's Law. They might as well be CBers (regardless of whether they can beep or not).

Archive-name: radio/personal-intro
Revision: 2.1 1994/11/01 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

You'd be surprised what a malfunctioning radio can produce, and still be communicating. A friend bought one of those MFJ analyzers and was testing everones rubber-duck. He said one of the guys antenna was an open! It was that way for years. He said with a new antenna, the whole dang city can be heard...

> Over the years, I've used 2-meter radios on commercial flights (after
> asking permission) and it is interesting, even if you only listen to
> the number of repeaters you can hear simultaneously.

> The basic problem is that airlines have lots of things to worry
> about, ...

Generally speaking, the airlines still use the route system of VOR's. They do have some fancy equipment for navigation, but the "after-takeoff" and "descent" part of the flight are usually vectors to a VOR. The VHF radio operating on 146 MHz is about 30 MHz away from the VOR frequencies. Since most Hams do not calibrate their own equipment, they do not know if there is spurious transmissions. They press the PTT and talk, and don't really care if it is splattering until someone points it out. Listening to the local repeater, I can hardly ever find a Ham who cares even a little about Deviation.

While it's true that electronic navigation doesn't replace looking out the window, there are times when you don't want to be transmitting. The best time not to transmit is when the flight deck is doing an ILS with a 20 knot crosswind :-)

Steve

Gary,

Inflamatory as it may be to the "beepers" it's "right on!" We've got
far too many "beep forever" folks and not enough new blood to develop
the new gear and applications to assure our continued use of the
spectrum.

When the bands are taken away and auctioned off for HDTV channels or
wireless computer networks (commercial ones, of course) whatever, we
all will lose, but the "beepers" will be primarily to blame for
keeping the "clubhouse" closed to those who don't share their
backward, parochial views.

This is true. My best argument regarding the operation of a station
on-board an airplane is Delta Air Lines' current policy regarding the
operation of PED's. Since during cruise, most of their modern planes use
GPS with the occasional VOR/DME cross-checking, so they permit the use of
RF receiving devices. They won't allow any radio to transmit during any
stage of flight, but it's still interesting to listen to 4 repeaters at
once on one frequency from 35,000 feet. :)

>>
>>Could some clever person comment on how severe the doppler problem
>>would be?
>
>
As Gary points out analog FM is a bad choice through the satellites,
however, the "capture effect" is not the predominant reason. SInce
the transponders are generally simply linear transponders, it's not
"capture effect" in the traditional FM sense, but rather "power
hogging" by strong signals ... coupled with the fact that FM is
"constant envelope" (i.e. 100% power all the time) ... as opposed to
SSB which has something like 15-18 dB peak-average power ratio on
typical uncompressed speech. This makes FM very power-inefficient
for satellite use, where transponder peak power output capability is
limited. SSB is MUCH more power efficient (and more bandwith
efficient, too ... by a factor of 5-10X).

The Doppler shift is a problem ... an even bigger problem is the "fast
fading" that will result in severe "picket fencing" on signals. This
is caused by the constructive/destructive interference caused by the
fact that the receiving antenna sees the vector sum of the direct
signal (if any) and all of the reflection components from every
reflector you're near (houses, cars, hills, skyscrapers, etc., etc.)

The resulting vector-sum signal which the receiver gets "looks" like
it has been randomly modulated in both amplitude and phase. The
amplitude modulation can have fade depths of many dB and, at higher
frequencies and rates of motion (yours, as in mobile, as well as the
satellite's, in the case of non-geosync satellites), fading rates
which approach or exceed the rates of syllabic variations in speech.

Therefore, this "fast fading" cannot be corrected for by means of the typical feedback AGC circuit (which would try to remove the modulation, too).

The phase variations are similarly severe, particularly if you're interested in transmitting data.

These impairments cause speech to be unintelligible, bit error rates on data to be poor, and even introduce an "irreduceable error rate" where, no matter what your transmit power, you cannot achieve a better error rate, because of the channel impairments. (In other words, regardless of S/N ratio, the raw bit error rate cannot be improved.)

There is a complete, effective solution to all of these problems ... but it is not yet available on the market as an "appliance." It's an outgrowth of some research that I did a few years ago while developing new technologies for NASA's mobile satellite program MSAT-X. It's patented and I hope to find the means to bring it to market in the next year or two. (The traditional manufacturers sofar seem to have a rather large NIH factor ... that's "Not Invented Here." :-)

OOOPS ... I'm getting awfully long-winded here. I don't want to monopolize the forum, or get too commerical regarding my patents, so if anyone wants to follow-up on my comments, please e-mail me.

Commercial airline frequencies are just above the statndard FM
broadcast band. Your radio probably has a "cheap" tuner that
doesn't just zero in on the desired frequency, but is subject to
interference on nearby frequencies when a transmitter operating on
those nearby frequencies is nearby (gee...how many more times could
I squeeze the word "nearby" into that sentence?).

What's happening is your radio is probably tuned to an FM station
near the upper end of the band (around 107-108mhz) and you're
probably under a flight path. When a plane is nearby (there's
that word again) and the pilot transmits on one of the lower
airline frequencies, your radio's less than discriminating tuner
picks it up.

PLEASE READ ARRL BULLETIN #9 BELOW REGARDING THE ARRL's PETITION RM-8763!

ARRL Bulletin #9 describes the ARRL's having petitioned FCC to modify Part 97 of the Rules to change (quoting from RM-8763) "its policies and procedures governing preemption of state and local regulation of the siting and maintenance of antennas and antenna support structures for use of licensees in the Amateur Radio Service." This amendment, if adopted, will enhance PRB-1 and give us more ammunition to fight restrictive regulations and may allow Amateurs to preempt deed restrictions, covenents, CC&R's, or condominium regulations that now prohibits erecting Amateur Radio antennas.

Read the bulletin below and send your comments to the FCC so that they are received no later than March 22, 1996. It is not necessary that you go into great detail why you support (or oppose) changing the Rules, but of course you may do so if you wish. However, it's probably best if you keep your comments brief, to the point, and polite.

Address your comments to:

Secretary
Federal Communications Commission
Washington, DC 20554

Start your letter with your comments with a header something like this:

In the Matter of

Modification and Clarification of
Policies and Procedures Governing
Siting and Maintenance of Amateur
Radio Antennas and Support RM-8763
Structures, and Amendment of
Section 97.15(e) of the Rules
Governing the Amateur Radio Service

To: The Commission

(Enter your comments with your name, callsign, and address.)

If you want each FCC Commissioner to get a copy, you should send eight (8) copies of your letter.

THE DEADLINE FOR COMMENTS IS FRIDAY, MARCH 22, 1996, SO PLEASE DO IT NOW!

73,

Tony Stalls, K4KYO

SB QST @ ARL $ARLB009
ARLB009 PRB-1 change sought

ZCZC AG88
QST de W1AW
ARRL Bulletin 9 ARLB009
From ARRL Headquarters
Newington CT February 15, 1996
To all radio amateurs

SB QST ARL ARLB009
ARLB009 PRB-1 change sought

The ARRL wants the FCC to take additional steps to compel state and local governments to make reasonable accommodation for Amateur Radio under PRB-1 and apply the least restrictive means to regulate amateur antennas and activity. In a Petition for Rulemaking filed February 7, the League calls on the FCC to amend Section 97.15(e) to say that any state or local ordinances restricting ham radio antennas to heights below 70 feet would be presumed unreasonable, unless the state or local authority could show its restrictions support a clearly defined health, safety or aesthetic objective. State and local governments also could not impose substantial application costs on amateur service licensees.

The League also wants the FCC to acknowledge that it has an interest in the effective performance of Amateur Radio stations in areas regulated by deed restrictions or restrictive covenants rather than by local zoning ordinances.

The League says clarifying the preemption policy (PRB-1) would help guide municipalities to enact provisions that make fair accommodation for amateurs and avoid highly divisive litigation between hams and localities.

Under the suggested changes, state and local governments could apply to the Commission for a full or partial waiver of the amended rules in unusual circumstances.

The FCC has not assigned a rulemaking petition (RM) number.

Here is the suggested wording of Section 97.15(e) the petition requests:

(1) State and local regulation of a station antenna structure must not preclude amateur service communications. Rather, it must reasonably accommodate such communications; it must constitute the minimum practicable regulation to accomplish the state or local authority's legitimate purpose; and it must not impose substantial costs on amateur service licensees.

(2) Any state or local antenna restriction or regulation which, on its face or as applied, would limit amateur station antennas to

heights below 70 feet is presumed unreasonable unless the promulgating authority can demonstrate that such regulation is necessary to accomplish a clearly defined, and expressly stated health, safety or aesthetic objective; that there is no less burdensome alternative to the regulation; and that the Federal interest in efficient amateur radio communications from the amateur station at issue is otherwise reasonably accommodated.

(3) Any state or local authority, or other entity that wishes to maintain and enforce zoning, land use or other regulations or restrictions inconsistent with this section may apply to the Commission for a full or partial waiver of this section. Such waivers may be granted by the Commission in its sole discretion, upon a showing by the applicant that local concerns of a highly specialized or unusual nature create an overwhelming necessity for regulation inconsistent with this section. No application for waiver shall be considered unless it includes the particular regulation for which waiver is sought. Waivers granted according to this rule shall not apply to later-enacted or amended regulations by the local authority unless the Commission expressly orders otherwise.

ok, heres the story,
A friend and i built the "FM-25" yesterday. We turned it on and nothing.. So we looked at the troubleshooting guide, "check all the capacatators for correct poplaraty" so well what do you know i fucked up on C4. So i re did c4 which is a 10uF ec. tried it again, it worked! After a little while of use (1 hour) is just stoped. no nothing, just static. I was prety MAD. So i took a lot at the PCB, it looked fine, no bridges or anything. My friend lookd at it and held it in her hand.. It suddnelt worked again. After this i set it up again to play some music from my walkman while listinging from my stero system in my room. after the fm-25 stoped working again is was ovious something is really fucked up with it.. but it was geting late and she had to go home. So today i was resoddering all the parts to see if i could fix the problem...
It works again. Ok this is good, then it fucked up again! Dam i was pissed. so i started touching the underside of the PCB, where all the soddering connections are. it still wasnet working. Even though the light for "freqency LOCK" was on the transmiter wan't working. before the led would just be off.

i also have this problem geting stero on the fm-25 before the unit completly broke. any ideas?

Well im having trouble , should i send it in to be repaired for $36? Or just send in the BA1404 and the program IC's to see if there fucked up? i dono. well if you have any suggestions please e-mail me at critta66@shadow.net.

Thanx in advance

PS i can be reached on IRC (undernet) on #god or #troy

I'm going to disagree here.

Spectrum is unlike minerals, timber and other resources in that you can't
a) physically possess it
b) use it up
c) turn it into something phsically useful; ie, better communication is
the end-product you get with spectrum. You alway still have other
means of communication; the use of the spectrum begs the question
"does using this spectrum get me a level of improvement in my
communication such that I'm willing to use this spectrum for that
improved level of communication?"

>However, the
>government, through the F.C.C., has for so long controlled spectrum
>without following through on its obligation to allocate it to private
>citizens as property, that Congress now assumes it has the right to
>sell or lease this resource.

I'd not ascribe the situation completely like this. The FCC, for whatever
level of involvement in the current sell-off, isn't the real culprit here.
The Congress is, and for this reason: they've spent themselves into a hole.
A deeeeeeep hole. Now they're trying to find ways out of this hole.
Raising taxes isn't a very popular way, since it tends to get politicians
a short career. Spending less and saving money seems to be an anethma to
the political animal. So they're now trying to get creative and raise money
by selling off something which might generate lots of money due to the
perceived utility of same, but which won't really raise a ripple in the
ocean of public opinion.

Spectrum fits the bill quite nicely. Big chunks of money coming into the
coffers, no big complaints and they don't have to cut their spending
habits. How much better can it get?

>Even if one disputes the government's right to sell what it doesn't
>own, and even if one understands that public good is merely a
>catch-all phrase used by government for its own impowerment, all
>of this must be taken at face value and well-addressed in order to
>justify the use of Amateur Radio spectrum.

First, no one "owns" the spectrum. No one can. All that the government, or any government, can do is create an illusion that a licensee has exclusive use of a piece of the spectrum.

Let's consider this: let's say that you were given an exclusive-use license for some chunk (any chunk) of the spectrum. I decide, "zork you, I want to use it too." And I do so. However, your usage never encounters any interference from my co-incident use of the spectrum and you don't even know (nor does the FCC) that I've been using your chunk of the spectrum? Has your ownership been compromised?

Let's take this one step further: let us say that I do interfere with your use. And you take a complaint to the FCC, who then does nothing about this. Do you still own the spectrum?

My point with these examples is this: the government cannot grant "ownership" of the spectrum in excess of their ability to enforce your ownership. You can't enforce your ownership, especially in the first example where you don't even know that I'm using your chunk of the spectrum. Since spectrum isn't legally designated as private property, I doubt you could pursue a civil complaint against someone who chose to usurp your chunk of the spectrum.

Since the FCC is largely a toothless mouse now, the idea that the government is selling off chunks of the spectrum is kinda laughable in operation.

But as you point out, this mentality is something with which we must contend. And the contest is between Leviathan Inc. and the amateur service. Since we're not even using the frequencies in question, we're sort of short of arguments grounded in language that Leviathan Inc. can understand...

Special Event Information

HamDaze at Arizona Science Center: The Center for Amateur Radio Learning (C.A.R.L.) will be hosting HamDaze Weekend March 23-24, Several Phoenix area radio clubs will be setting up hands-on demonstrations and exhibits. Amateur Television, an HF station and a two way laser communications device will be just some of the attractions at the event. A test session will be available for the No-Code Technician License at 10:00 a.m. on Saturday March 23. KC7LUL will be on the air in the phone portion of the novice 10 meter band, and general 15 and 20 meter bands. For a certificate send a QSL and 9" x 12" SASE to C.A.R.L. P.O. Box 51048 Phoenix, AZ 85076-1048. Visitors to ASC will be able to make radio contacts under the supervision of licensed volunteer operators. The Arizona Science Center is located at 147 E. Adams. The hours are Saturday 9 - 5:00pm and Sunday 12 - 5:00. Adults $4.50, Seniors and 4-12 yrs old $3.50, 3yrs and less are free. For details call 561-8405.

Get a clue! The Internet uses the same electromagnetic spectrum that
everyone else in the world uses. Its merely in a bound channel rather
than an unbound channel.

You know what bound channels are, don't you?

I'll give you a hint: One type you like to put a pin through.

It wasn't a debacle--the ARRL is still proud, and still in control, therefore
it is good :-)

The US Amateur Population you cite, is probably based on Number of licensed.
But that number means even less, since people who died 10 years ago are still
counted. No-Coder teens who dropped out after 6 months of abuse, etc.

I don't have a circle. I'm basically inactive anymore. Your situation is
certainly different than I've found in my travels. I use to travel quite a
bit, and my comments are basically a perspective through experiance. Just
last friday I heard a teen trying to talk on the repeater (I usually listen on
the way home from work), and you could tell he was new. About four more
people (the channel clique) pretty much made him feel unwanted, and kept
changing the subject to the weather or something. Before you get to thinking
that I equate Ham radio with repeaters, I don't; it's just an example.

> There are people who aren't really amateurs, whose only purpose is to

> can beep or not).

I've heard that kind of crap ever since I got my ticket. I'm just a CB'er unless I get a Ham license. I'm not a real Ham unless I learn Morse code. I'm not a real Ham unless I learn Morse code faster. I'm not a real Ham unless I'm on SSB HF. I'm not a real Ham if I don't volunteer with the Salvation Army. I'm not a real Ham unless I go to church. It's endless drivel...

They are delinquent because they have no supervision, or organization.
The best idea would be to have the FCC issue all licenses to a club, and
the club will issue them to individuals. When the club gets complaints
about poor operators, they could legally revoke the license.

> Therefore, I propose that General Class and above be given all HF
> privelages, and that CW be abolished as a prerequisite to same. I
> further propose that all HF SSB, AM, FM and other means of
> radiotelephony operation be required to be by means of homebrew
> transmitters only.

You're dreaming. First of all, the frequencies are available because
of a population. Your proposal would cut the population to a few
thousand, and lose authorization. The FCC will not allow a small
segment of the population to control huge frequency blocks. No matter
how technical that population is.

My second view, is that AM, FM, SSB, FSK etc be abolished. At no time will
an Amateur operate on one frequency for more than 100 ms (milli-seconds).
Each band segment should be fully converted to Spread Spectrum. An agreed
on protocol for channelization.

It's sad to watch amateur radio kill itself with these petty arguments whose energy could better be used to save the hobby from the highest bidder, and it will happen.

Those of us who work as Radio Officers aboard ships laugh because you guys just don't get it. I see those who think that cw is hopelessly outdated, who think those of us who like using cw never use other advanced modes, all kinds of ridiculous and irrelevent arguments.

You can't argue cw has saved lives. I can give you countless examples, and yes recent ones like the Achille Lauro sinking. And save me the yiping about the Coast Guard discontinuing it, "Good riddance" is what we said to the coasties, there are plenty of commercial stations that still operate. Ships still use code boys and girls, for good reason. Listen to 500 khz, it's alive and well. When those digital modes and computers fail without ac power, good old charlie whiskey works EVERY time. I use the latest digital modes guys, including some you don't know about like a proprietary clover mode for HF telex. I can program in C with the best of 'em, so save me the high tech jargon as reasons to kill cw.

So you ask, what's that got to do with ham radio and cw? Plenty, I won't go backpacking without my HW-9, all the digital modes in the world, ht's and whatever can't call for help when they're out of range.

So quit the whining, it's giving the FCC and Congress the nails they are hammering into the ham radio coffin. You can't hear the pounding? Better quit whining then and listen and put your efforts into saving it before it gets buried by the highest bidder.

LW>Support "WOG". Written only General!!!
LW>

len, Tell me more about WOG! sounds interesting! Being a t+ with no
gumption to upgrade my code speed I would like to help support this!

3578. Wanted: Older Programmable Scanners

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-17 00:00:00 UTC
From: yonnie@sltrib.com
Message-ID: <314c8610.0@news.sisna.com>
Source record: 229414

I am interested in buying older programmable scanners,
Bearcat, Regency, Realistic, etc. If you have one you want
to part with, please email me with details.

Thanks,

Jon KF7YN

From: Dave Perkins <davep@cts.com>
Message-ID: <4ihj44$nh4@news2.cts.com>
Source record: 229532

Is there a site that lets one check DX addresses on the Internet
instead of buying another call book...I found one for North America but
for DX, that would be great..

Dave

>beeping test.

A real, meaty technical test would find this small percentage. No CW
required.

The current level of technical expertised found in the amateur tests is
very low, IMO. Something between the Advanced class test and the old 1st
'Phone test would be what I have in mind.

>The best we can do is find out who has the creativity and
>imagination to explore post hoc. What we don't want to do is turn off
>potential members of the group via irrelevant hazing or by fostering
>a perception of the service as backward.

Tuning across 2M, 20M or 75M phone these past few years can't help but
foster the impression in the newcomers' minds that the amateur service is
nothing but upscale CB. What is being done to clean this up? Nothing.

>But how are we marketing the code test free license? We call it derogatorily
>"no-code" and treat it as a beginner's license suitable for wives and girl

Huh? Huh? You're now trying to peddle amateur licenses with psycho-babble
and "empowerment"? I don't get it.

>There are a few engineers who are hams, and who beep furiously, but

>and project milestones. That sort of person isn't interested in the
>mundane, the old, the way grandpappy did it, sort of amateur radio
>found primarily among the beepers.

That sort of person isn't interested in ham radio anymore, period.
The Internet, computers and other widgetry seem to have soaked up most of those people and their expertise.

Further, the FCC stands in the way of any real experimentation with really new technologies in the upper bands. Let's say that I want to test a nifty new digital modulation. Can't do it until I chase down the FCC (which seems to be requiring that their employees be three-toed sloths to apply for work) and get a variance to allow the transmission mode. Wheeee... that sounds like fun.

Spread spectrum has been how long, and still it isn't out of the barn as a generally-usable modulation mode?

>If I had my way, the code test free class would be Extra, the group
>who should know enough to realize beeping doesn't matter, and leave
>beeping to the lesser mortals who don't know any better. (How's that
>for inflamatory?)

I think someone mentally traumatized you with a keyer when you were young and you're trying to seek your revenge. ;-)

If you claim that the CW test(s) are utterly without merit, then what is the point in having them at all? Why attach them to *any* license, whether to create an illusion of superiority or inferiority? If you truly believe that CW is obsolete, then it would no longer be something used as a metric of "goodness" in a ham ticket. Your proposal shows that you don't think of the CW requirement as being truely useless; you're merely interested in the perceptions the CW tests might foster, and not in whether or not it is the gating issue to getting the high-freq. bands in use, and thereby preserved.

As I've said: the elimination of the CW requirements hasn't filled up the VHF/UHF/SHF bands and the requirement for same hasn't kept the lids off the HF bands. I'm apt to agree with you that CW is irrelevant to the goals of the licensing procedure(s).

So let's say we eliminate it completely. Will the upper bands fill up?

I'm betting against it.

That's fine, and no one is saying you shouldn't have the right to master Morse if you wish, in order to satisfy some personal sense of challenge.

> I think it is a skill that binds amateurs together as
> a fraternity and not merely as a bunch of technicians.

This is where you go astray. The government is not operating a fraternity. The purpose of licensing exams is not to serve as a fraternity initiation. Would you think it proper if to attend a State (tax) supported university you were required to join a fraternity as a condition of attending class?

That's the problem you get when you attempt to mix institutional roles. The purpose of amateur exams is to satisfy legitimate government concerns about applicants wishing to operate in the regulated spectrum. Internal amateur social concerns should play no part in that.

That brings us to the crucial question, what legitimate government concern does a Morse speed exam address today? At one time, interoperability with life safety services was the concern, but that has become moot with the abandonment of Morse by the life safety services, IE Coast Guard. So what legitimate regulatory purpose continues to exist to require a Morse speed exam? If you can't answer that, then the Morse speed exam should be deleted. It is not legitimate for the government to impose arbitrary requirements for internal amateur social purposes.

>--Without frequencies, there is no Amateur Radio Service!

It is already happening...the question of banning HT's at the Olympics plus deciding that the Olympics will have no official amateur radio station shows that amateur radio is held in low esteem.

The best defense that amateur radio has is that we continue to be a pool of electronics experts and are willing to try new things. Amateurs greatly expanded the use of SSB before most other services, have some of the most extensive packet networks around such as the SE DX Packet Cluster covering 14 states, and proved that EME will work on several frequencies below 1296Mhz. Handling emergency traffic sounds nice but 80% of the worlds hams have no third party traffic rights..emergency or not.

We need to support ARRL and IARU as they are respected attendees and contributors to the WARC conferences.

73, Dave K4JRB

>Commerical Airline bands were totally different and not even close to
the
>FM bands.

You are receiving civilian air comms on the image frequency of your FM RX. The civ air band is 108-136 MHz. Your FM RX tunes 88-108 and probably uses a LO at (88->108)+ 10.7 MHz to convert down to an IF at approximately 10.7 MHz. This means that strong air signals at approximately 2*10.7=21.4 MHz above the tuned FM band frequency will come in. Your radio is an FM RX, the air comms are AM, so audio may be distorted or noisy. Example...if a local tower uses say 120.1 MHz, you might hear it at about 98.7.
Jim

3588. Amateur Radio Newsline - Melbourne Number Change Coming Up

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-17 00:00:00 UTC
From: wnewkirk@iu.net
Message-ID: <4ii4mu$8ag@cc.iu.net>
Source record: 229539

for those of you who get the amateur radio newsline from the Melbourne Florida number sponsored by the Collins Amateur Radio Club in Melbourne (KE4ZAY).. please note that in approximately 8-10 weeks, a new telephone system will be installed at the location where the answering machine is setup. at this time, it is unknown if there will be an analog line made available for the existing modem pool (where the answering machine is piggybacked on a never-answer modem) since the new switch may require centralization of this function.

also, all the telephone numbers at our site will be changing - we'll try to find out the situation ASAP and will post info about the availability of the service and the phone numbers when we find something out.

until then (around mid-may) the (407) 768-7447 line will be running.

Commercial Airline bands were totally different and not even close to
the
FM bands. <<

How close do you live to an airport? Maybe it is a harmonic that your
radio is picking up.

3591. HF, multiband antenna, etc. for beginner -- PLEASE HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-17 00:00:00 UTC
From: Isaac Kohn <ikohn@vertex.ucls.uchicago.edu>
Message-ID: <314CC3D3.347D@vertex.ucls.uchicago.edu>
Source record: 229542
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equpiment,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Greetings all,
I am new to the world of ham radio (don't even have my license yet), and I'm working on setting up a station. I'm gonna need an antenna to work at least the entire HF range, and maybe thru 2m. I live on the second floor of a 2-flat, and space outside is limited... I've been figuring I'd put up a loop around my ceiling (approx. 12'x12') or on one wall (similar dimensions), use a transmatch, and hope for the best. Maybe someone out there has a better idea... It would be convenient if there were a way I could wire something up in my room or (for lower frequencies) outside my window... It may not be practical to raise anything up above the top of the building -- will this affect propagation in the HF range?? I _may_ be able to find a way to set up a horizontal dipole that is supported a few inches above the edge of the roof, so that obstructions are less of a problem. Anyone have any suggestions?? Also, I will need plans for a versatile, INEXPENSIVE Transmatch. I can probably tolerate somewhat high levels of SWR, if it will reduce design cost. Is it feasible to wire several toroid-core broadband transformers, and switch them in and out appropriately for each band?? I'd like not to have to retune the antenna every time I switch bands, and if I could have a knob that did that it would be quite nice..... PLEASE RESPOND (pref. by E-mail or E-mail+post) IF YOU CAN ANSWER ANY OF MY IGNORANT QUESTIONS!!! Thanks a lot everybody.

73's
Isaac Kohn

P.S. I actually am doing things in the wrong order, as I haven't built any sort of equipment that would utilize an antenna yet. If anyone has any diagrams/ideas for a receiver, and maybe a transmitter, that I could use for phone (at least AM, SSB would be nice), they would be much appreciated. Receiver might just be antenna, tank circuit shunting unwanted stuff to ground, single-diode detector, and high-gain AF AMP. This is good because I've already built a 1W output AF AMP, and it works great. Xmitter is tough because I only want to use one oscillator, but I want to span entire HF range. Prob. with both is switching components in tuned circuits for different bands.... Help is much appreciated. As you can see I am very unexperienced and am dying to get on the air. Thx again in advance!

To all radio amateurs

SB QST ARL ARLB011
ARLB011 Vanity calls delayed

ARRL has learned that the FCC may delay until mid-1996 the
announcement of when it plans to open the first gate or gates of the
vanity call sign program. A Commission spokesman says the FCC first
wants to deal with remaining Petitions for Reconsideration it has
received. The FCC had been expected to announce opening dates early
this year.

FCC vanity call sign application Form 610V is now available, but the
FCC will not accept completed forms until it opens the appropriate
kfiling gates.

Prospective applicants can get the FCC Form 610V package by writing
ARRL, 225 Main Street, Newington, CT 06111. Please include an sase.
Form 610V also is available from the FCC via the Internet at
http://www.fcc.gov/Forms/Form610V or
ftp://ftp.fcc.gov/pub/Forms/Form610V/, or by fax at 202-418-0177.
Ask for Form 006108.

The FCC's Forms Distribution Center also accepts orders for Form
610V at 800-418-3676.

Just curious. Ham license is a FEDERAL license. How can a local non
government entity like the Atlanta Olympic Committee ban ham radios in
the area? Seems like if true something that should be taken up with
the ARRL and the FCC.

How many grandmothers do you know with 800 phone lines?

Worse than playing. Sounds like indirect harrassment of some
commercial entity. Stick them with a bunch of useless phone
calls that they have to pay for. And using newsgroups with a
large audience of collectors, bargain hunters, and wheeler-dealer
types that are guaranteed to call and leaving out any description
of the goods is pretty firm evidence.

The DBS 18 inch dish should do just fine for 2.4 GHz. Actually, with a good preamp it will even work for Oscar 13's experimental transponder. Back when it flew 2.4 GHz was real exotic territory. These days you can buy a 2.4 GHz transceiver from Icom (the IC-970 with optional band module).

Actually, what the DBS people have really done is to run high power.

We could do the same--a tiny quadrifilar helix will work just fine with 100 watts. A water cooled 2C39 easily does 100 watts on 1269 MHz. But, from a safety standpoint, lower power and a bigger antenna makes much more sense.

3597. SKYWARN Training Sites Updated

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-18 00:00:00 UTC
From: rob@eagle.dalton.net
Message-ID: <HAM-MISC.8EAA@eagle.dalton.net>
Source record: 229349

macedo@ici.net
---- Internet mail for unknown domain: 103253.236@compuserve.com

Hello to all...

Latest training site information....next update may not be until mid to late April...as Glenn Field will be away for four weeks.

Updated March 17, 1996:

Hello to all,

The following is a tentative list of training sites for the SKYWARN program this spring of 1996. THIS IS BY NO MEANS A FINAL LISTING. Many things are subject to change on this tentative listing but is being posted to give people an idea that things are moving and that training will be available. This listing is direct from Glenn Field...Warning Coordination Meteorologist.

It also lists presentations that I am doing for SKYWARN (This is not the same as training on these dates...it is more of an informational meeting for interest in SKYWARN and how to set-up a solid SKYWARN net.) and lists Severe WX Awareness Week and important happenings during that week.

****BARC Presentation postponed due to a scheduling Conflict!!!*******
****New Date of presentation will be presented here when finalized*******

Thursday April 18, 1996: SEMARA (Southeast Mass. Amateur Radio Assoc.)
SKYWARN Presentation at 7:30 PM
by: KD1CY Rob Macedo...SKYWARN TC.

Sunday April 21-April 28, 1996: Severe Weather Awareness Week

Dates to note during Severe Weather Awareness Week:

Monday April 22, 1996: Test Severe Weather Warnings for Connecticut.
Tuesday April 23, 1996: Test Severe Weather Warnings for MA/RI/South NH.
Thursday April 25, 1996: SKYWARN Strategical Planning Meeting at 6:30 PM.

NATIONAL WEATHER SERVICE TAUNTON MA OPEN HOUSE:

The National Weather Service in Taunton, MA will be holding an Open House similiar to the one held in June of 1994. At that previous open house... 3500 people showed up for a tour and literature on the weather.

This Open House will be offering the following:

--- A fully functional ham station demonstration...with information on SKYWARN.
--- Videoes and lectures on:

* NWS Operations
* Hurricanes
* Severe Weather
* Doppler Radar
* And More.
--- Literature on ALL forms of weather.
--- Tour of the NWS facility.
--- AND MUCH MUCH MORE.

The EXACT date and Times for the Open House are:

Saturday May 4, 1996: 10 AM-5 PM.
Sunday May 5, 1996: 12 PM-5 PM.

Further information will be available as we get closer to the event.

Training Dates by NWS Meteorologists:

Date Time Location

3/21/96 7:30-9:30 PM Morningside School Cafeteria
100 Burbank St.
Pittsfield, MA Capacity:100

Talk-in: 146.91/31 Mount Greylock Repeater.

Note: This training in Pittsfield, MA is being done by NWS Albany, NY
and sponsored by NOBARC...Northern Berkshire Amateur Radio Club.
You MUST pre-register...and the instructions to preregister are:
Call 518-869-6347 from a touch tone phone...select the option to
register for skywarn spotter training and choose the session you
wish to attend...you will then be asked to leave your name and
phone number.

5/6/96 6PM-9PM Tolland High School
Tolland, CT....Site Confirmed.

Note: Contact people for this site are:
KD1CY Rob Macedo SKYWARN TC Email:macedo@ici.net...Packet:KD1CY@AA1FS
K1PAI Roger Jeanfaivre...Connecticut SKYWARN Manager
Phone: (203) 563-1193...Roger has no internet or packet capability.
Talk in will be on the 147.000/600 Soapstone Mountain Repeater.

5/7/96 7PM-9:30 PM Northampton High School
Northampton, MA

Note: This new site in Northampton,MA has been finalized.

5/8/96 7PM-9:30 PM Greenfield Middle School Auditorium
Greenfield, MA....Site Confirmed.

Note: Talk-in will be on the 146.985/285 Greenfield, MA Repeater.

5/9/96 7PM-9:30 PM Keene State College
Keene, NH....Site is Tentative.

5/10/96 7PM-9:30 PM Daniel Webster College
Nashua, NH....Site is Tentative.

5/16/96 7PM-9:30 PM Walpole Town Hall
Walpole, MA...Site Confirmed.

Note: The Walpole site has a capacity of 100 people.
Contact W1ZSA Roger Turner @ (508) 668-2237 or myself...
KD1CY Rob Macedo @ (508) 994-1875 for further information.
Talk-in will be on the 146.895/295 repeater....no PL
Tone.

Possible site for training: The Fuller School in Gloucester, MA will be
available for training...date to be determined.
THIS WILL BE FINAILIZED BY MID-APRIL THE LATEST!!!

Again this is TENTATIVE and subject to many changes...and this product will
be updated as these changes occur.

73,Rob-KD1CY.

3598. Help: unlicensed bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-18 00:00:00 UTC
From: swu@eos.ncsu.edu
Message-ID: <4ijtbu$kso@taco.cc.ncsu.edu>
Source record: 229350

I need to find a list of showing all the unlicensed bands in the U.S.,
Europe, and Asia. I was told that the ones in U.S. are listed in part 15 of
the Code of Federal Regulations. But I have had no luck in the local public
libraries due to the mass volumes of the document.
For those in Europe and Asia, I don't even have a clue as to where to start.
Any info would be appreciated.
Please send me email at: swu@eos.ncsu.edu.
Thanks.

I don't think it even has to be a malfunctioning radio. Here's a real
story that involved me this past weekend.

I'm a pilot and like to fly gliders. I was in the 'office' of our gliderport
and the office radio was tuned to 123.3 MHz (AM), our air/ground frequency.
I turned my 2 meter HT on and keyed the mike to contact someone on a local
repeater (147.360+). The squelch broke on the aircraft radio. My HT, in good
working order, apparantly interfers with aircraft radios. The aircraft
I fly have navigation receivers in the 112-116 MHz region which my HT could
likely cause to go bonkers. If/when I'm instrument rated, ALL non-aircraft
electronics (receivers and transmitters alike) *WILL* be turned off if I'm flying
IFR. If the passenger doesn't like it, they can get out, right there, right then.
BTW, I was using a Larsen HT antenna thats a bit, but not much, more than a rubber
duck, its got about a 6 inch coil with a 6 inch whip on top.

Will I take my passengers word their HT is in 'good working order' and 'rumors
of interference are no more than like stepping on cracks in the sidewalk'...Hell
no if I'm in a cloud relying on the instruments...

"I'M THE PILOT IN <BOLD> COMMAND </BOLD>"...

> half of what's out there. Any help would be greatly appreciated!

Come up on 18.107 and listen for a while... things are always changing,
but you'll hear some action when the band is open. Try CO17M in Denver,
TI17M in Costa Rica, AND near Boston.

Try also 14.105 -- WR0S-7 and 14.103 -- W0TX-7, both near Denver.

By pulling a node list from each, you should be well on your way.

The time signal from germany is DCF 77, broadcasting on longwaves 77,5 kHz
but I have not other technicals informations about coding. But I have
informations concerning time signals send by the longwave transmitter
(France Inter) on 162 kHz from Allouis (France).

And thanks to the bozos in Tech Edit at ARRL you wont find a SHRED of mention about those swell GUNN diodes, or GUNNPLEXERS either in the ARRL Handbook- it seems some pedantic moron amongst the staff decided that we Amateurs should be using SSB on 10GHz in stead of WIDEBAND FM! THANKS GUYS! Ehhhhh...

Grumble, grumble...narrower isnt always better! Especially when it comes to filling up the spectrum! And justifing our allocations! And besides, who's STUPID IDEA was it to delete the GUNN effect and all mention of same from the HANDBOOK? ARRL are you listening?!!

I DEMAND TO KNOW THE NAME OF THE IDIOT WHO DECIDED THIS!

Christophe Marchal's Super Marathon

WE NEED YOUR HELP TO FIND PEOPLE TO MEET CHRISTOPHE THANKS

An educational project by Jean-Marc Dumont, English teacher at Lycee Gaston Febus High School, Orthez, France.

OBJECTIVES:

-To allow the pupils, through the use of Internet and the amateur radio station F6KGF,run by Gaston Febus' radio club, to follow the sporting exploits of Christophe Marchal, who will take part, in his wheelchair, in the Five Continents Marathon from 25 May to 16 June 1996.
-To bring together pupils and the handicapped
-To sensitize pupils to the possibility of surpassing oneself
-To make use of modern means of telecommunication
-To work with a desktop publishing package on writing in reaction to information on the Internet
-To allow our pupils to communicate with pupils in the countries Marchal passes through
-To introduce pupils to the wonderful world of Amateur Radio.

The classes

The whole school i.e. about 800 pupils aged 11-18, plus all the participating pupils in the countries Marchal passes through.

The subjects

This is a multi- and cross-disciplinary project; the majority of teachers from Gaston Febus are involved.

The schools involved

Lycee College Gaston Febus in Orthez, Tamalpais High School, Redwood High School and Drake High School in San Francisco, and several schools elsewhere in the USA, in Great Britain, Canada and Australia, all of which are linked by the Global Village project on the Internet.

Activation and Operation

As soon as Marchal arrives in a country, pupils from its schools will come to meet him and will communicate news by Internet or by amateur radio links if the Internet is not available. Pupils from Gaston Febus will then broadcast this news on news group pages (Global Village project), on their Web page on the Internet, on local radio, in the on-line press and in local newspapers, as well as to short-wave international radio stations - The Voice of the Andes in Quito, Ecuador, Radio Australia International, Radio

France International - either by Internet or by fax.

Project 'Amateur Radio Operator'

We will launch a National Appeal amongst amateur radio operators to help Marchal, himself a radio operator (F5TGY) to finance his project. The donations will be collected by the 'Association Basco-Bearnaise des Radioamateurs' in Pau, France. We shall work in partnership with the IDRE and the REF.

Activation and Operation

A national appeal will be launched to help Marchal to finance his project.
Various partners will be sought.
An Amateur Radio Operator's Diploma will be created.
The Amateur Radio enthusiast Associations of the countries visited will be brought into the project.

The F5TGY 'Association Basco-Bearnaise des Radioamateurs' Contest

To obtain the Five Continents Supermarathon Diploma an amateur radio station will have to contact at least ten stations in the country where F5TGY happens to be at the time. This means, for example that a station contacted in the United States can oonly be valid for the diploma if Christophe Marchal is in the US on the day and at the time of the radio contact. Completed logs should be sent before 30 July 1996 to F5RKJ who is the QSL manager and judge of the contest. This contest will run from 25 May 08:00 UTC until 16 June 15:00 UTC. Each station contacted will count for one point, two points if this station is in the town where the marathon is taking place ON THAT DAY. In the log reports, the date and time (in universal time) of contact and the town and call sign of the correspondant must all be noted. The same station may only be contacted more than once if on a different band each time.

TIMETABLE OF EVENTS

Friday 24 May 1996: 09:00 Departure Paris - London
Saturday 25 May 09:00 Prologue 15km in a London park
15:00 Flight London - Los Angeles (12hr flight)
Monday 27 May 09:00 MARATHON - Los Angeles area
Thursday 30 May 22:30 Flight Los Angeles - Sydney (14hr flight)
Sunday 02 June 08:00 MARATHON - Rainbow Beach area
Tuesday 04 June 09:20 Flight Brisbane - Darwin
Wednesday 05 June 23:00 Flight Darwin - Bali (3 hr flight)
Friday 07 June 08:00 MARATHON
Sunday 09 June 14:00 Flight Denpasar - Perth (Australia)
Monday 10 June 11:25 Flight Perth - Johannesburg (10hr flight)

Death of ham radio exaggerated

BY EDWARD ROTHSTEIN

New York Times

Few people would ever feel an urgent need to answer the question, ``What are the parasitic elements of a Yagi antenna?'' or to identify all the causes of ``splatter interference.'' Nor will many ponder ``the maximum authorized bandwidth of RTTY, data or multiplexed emission using an unspecified digital code.''

But that is because they have never longed to become a ham radio operator and never studied for the license exams that pose such questions. All I retain from my youthful goal to achieve ham status are a fascination with electronic circuits, memories of magazines with stories about transmissions in the midst of wars and earthquakes, and a useless ability to translate Morse code at fantastically slow rates of speed.

And one other thing: the magical feeling brought on by the sounds that emerged from these massive rigs with their lit dials, in which streams of pulsing sound emerged from the staticky ether. For at that time, nearly all amateur radio communication was carried on in Morse code. One operator I knew used a repeating paddle key to stutter out dots and dashes at speeds of 50 words per minute. He seemed to have almost musical ears as he discerned the messages encoded in streams of nonmelodic sound.

Now similar listeners are tuned not to the patter of Morse code but to what computers are making of the high-pitched screams of multiple modems making contact over the Internet. And the Net culture has grown out of a technology that seemed just steps away from the ham: garage-built computer kits had the aura of do-it-yourself mystery and mastery; they were clunky, intimidating, demanding expertise.

So there was ample ground on which the two cultures could meet. And they have. There, on the Net, courting paradox, the masters of short-wave transmissions are sending messages via bulletin boards, mailing lists, and sites on the World Wide Web. No code. No radio

waves. No schematics. No licenses.

The hobbyists of one old electronic technology are meeting on the grounds of the new one. But these are not always happy encounters. For in addition to the ritual discussion of hardware, some hams on the Net are arguing over what the new technology has done to their world. There are those who welcome it as an evolutionary force, and those who regret the passing of revered guild principles as new hams are being courted.

``In the next two decades or so,'' reads one recent post on America Online, ``which will be more important for communication -- knowing how to operate a computer and use digital modes of communication or being able to pound out code.''

``The real issue,'' counters another ham, objecting to easier licensing requirements, ``is the lowering of standards.'' Where has the Internet left ham radio?

``That is one of the key questions,'' confirmed Stephen Mendelsohn, a vice president of the American Radio Relay League, the nation's premiere lobby and hobby group with 172,000 members (and its own Web site: http://www.arrl.com). This group's very name speaks of a long tradition going back to its founding in 1914: the U.S. government set aside portions of the radio frequency spectrum for amateurs, who would, in turn, assist in emergencies, explore new technologies and ``relay'' messages.

Uncharacteristically, the government left the testing and licensing to the hobbyists themselves, who established grades from Novice to Amateur Extra -- each level granting access to more frequencies and requiring more knowledge.

There has been a tradition of pride in these accomplishments. Morse code was the first important digital form of communication, sending out clearly defined sounds that could pierce through the blistering static of early receivers. And the technical knowledge required meant that broadcasters could literally construct the equipment they used.

But this can now seem as quaint as the idea of a ``radio relay league.'' What use is Morse code and what purpose do radio frequencies serve when e-mail and chat rooms now attract even ham radio operators?

In 1991, in an effort to increase interest in ham radio, there was an easing of licensing requirements: it is now possible to get a beginning license without any knowledge of Morse code. Mendelsohn believes that by 1999, the code may be eliminated as a requirement even for the most advanced level.

I guess no one has heard of the Ground Wave Radar site at Cape Race, Newfoundland, Canada, operational since 1990 ? Actually, I am surprised the U.S. Army/Navy ROTHR site(s) was not mentioned here, either. The difference between these two that I have mentioned is that the Cape Race site is a surface (ground wave) system, implying vertical polarization and is for coastal long range surveillence. Otherwise, the ROTHR is horizontally polarized (a skywave system) and is meant for detections passed +500 km. Just-a bit-a trivia....

Fabe

Gilbert Baron wrote:

> Internet phone software is absolutely no threat
> whatsoever to the telephone companies.

Oh .. but it is.

The long distance companies are REALLY worried.
Think about it -- they regularly charge over $1 per minute for
international calls. With a 28.8 connection, for which you might
pay something like $0.004 per minute (permanent connection charge,
from a not-too-cheap providor) you can talk as long as you like.

If you use a dial-up connection, which obviously has implications for
being able to be "called" easily, the costs drop dramatically, for
example to $0.00042 per minute.

You BET they are worried.
Its exposing the real cost of telecoms, and they don't like it one bit.

Philip

Woops.. get a clue yourself. The FCC does indeed have some jurisdiction over
the internet since alot of the traffic goes across common carrier lines.

I generally reserve my amorous rutting for animate female humans, so I'm stumped on this one. Maybe if you clean up all the sticky stuff you squirted into your device at the culmination of your passionate throes it would work. I've never seen an FM-25, so I don't know if the designers made arrangements for cleaning after use, although surly they must have foreseen such an occurance. Maybe next time, you should wear a condom....

3627. FCC Electronic Filing!

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-18 00:00:00 UTC
From: n7ory@primenet.com
Message-ID: <4ikr8l$rm4@nnrp1.news.primenet.com>
Source record: 229439

I just found out that the FCC is doing some experiments with
electronic filing of certain radio services applications.
SMR, GMRS, BAS and IVDS..

Downloading and setup instructions can be found at:
ftp://ftp.fcc.gov/pub/Bureaus/Wireless/Public_Notices/pnwl6030.txt

You can find the software at:
ftp://ftp.fcc.gov/pub/Auctions/SMR/900/Programs

The filename is: elecv1.exe
And it's about 6.6 Megs long.

From what I gather so far, without trying it, is that it runs under
windows, and uses the modem in your system to make it's own PPP
connection to the FCC through a 202 area code number. To file an
application it's free, but to check the status of one, it will dial up
through a 900 number and the cost is $2.30 per minute.

Figures! Just as I weeded through the monsterous Form 574 for GMRS,
calculating my coordinates, scibbled through all of the info boxes,
and put down my signature, I find that it can be done electronicly!

Surfs up at FED?
I guess it pays to read the pnwl's and the daily digests huh?

3628. Please identify this Halicrafter.

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-18 00:00:00 UTC
From: soniat@prism.gatech.edu
Message-ID: <4ijm1r$qks@acmez.gatech.edu>
Source record: 229440
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Gentle Reader:

What is this radio, how old is it and should I repair or replace.

It is a Halicrafter.

It has a large half moon dial labeled Tuning (with the h symbol in the middle)
It has a smaller half moon dial labeled Band Spread to the right of Tuning.
It has Two large equal sized knobs one either side of the dials.
In the lower left it has an AM/CW switch (vertical slider) and speaker/phone
switch also a vertical slider.
In the center is has a four position pointer knob for band selection.
Too the right of the band select is a on/volume switch.
On the lower right it has a standby/receive switch (vertical slider).
The dials are covered with some sort of clear plastic.
The bands are labeled from the inside out in Megacycles .55 -1.6,
1.7 -5, 5 -14 , and 13.5 - 30. Some regions are labeled amateur and
some foreign.

It has two glass tubes, two small dark opaque material tube like
components in tube like sockets, and two metal encased tube like
components. It uses 110v AC. It was reportedly
functioning but that was over 15 years ago. There is not a number or
sticker on it that I could find. It has been painted so if there was
anything etched on the cabinet it would be covered. It doesn't seem to be
rusty but the rubber bushing that separate the chasis from the housing
are mostly gone.

Rating on a scale of 0 is run over by a truck and 10 is new this could
be a 3, in other words it ain't pretty. My interests are somewhat
sentimental but my funds are limited, if I could buy a similar radio
with more modes for the same money I would seriously consider it but I
would like to get this working again.

Any thoughts.

Ed

From: buydens@duke.usask.ca
Message-ID: <4ikmc4$dfd@tribune.usask.ca>
Source record: 229441

I should first qualify this message with the disclaimer that I do not have an advanced license so take my advice with caution. However, since nobody else responded I will try to help you.

It seems that what you want to do is connect the output of your computer speaker to your radio. The most important problem you will encounter is that your radio will be expecting an output from a microphone and the output from your computer will be considerably stronger than that. Also you will want to match the impedance of the radio input to that of the computer speaker. (Computer speakers are normally 8 ohms, but I don't know what microphones run around.) I think you will need a combination of a resistor and a transformer. You will need to look up the specifications on the input to your radio to determine the ratios of impedances. You could also attach a volt and ammeter to your computer speaker to determine the amount you need to reduce the output of your computer to make it safe for the radio.

Sorry I can't help you more.

In 1973, HAL Communications Corp. sold an MKB-1 Morse Keyboard and a KB-ID1 Keyboard Identifier. Does anyone remember these devices?

After building them from kits, they worked well. Recently I tried to change the call sign in the Identifier without success. There appears to be a race problem in the design.

Does anyone remember these devices? -The problem that makes the Identifier pattern sensitive? -A fix?

^^^^^^^^^^^^^^^^^^^^^^^snip -to-fit^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

Paul,

The aircraft band is right next door to broadcast fm music band. ADD your fm receiver's 'IF'- frequency (some times 20.x MHz or 10.xMHz) and with a strong enough signal from a aircraft right overhead, you may get a "mix".

Your aircraft can 'mix' with your desired station +'IF' and there you have it. Often even more magic is involved... where two signals transmitt at the same time and mix down to your fm receiver. Infact there is a very obscure program (no I don't have it) that calculates where the offending signals are and next is to build a filter to trap out at least one of the offenders.

The cure? Add a external FM Antenna... the better fm antennas look much like a TV Antenna, except the elements are almost all the same length... Use 300 ohm 'twin-line' to feed the signal to the set. Twist the twin-line as it passes from antenna, all the way to the set.

What? No screw terminals for the two wires? Then try a random 'long wire' antenna with a alligator clip on the business end and clip it to your whip antenna! You may need to move the long wire around till you find the best signal. This should provide a stronger signal from you FM station and hopefully swamp the front-end with 'desired' signal.

Weinguard makes a FM PASS filter (75 ohm coax 'f' fittings)... this signal loves the FM Brodcast band and tries it's best to reject other signals above and below the band. Cost, about $12, retail. I can't vouch for the quality of a Radio Shack equiv. More elabroate 'tunable' 'notch' filters can be had, but for lot's more money for one of quality.

Hope this helps!

Absolutely, I meant to mention this as well...The bottom line is my HT and
the aircraft radio I mention in my earlier post are simply not compatible at
a distance of 10 feet. Maybe theres nothing wrong with either radio. Maybe its
just an "intermidiate frequency" coincidence, maybe its a less obvious coupling.
Who knows? Falling from the sky like a sack of wet cement is no
place to discover things like this. I'm flying from Denver to St. Louis later
this week (TWA). MY radio will be along for the ride, in my luggage (maybe carryon)
with the antenna and battery removed. I'll have plenty of time to play with it
in St. Louis, and can listen to traffic at a couple airports from my living room
whenever the mood strikes anyway.

If you have the optional FTS-26 board ($59), you can somehow adjust
the modulation from the keyboard (according to Yaesu Tech Support),
but I don't have the board or the documentation.

> I don't think I have a problem with too much modulation however.

If people don't report that you have a "hum", then you're probably okay.
Ask someone, they may just think you're driving a diesel :-) And try
it on simplex since your local repeater may filter CTCSS.

3635. MOTIVATING HAMS TO UPGRADE

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: fmorris@prysm.NET
Message-ID: <9603191807.AA29342@pti.prysm.net>
Source record: 229298

We are trying to find ways to motivate hams to upgrade. We have already lost one local club to the No-Tech Techs.

There is no doubt that you can't make anyone upgrade due to the fact that you have to have the desire and willingness to put the time into upgrading. It is one of the things in life that you have to earn and it is not given to you. But the benefits are far greater than the time required to upgrade.

Can anyone share with us what they have done to motivate hams to upgrade?

: If close enough, it will. I have picked up CB radio transmissions (Also
: AM) on a nearby FM reciever.

"AM rejection" is a spec which applies to FM radios. It is worse on
cheaper ones.

The circuitry used to detect FM signals can respond to changes in the
amplitude. Especially when the circuit is cheap, and under conditions
where it is overloaded.

I built my QRP station from scratch - go ahead, tell me I'm a "simple mind". I'm beginning to think about designs for an all-band, high-performance HF station. It will be QRP, with outboard QRO capability. I just finished gutting a base-station CB rig that will contribute a nice box and a few bits and pieces to this project.

>in QST, but a computer is eschewed. In the field, a palmtop isn't a MAJOR
>cramp either, fits in a shirt pocket and runs for a week on 2 AA batteries.

Except for the fact that you have to buy it and learn how to use it. Up to this point your entire station has cost about $100. How much does the computer add? Is it >> $100? Then it's a MAJOR cramp. Do you have to add a (> $100) controller box? Do you have to learn new software? Will the computer need extensive RF choking and shielding added to make it useable next to a radio? How many ounces (remember, we're backpacking) do all the interface cables and hardware weigh? Sorry, but there's just no way around all this to do what you're proposing.

>an improved coding and modulation. Especially in the field where you're
>further handicapped by relatively poor antennas, it would seem that
>taking advantage of the 13 db or more of processing gain you can achieve
>with better codes and modulations would be a big help.

Yes, and it would seem that taking advantage of that processing gain would make telephony obsolete too, wouldn't it? Yet I don't see too many folks putting away their microphones. Simplicity, convenience, and a large user base = substantially more fun per $. Again, my friend who's getting into QRP now is just plain not interested in running state-of-the-art digital signal processing from the family tent. A simple CW or SSB rig is entirely adequate to make a few contacts and have fun. Oh BTW, he's an Advanced class licensee, been in radio for >30 years, and is mainly interested in UHF and microwave. He knows all the tradeoffs we're discussing, and knows most of it is inapplicable to the intended use.

Elitism comes in many forms... some would exclude those who can't beep at high speed. Others would exclude those who "can't or won't do any better than 'simple'". Either way, it stinks, and scares off newcomers. How do you expect people to learn about radio if you won't let them use and understand basic communications? Why must every application push the SOTA, when perfectly adequate, cheap, uncomplicated hardware exists? How many folks do you think can spend hundreds of dollars to contact the few existing digital stations

out there for a hobby? Lighten up.

3641. Licence renewal

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: nhoop@centuryinter.net
Message-ID: <314ee285.4902001@news.pc.centuryinter.net>
Source record: 229304

Hi,

I've had my "Advanced" licence since 1988, but have been inactive for awhile...and have moved.

I don't need to renew for awhile but what's the easiest way to get the appropriate form for change of state?

Thanks,

Nat Hooper WD4BJB
Oxford, Arkansas

Nat Hooper

A man has to think. I think I'll go throw a stick.

3642. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4in759$hrv@lyra.csx.cam.ac.uk>
Source record: 229305
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

* Following discussions last year the full collection is
* not now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
19 March 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1956 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.
See also http://aviation.jsc.nasa.gov/alphabet.html, which
includes information about pronunciations)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

(See also http://aviation.jsc.nasa.gov/old-alphabet.html)

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info. On the World Wide Web you can find
copies of the postings and some further material at:

http://www.cl.cam.ac.uk/users/bck1/menu.html

Well, I figured I may as well make a comment or two here... 8-)

In article <4htge7$g2h@news.theriver.com>, kc7gnm@theriver.com done said...
>
>In <4hqq5o$64r@news.interpath.net>, Don Schreiner <don@interpath.com> writes:
>>
>>If Atlanta is asking for Amateur Radio help for the Olympics, but
>>simultaneously disallowing radios, this could put a crimp in communication.

>I think hams shouldn't help them until they lift that silly rule. If they
>want our help, they should let us bring our radios and such into the
>stadium.

I thought I'd plunk down into the middle of this gentlemanly discussion, feeling somewhat qualified to
open my trap since I was Deputy Commissioner of Communications at the 1995 Special Olympics World Games last
July in New Haven, Connecticut. I was responsible for all aspects of ham activities, and ultimately
"boss" of more than 500 volunteers.

Believe me, an event of that size, which was the largest scheduled event in the world in '95, was a
communication nightmare. Most of the RF systems were provided by the Department of Defense, and that made
sense, since the event brought out delegates from almost every country, and even our President and his
family. The last thing I wanted was to be asked to provide ham radio communication in any potentially
critical areas where commercial two-way radio systems could provide equal or better functionality, and
ensure that hams wouldn't be blamed if anything distastrous did happen!

Actually, we were pressed into action in several areas that had not been planned in advance, and we kept
our main operations "separate" from the routine official communication; ie, we ran two NTS traffic booths
and a nice special-event station on the main midway, and provided ATV for the sailing events.

Now, there sure is a lot of differenec between Special Olympics and "plain, old, regular" Olympics,
particularly money and media coverage, but I advise any who plan to participate to keep in mind a few key
points:

1) Hams are NOT the focus of the event--it's about athletics and politics.
2) No matter how much time, talk and money goes into planning, behind the scenes it's guaranteed to
resemble a completely insane, chaotic zoo, once things get going. (During the Special Olympics, from the
management level on down, we had an affectionate buzzword for the entire event: "Massive Clusterfu--.")
3) Don't wait for anyone from the Olympics to answer any questions. When we waited for Special Olympics
bureaucrats to make any kind of trivial decisions, we may as well have dropped dead. When something really
needed to get done, we just acted like we knew what we were doing and we did it. Period.
4) Most of the organizers don't have a clue about Amateur Radio. Don't worry about that. Ignore that.
There will be a few people who do know about ham radio, and if they're know enough to ask for hams'
assistance, they'll ask. Otherwise, don't bother beating your head against the wall.
5) If you are asked to provide any communication service, either (A) Refuse to accept any position where
you're in charge of anything, or (B) Stock up on Prozac, Valium and Jack Daniel's.
6) You may find that your most valuable contribution comes in manning commercial-band radio gear, and
never emit a peep on the hams bands. Fine. So what? The key is to show 'em that amateurs Know What They're
Doing.
7) After more than a year of advance planning for the week of the World Games, there was still a TON of
stuff we didn't, nor could have, planned for. This is a MASSIVE undertaking, and you sure shouldn't expect
to be viewed as a major part of it.
8) Don't whine about it if they don't want random amateurs--and anyone else--wandering around with
hand-held radios, scanners, etc, on their persons. The RF situation can be truly chaos even with what they
"plan" for; no need to add to it. We had to coordinate--and prevent intereference between--commercial/government frequencies, Secret Service, FBI, police, fire, ambulance, cellular,
etc...including dozens of temporary repeaters and other junque. It wasn't easy and it wasn't fun.
8) Hams are NOT the focus of the event--it's about athletics and politics.

I don't feel like going into a ton more detail about philosophy and the politics of such an event, but if
anyone can think of any specific technical or operational question that they need answered, and believe that
my experience may be worth the electrons it's carried on, drop me a note or give me a call.

Meanwhile, good luck to all, and success to the athletes and volunteers at the 1996 Olympic Games in
Atlanta!

3644. Old QST indexes - help!

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: Michael Tracy <mtracy@arrl.org>
Message-ID: <314F4905.4848@arrl.org>
Source record: 229307

Hello all. I am in need of some older QST indexes to help us locate particular articles for folks that contact the ARRL looking for old article reprints. It seems that I have exhausted my local resources on this and now I need to ask a wider audience for help. The indexes I need copies of are:

Volume VI (August 1922-July 1923)
Volume VII (August 1923-July 1924)
Volume XV (1931)

These items were separate from the magazine and we do not have any copies of them. I think that the 1931 index may be part of the 1932 one, since the 1932 index we have states "Published in two sections of which this is Section II".

If you have any of the above or know someone that does - please let me know.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

```
: CONGRATULATIONS! You have invested many hours/days learning a
: skill that is as useless as it is outdated! Should I send you some
: info. on how to build a spark gap transmitter?

Not true at all. Not only is code important, but it is obligatory to
operate on HF bands worldwide. It is not only used for Hand keys, but
for beacons, and other identifying devices in the navigational spectrum.
As well as for wx and other broadcasts, still more important than
talking to Grandma.
If you want to be a serious radio operator, you should learn Morse Code,
and not because you can use HF phone bands. You need the code,
and any amateur worth his salt already knows that anyway. Incidentally,
most amateurs have priviledges because one day they hope to turn Pro, or
already are, and want to experiment. Code is as instrumental in radio
as knowing how to call cq, and if you don't want to learn it, stay off
of HF, and get a phone.

Hi all:

I'm a SW newbie and have found this entire thread highly instructive. But like any good student after a professor's lecture I have a question. Why do FM radios use this "image frequency?" Why not use circuitry that tunes directly into the desired frequency? In other words, what's the image frequency used for and why?

Many thanks,

J. Guy Stalnaker

Ken A. Nishimura <kennish@kabuki.EECS.Berkeley.EDU> wrote:
>OK, here's a clip from the NYT -- of particular interest
>is the last paragraph -- Steve Mendelsohn is VP of ARRL.

Yes, it is interesting. Notice he makes a fairly safe statement though. Another way of reading it is that he believes there is a possibility that the code requirement will be dropped by 1999.

Notice also the tone of the article, and how amateur radio is portrayed. I find this interesting as well. Mostly historical perspective, but not showing much relevance to the here and now. I wonder if this is how most people out there perceive amateur radio?

I actually found the second to the last paragraph more interesting - and distressing. He describes the Amateur Radio Relay League as "quaint", and asks the what purpose do radio frequencies serve, in the same sentence as "what use is Morse code". There are certainly other ways of looking at this, but one thing is for certain; amateur radio will likely not persevere in it's present form for long if the perception by the general public is that we are a just quaint little group who wants to perform historical reenactments of an archaic communications mode, while taking up a huge piece of valuable spectrum.

We had better take a hard look at what some of the most successful Washington DC groups have done to protect their interests. The National Association of Broadcasters might be a good archetype. Look what the NRA has done to increase their power - they've increased their numbers. We need more folks on our side - more people who know what amateur radio is about. Maybe the time for a written-only license is just about here.

Amateur radio isn't for everybody, but maybe we need to make it appeal to more people than it does now. Perhaps we need to get rid of this tape on-the-glasses/pocket protector image we have somehow. What other images do ham radio operators conjure up? Huge towers in the back yard; old guys who never come out of their house and disrupt everybody's TV. These are not the kinds of things that endear us to the general public.

Now I know that isn't REAL ham radio. The people are great - it's a great community with an enormous variety of talent and interests. And on average, I think we're a pretty smart bunch of guys and gals who enjoy the outdoors and group activities, as well as late nights and rainy Saturdays by the radio. It's a tinkerer's hobby - for people who like to build things, it's a social outlet for people who just like to communicate with others, and it's a service to the public.

I believe the amateur spectrum IS a "National Park". If there were no preservationists, or no greater public good served by the National Park System, we would have no such system. The amateur RF spectrum is a kind of natural resource that is not expendable, and which must be managed. It must be preserved so that it can continue to be enjoyed in perpetuity by the people of this country. It must not be sold to the highest bidder for commercial enterprise, just as the National Parks should not be sold.

If we continue to be perceived in the way exemplified by this Times article, we need to work on our public image.

The Massachusetts Emergency Management Agency has established a Web site. The latest information on the Northeast Regional All Hazard Conference, June 26-28, 1996 in Boston can be found there.

The URL is http://www.magnet.state.ma.us/mema

Please direct your telephone calls on this conference to Mr. Kevin Tully, Area 1 Director, Massachusetts Emergency Management Agency, (508) 640-9500 Fax (508) 851-8218.

=========
On a side note.... I am looking for hams that are either ARES or RACES afiliated who might be interested in manning a Amateur Radio booth at this conference. We are looking for those who might be willing to show portable packet operation as well as APRS. Also looking for those that may have setup portable repeaters to be brought into a site and used in an emergency event.

Please contact me if you are willing to come and join us, show off your skills as an emergency communicator and fabricator! Please e-mail me at this address or at tstader@i2t.com.

Terry Stader - KA8SCP/1
MEMA Area 1 Communications/RACES Officer

I've had many conversations with non-ham radio professionals, and these guys
almost uniformly express the opinion that amateur radio is quaint because of
the code requirement. I know as well as anyone that CW is required for HF
access and not the more commercially useful VHF and above bands, but the
perception of amateur radio among non-hams seems to be that we're all
retro-technical Luddites tapping away at Morse code keys. This isn't the
truth, but the apparent fixation on the Morse requirement helps further
this perception.

#god + #troy .. now hear this!

A completely different approach might have got you oodles of help!
When the situation demands it, I can also blister the air blue. It helps alleviate the pain and frustration and/or is excused because it was delivered with such wit and good nature as to be forgiveable.

What you do appears to be to seek attention (pathetic!), or to troll for flames (this time you got some!). My kids read my screen too, and I resent having to explain to them that the foul-mouthed norms you have adopted are characteristic on any channel that has a wide audience, and are unrepresentative of the rest of us. (eg. - repeater usage).

Jeez - I don't even know what "undernet" is... maybe it's time to do a little slumming!

73's ??? naah, the concept is wasted on you.
88's as appropriate ??? OK - I gotta place (I'll show you where!)

To everyone who has replied to this thread, Both to the group as well as directly to me, Thanks. I was reminded today by a friend that there are times for contect-style QSO's. Thats right, during contests.. But thats not the only place. When a station that is needed by many people common sense and courtesey dictate that you not ragchew. By all means give a real signal report and say some pleasent.. Your signal 57, Thanks from John in Minnesota. If the station at the other end wants to chat more, let them ask you the next question. And the last case. When the station at the other end (or your end) has limited use of the language. Get a copy of the ARRL's HOLA CQ and try a spanish QSO. Its fun and you'll be suprised how much fun you can have. If anyone needs sources for foreign language radio guides, let me know. I have quite a bunch.. Thats all for now. 73 de N0ISL....

3660. TTL/RS-232 converters

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: todd@tj.org
Message-ID: <4inamj$t4u@news.scruz.net>
Source record: 229323

I'm in the market for a pair rig-to-PC interfaces (TTL to RS-232 level converters), one for a Yaesu FT-736R and another for a Kenwood TS-950SD. I called the local HRO store to inquire about prices and availability and was absolutely astonished to learn that they want $110 and $120, respectively, for these little beasts. I assume that this is in the ballpark of the MSRP, and that the other major suppliers will have similar prices.

I recall seeing ads in the past in QST for several third parties offering these interfaces in the $40 to $50 price range, but after pouring through the last three issues, I've come up dry. Can anybody give me a pointer?

KB6JXT, Todd

P.S. Please excuse what may be a stupid hardware question from an admitted software geek, but us there any possible justification for a $120 price tag on an item like this? Seems *way* out of line to me....

Believe me there are many thousands of hams in the same predicament today.
The media are masking the problems. Americans have been in debt up to their
eyeballs
for decades now and the chickens are coming home to roost!

Not much call for component level techs these days and trying to
>get a toe in anywhere in the computer field seems next to impossible
without

Eaxactly, and if there ARE such jobs they pay peanuts because of the influx
of technically skilled immigrants, and the loss of American manufacturing
electronics firms to overseas
competition. Free trade versus protectionism is a really interesting
dilemma for us now!

>programming and/or network skills. They don't take PC hobbyists, even if
>you've been building the damn things for 10 years.

Yeah - it's a wicked system. The educational system is a hazing ritual too
rather than a
real preparation for the working world.

>It's tough to "keep the faith" in these lousy times.

That's the truth Jim. I hope things get better for many of us.
Years ago, hams used to help one another in education work etc., but today
is not the same
thing at all. Used to be that if you were a ham, everyone knew you were an
honorable hard-working
person. Today a ham might be an idiot drunk who cusses all night on 75m SSB

with impunity
thanks to our toothless FCC and general societal collapse. What can be
next?

I don't think there is any point in trying to make a silk purse out of a
sow's ear. He should go get a decent radio receiver rather than try to
patch up a poor one.

Also, it may help more to decrease the signal strength rather than
increase it.

Anthony O. Cardenas ~ WA6IGJ (cardenas@kaiwan.com) penned:
: petern@terraport.net (Peter Neidhardt) wrote:

: >I own a cheap General Electric boombox... I am on a certain FM channel
: > I intermittenly pickup actual radio transmissions from overhead commercial
: >airliners...
: ^^^^^^^^^^^^^^^^^^^^^^snip -to-fit^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

: Paul,

: The aircraft band is right next door to broadcast fm music band. ADD your
: fm receiver's 'IF'- frequency (some times 20.x MHz or 10.xMHz) and with a
: strong enough signal from a aircraft right overhead, you may get a "mix".

: Your aircraft can 'mix' with your desired station +'IF' and there you
: have it. Often even more magic is involved... where two signals transmitt
: at the same time and mix down to your fm receiver. Infact there is a very
: obscure program (no I don't have it) that calculates where the offending
: signals are and next is to build a filter to trap out at least one of the
: offenders.

: The cure? Add a external FM Antenna... the better fm antennas look much
: like a TV Antenna, except the elements are almost all the same length...
: Use 300 ohm 'twin-line' to feed the signal to the set. Twist the
: twin-line as it passes from antenna, all the way to the set.

: What? No screw terminals for the two wires? Then try a random 'long
: wire' antenna with a alligator clip on the business end and clip it to
: your whip antenna! You may need to move the long wire around till you find
: the best signal. This should provide a stronger signal from you FM station
: and hopefully swamp the front-end with 'desired' signal.

: Weinguard makes a FM PASS filter (75 ohm coax 'f' fittings)... this signal
: loves the FM Brodcast band and tries it's best to reject other signals
: above and below the band. Cost, about $12, retail. I can't vouch for the
: quality of a Radio Shack equiv. More elabroate 'tunable' 'notch' filters
: can be had, but for lot's more money for one of quality.

: Hope this helps!

: Tony

fair amount of errors here too...but overall not too bad of an article.
one problem with the idea that the network will replace radio is that
the network costs money to be connected, radio has just the equipment costs.

and the arrl did come out with their own limited no code proposal - wasn't the
one the fcc picked up but they had one..

and we've had a code-free ham ticket for 5+ years in the US and the sky hasn't
fallen yet...

Whoa guys!

We all agree that it is an image. That's a given!

But putting a bigger antenna on it won't help! If you were standing next to a jet engine, would you cup your ears to hear it better? Or would you cover your ears?

If it *is* causing non-linearities in the front-end, overloading it even more is not going to help (why do you think they put the -20dB switch on good receivers?).

Try *collapsing* the antenna, or move it around. I know it sounds strange, but it does work. I lived directly under the path of SFO's main runway for 20 years and I have experienced almost every type of interference from airplanes. Cheap radios always received them. With high quality receivers, you usually would hear a slight drop in audio level. Like the noise, you just have to live with it. Cheap RFI filters simply don't work.

The tuners front end contains the resonant circuit which is supposed to favor the intended signal (101.7) and reject the un-intended ones (123.1). In cheap radios, this circuit is not very good, so the rejection (selectivity) goes to pieces. The quality of the IF stages also has a lot to do with it.

If the radio has a image rejection of 20dB, that means that the airplane signal has to be at least 100 times more powerful than the FM station to "break through". Easy to do when the airplane is right above your head and the FM station is 10 miles away! Capture ratio sez it only takes a dB or two to override the intended signal. And it does it!

Your best bet is to try another radio. Some *are* better than others.

On Mon, 18 Mar 1996 11:06:42 -0600,
in newsgroup rec.radio.scanner,
Isaac Kohn <ikohn@vertex.ucls.uchicago.edu>
from Ripco Communications, Inc. thoughtfully posted:

>There is a small, minor detail: Air transmissions were AM, last time I
> checked!

They still are!

>How does an FM receiver with poor-selectivity receive AM
> transmissions???

FM detectors are capable of detecting AM signals through "Slope Detection". In a nutshell: If you tune a FM detector off to one side, you can detect AM. When a FM detector is tuned "dead-on", it will have the most AM rejection. When it is tuned off resonance, to where the signal is now riding up-and-down on the steeper outer slopes of the detector curve, you create an AM detector (the detector curve is "bell" shaped) Some cheap one IC AM/FM radios use the same detector for both AM & FM, utilizing slope detection (Note that you have to disable any AFT circuits, as they will attempt to follow the signal and keep it centered).

My partner and I are using the Ramsey FR-146 2-Meter FM receiver kit to receive data broadcast at a frequency of 155.445 MHz. The data is sent with a 6 second delay between each new message. We are having trouble squelching out the noise during the 6 second delay period. The squelch seems to either cut out nothing or it cuts out everything including the data being broadcast. If anyone has any information regarding this kit or where we could receive help, we would appreciate hearing about it. Please e-mail any comments or suggestions.

Thanks.

I suppose you can paint any picture you want to point out the
advantages and disadvantages for each communication mode. Suggesting
that the only way non-CW digital communications can be done is with
"a laptop, a multimode controller, and a synthesized 100 watt
radio, maybe a 400AH lead acid battery" is putting a decided spin
on the facts. The fact is, a slightly modified HW-9 with a palmtop
computer (i.e., an HP 200, the size of a calculator) is closer
to the "HW-9 and two wires" scenario.

>: One uses what one has at hand, but to refuse to use an available
>: and better technique is very questionable.
>
>but you need to address additional issues such as cost, weight, power
>consumption!

This is true, but don't automatically jump to the conclusion that the
simplest configuration is always the best configuration. The most
effective communications take place when one plans ahead, and, when
one plans ahead, the selection of equipment and mode is considerably
more flexible. You can ask the question "What will work best?" rather
than "what will work at all?".

Hey, I appreciate this, I really do. I just happen to think that selectively
excluding certain kinds of radios, if that is indeed being done, tends
to undermine the validity of this argument. If amateurs are told not
to carry handie-talkies, but non-amateurs are permitted to carry
cellular telephones, I really have to question the "logic" behind
the decision.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 MARCH AND FORECAST FOR 20 MARCH - 22 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 18 Mar
Daily Proton Fluence >1 MeV: 3.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.3E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Mar 21 Mar 22 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Mar: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled.

Estimated Indices : A K Observed A Index 18 Mar
Learmonth 14 2333 3333
Fredericksburg 10 9
Planetary 8 8

Observed Kp for 18 Mar: 3313 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
20 Mar 8 Quiet to unsettled
21 Mar 8 Quiet to unsettled
22 Mar 10 Unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
19 Mar Normal Normal Normal-fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
20 Mar Normal Normal Normal-fair
21 Mar Normal Normal Normal-fair
22 Mar Normal Normal Normal-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
19 Mar 1

Observed Australian Regional MUFs:
Darwin: near predicted monthly values.
Townsville: 15% depressed until 10UT, then near predicted
monthly values.
Sydney: 15% depressed until 05UT, then near predicted
monthly values.
Hobart: 15% depressed.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
20 Mar 5 near predicted monthly values
21 Mar 10 near predicted monthly values
22 Mar 5 near predicted monthly values

sciencepark@ccub.wlv.ac.uk (anonymous) writes:

> I'm interested in the radio ham aspect but can anyone tell me the details of
> the class1 and class2 test that you have to undertake in order to get
> the licence.

I've cross-posted this to uk.radio.amateur - the rec.radio.amateur.misc group, while appropriate, is worldwide, and I suspect that the UK-only group may produce a more helpful response.

As I understand it, there are 2 classes of UK amateur radio license, not counting the novice licenses, which I know nothing about :

Class B: You need to pass a multiple-choice exam. This is currently 2 papers, but will be replaced by a single longer paper fairly soon, I think. The questions cover radio theory, interference and how to eliminate it, operating practices, and the licensing conditions. The class B license allows you to use all modes (I think - there used to be a restriction about morse code, but I think that's been removed) on all amateur radio bands above 50MHz.

Class A : You need to pass the same multiple choice exam (or hold a Class B license, I guess) and pass a morse code test. You have to send and receive morse code manually at a set speed and making less than a certain number of mistakes. This license allows you to everything a class B licensee can do _and_ use the HF bands (1.6MHz - 30MHz, I think).

A question for others : After the change in the exam, will class B licensees who then pass the morse test be granted a class A license, or will they have to take the new written exam as well ?

>Can you also recommend a really good book or source which could tell me about

The books that got me through the Radio Amateurs exam were published by the RSGB (Radio Society of Great Britain) - I can't remember the titles, but 'How to pass the RAE' rings some bells. There's also a book of sample questions that's worth going through.

The RSGB also produce other more general books on amateur radio. The Radio Communication Handbook and the VHF/UHF handbook are both worth reading, although they're a little out of date (I have nothing against valves, but a few designs using IC-based synthesisers would be nice).

Can anyone recomend a book on getting started with operation, though? I've some old PMR stuff that I can get onto 2m or 70cm quite easily, but I'd like to know the correct protocol for using it when I finally get it

working.

> the various codes and call signs and general protocol involving ham
>radio. Is ham radio able to be connected to the internet via computer.?

The UK license only allows messages to be passed between licensed
amateurs, so you can't (legally) send and receive internet e-mail AFAIK.
There's packet radio, but I don't think there are any gateways between it
and the internet.

>Thanks.

There are a number of gateways in the USA which allow licensed UK amateurs
to send email to packet radio addresses and to receive the packet replies
via email.

There's less chance of interference between 150 MHz and 850 MHz than
there is between 148 MHz and 150 MHz. I've been in situations where a
whole mass of radios, some 800 MHz trunking, some hams, some 150-155 MHz
public service, and a few other radios. The most common interference
came on the radios operating 140-160 MHz. Of course, some of this may be
the radios' receivers, but there tends to be more interference from
radios running on closer frequencies. Besides that, cellular phones
strangely enough are very narrow-banded. I can get one to start
transmitting and not get any interference 100 kHz either side of the
actual transmitting frequency.

Don't overlook the point of view that a fixation on the
CW requirement may be contributing to putting the amateur
frequencies on the auction block. Some folks don't think
the discussion is "petty argument" - some folks think it is
energy spent saving the _service_ from the highest bidder.
Food for thought.

>Those of us who work as Radio Officers aboard ships laugh
>because you guys just don't get it. I see those who think
>that cw is hopelessly outdated, who think those of us who
>like using cw never use other advanced modes, all kinds of
>ridiculous and irrelevent arguments.

Those of use who work in professional data communications
laugh because you guys just don't get it ;-). Be careful
about suggesting that only the folks that want to remove or
replace the CW requirements are guilty of using ridiculous
or irrelevant arguments.

>You can't argue cw has saved lives. I can give you
>countless examples, and yes recent ones like the Achille
>Lauro sinking.

So what? You can't argue about phone saving lives. While it
is probably impossible to count the actual number of heads,
I'd speculate that voice communication has saved *far more*
lives that CW communication. Before you refute this, consider
that public service agencies almost exclusively use FM voice,
air traffic control uses AM voice, and cellular telephones
are FM voice. If "it saves lives" is a compelling argument
for requiring knowledge of a communication mode, then the mode
that should be required is voice.

...

>So quit the whining, it's giving the FCC and Congress the
>nails they are hammering into the ham radio coffin. You
>can't hear the pounding? Better quit whining then and
>listen and put your efforts into saving it before it gets
>buried by the highest bidder.

Oops, there's the whining word (sigh). When I hear the whining word, it makes be believe the speaker doesn't have a cerebral argument and must turn to a personally insulting tone. C'mon, you can do better - I hope.

Please note the Followup-To: line.

3701. Charging Gell-Cell Batteries; questions

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-19 00:00:00 UTC
From: mam@cbnews.cb.att.com
Message-ID: <4in2i1$e2d@nntpa.cb.att.com>
Source record: 229393

I've been following the 'How to charge my batteries' discussion, and I think I got it.

If I want to charge my Gel-cell 12 volters, I can connect them to 13.5 volts forever, and they will be fine, and always ready.

If I want them to charge faster, I need to raise the voltage to maybe 14.5v FOR A WHILE (a technical amount of time), and then stop charging them.

Questions: If I have a real small, plug it in the wall, 12v black bug type converter which was used for something else (like a calculator or radio), and it's rated at something small like 50mA, can I plug that in and leave it charging forever, or do I have to stop charging after a while?

What if I have one of those chargers for emergency lites like you see in the stairwells of corporate America, normally used for Lead-wall batteries. Can I use THAT on my Gell-cell, and what precautions.

Thanks,

Mark KB2els

HUH???? CW and the selling of HF frequencies??? what business in it's right or wrong mind would spend big $$$'s on radio spectrum that acts as finicky as Morris the cat and behaves as well as a 2 year old.

VHF/UHF maybe yes. In that case, CW or the morse code requirements aren't gonna matter one way or another.

Let's keep this in perspective. Those who want to eliminate the morse requirements are nothing
more than closet DX'ers. no more no less.

I can see it now...the olympic winter games video feed transmitted along 75 meters...what clarity..
what fidelity...NOT

>Tony Reeves
>AB6GA

The back-door method works best. Find someone who knows someone.
This may require good weaseling skills.

First, find out which agency (or business) ownes the site you want
to use.

Then start at your local ARC, and ask around for anyone who works
full-time in one of the following businesses:

Installing and servicing two-way radios
A broadcast radio or television engineer
A policeman or fireman
RF engineer for a cellular phone company

...and ask them if they know anyone who works for that agency,
especially in setting up and maintaining their radios.
Spread your search to other ARCs.

Stage two (advanced) weaseling goes a little farther:

Find out who holds the license for the closest repeater, and
ask him everything he knows about the local political situation.

Call your ARRL section manager and ask his advice.

Find out who the ranking ARES member in the area is, and ask
his advice.

Stage three (unabashed weaseling):

Make it a priority to find a ham in that agency who
is willing to start a club with you. That gives you an internal
footing, and you're not likely to be charged rent for the site.
Go with him to find out who is in charge at that site, and
talk up all the benfits of ham radio, specifically emergency
communications.

I recommend against knocking on the front door and asking for space
on site without an insider helping (sponsoring) you, since that's
an invitation to be charged ever-increasing rent.

Good luck. Maybe someone else can help.

3705. Rob Leiden, KF2PJ, Appointed New ENY SM

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-20 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BbEoVyN.sanderman@delphi.com>
Source record: 229147

ARRL Headquarters has confirmed the appointment of Rob Leiden, KF2PJ, of Glenville, New York, as the new Section Manager of Eastern New York. Rob will fill out the unexpired term of Paul Vydareny, WB2VUK, who was elevated to Hudson Division Director when Steve Mendelsohn, WA2DHF, was elected ARRL First Vice President back in January. Rob is employed by Lockheed-Martin and holds a degree in physics from Union College in Schenectady and an MBA from Rensselaer Polytechnic Institute in Troy. Currently a member of the Schenectady Amateur Radio Association Board of Directors, he is a former Chairman of the Schenectady Museum Amateur Radio Association.

Rob has retained the entire section staff. In addition, he is pleased to announce the appointment of Elmer Sharp, WA2YSM, of Poughkeepsie, as Technical Coordinator for Eastern New York. Elmer has vast technical experience in the radio field and will be quite an asset to the hams of the Section. Elmer has also served as an "elmer" getting others started in the amateur activity; most notably, his own son Doug Sharp, WB2KMY. Elmer stands ready to help local League members with technical issues and can be reached at 914/471-0946, at his callbook address, or on packet to WA2YSM @ WA2YSM.

Let's cut the crap. Learn the code. If you don't want to, you're probably too lazy. PERIOD. My own Dad says he "can't ". We were both licensed on the same day. So he's still No-Code-Tech and I have progressed to Extra. So what, right? Well, he has completely lost interest in the hobby, I believe, largely in part because he was only exposed to a small facet of the hobby, that being FM. The truth is he was too lazy to put in a couple of hours a day for a month or two learning the code enough to be able to pass 80% from a multiple choice test. I will have a hard time being convinced that ANY Hams"can't" learn the code, except for a few exceptions of course. Before I learned Morse Code, I never would have believed how much I would enjoy using it. Obsolete!? Get Real. Tune in to 40 meters any night between 7.000 and 7.050 Mhz and try to ignore the obsolescence. Or most any other band for that matter. Stop whining and start studying, you lazy hams. 73, Mike KK5EP.

3709. "C" in CW

From: zut@cais.com
Message-ID: <zut.21.0371E2A8@cais.com>
Source record: 229153
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

PARDON THE REPOST, BUT THIS IS IMPORTANT!!!
//
PLEASE READ ARRL BULLETIN #9 BELOW REGARDING THE ARRL's PETITION RM-8763!

ARRL Bulletin #9 describes the ARRL's having petitioned FCC to modify Part 97 of the Rules to change (quoting from RM-8763) "its policies and procedures governing preemption of state and local regulation of the siting and maintenance of antennas and antenna support structures for use of licensees in the Amateur Radio Service." This amendment, if adopted, will enhance PRB-1 and give us more ammunition to fight restrictive regulations and may allow Amateurs to preempt deed restrictions, covenents, CC&R's, or condominium regulations that now prohibits erecting Amateur Radio antennas.

Read the bulletin below and send your comments to the FCC NO LATER THAN MARCH 22, 1996. It is not necessary that you go into great detail why you support (or oppose) changing the Rules, but of course you may do so if you wish. However, it's probably best if you keep your comments brief, to the point, and polite.

Address your comments to:

Secretary
Federal Communications Commission
Washington, DC 20554

Start your letter with your comments with a header something like this:

In the Matter of

Modification and Clarification of
Policies and Procedures Governing
Siting and Maintenance of Amateur
Radio Antennas and Support RM-8763
Structures, and Amendment of
Section 97.15(e) of the Rules
Governing the Amateur Radio Service

To: The Commission

(Enter your comments with your name, callsign, and address.)

If you want each FCC Commissioner to get a copy, you should send eight (8) copies of your letter.

THE DEADLINE FOR COMMENTS IS FRIDAY, MARCH 22, 1996, SO PLEASE DO IT NOW!

73,

Tony Stalls, K4KYO

SB QST @ ARL $ARLB009
ARLB009 PRB-1 change sought

ZCZC AG88
QST de W1AW
ARRL Bulletin 9 ARLB009
From ARRL Headquarters
Newington CT February 15, 1996
To all radio amateurs

SB QST ARL ARLB009
ARLB009 PRB-1 change sought

The ARRL wants the FCC to take additional steps to compel state and local governments to make reasonable accommodation for Amateur Radio under PRB-1 and apply the least restrictive means to regulate amateur antennas and activity. In a Petition for Rulemaking filed February 7, the League calls on the FCC to amend Section 97.15(e) to say that any state or local ordinances restricting ham radio antennas to heights below 70 feet would be presumed unreasonable, unless the state or local authority could show its restrictions support a clearly defined health, safety or aesthetic objective. State and local governments also could not impose substantial application costs on amateur service licensees.

The League also wants the FCC to acknowledge that it has an interest in the effective performance of Amateur Radio stations in areas regulated by deed restrictions or restrictive covenants rather than by local zoning ordinances.

The League says clarifying the preemption policy (PRB-1) would help guide municipalities to enact provisions that make fair accommodation for amateurs and avoid highly divisive litigation between hams and localities.

Under the suggested changes, state and local governments could apply to the Commission for a full or partial waiver of the amended rules in unusual circumstances.

The FCC has not assigned a rulemaking petition (RM) number.

Here is the suggested wording of Section 97.15(e) the petition requests:

(1) State and local regulation of a station antenna structure must not preclude amateur service communications. Rather, it must reasonably accommodate such communications; it must constitute the minimum practicable regulation to accomplish the state or local authority's legitimate purpose; and it must not impose substantial costs on amateur service licensees.

(2) Any state or local antenna restriction or regulation which, on its face or as applied, would limit amateur station antennas to heights below 70 feet is presumed unreasonable unless the promulgating authority can demonstrate that such regulation is necessary to accomplish a clearly defined, and expressly stated health, safety or aesthetic objective; that there is no less burdensome alternative to the regulation; and that the Federal interest in efficient amateur radio communications from the amateur station at issue is otherwise reasonably accommodated.

(3) Any state or local authority, or other entity that wishes to maintain and enforce zoning, land use or other regulations or restrictions inconsistent with this section may apply to the Commission for a full or partial waiver of this section. Such waivers may be granted by the Commission in its sole discretion, upon a showing by the applicant that local concerns of a highly specialized or unusual nature create an overwhelming necessity for regulation inconsistent with this section. No application for waiver shall be considered unless it includes the particular regulation for which waiver is sought. Waivers granted according to this rule shall not apply to later-enacted or amended regulations by the local authority unless the Commission expressly orders otherwise.

KD> Woops.. get a clue yourself. The FCC does indeed have some jurisdiction ove
KD> the internet since alot of the traffic goes across common carrier lines.

The FCC should not lose focus that Internet audio is a different quality
and grade of service than the regular common carrier interstate long
distance telephone service.

It's about time that technology caught up with some of the assumptions
made in establishing telephone rates.

Consider the price of a transistor in 1960, vs. the price today.
Products using transistors have decreased in price significantly over
the years. Meanwhile, the price of telephone services, taken as a
whole, has gone up significantly.

Maybe such a petition will cause the FCC to look at some of the
assumptions made about telephone rates, and give the public the
opportunity to comment.

>frequency?" Why not use circuitry that tunes directly into the desired frequency? In
>other words, what's the image frequency used for and why?
>
>Many thanks,
>
>J. Guy Stalnaker

The image frequency is an unavoidable consequence of superhetrodyne
receiver design. In a good receiver, the front end filtering is sufficient
to prevent the image frequency from reaching the first mixer. In a cheap
radio, or a wide frequency coverage radio, the front end filtering may
not be good enough, so the image frequency mixes with the first LO and
the output appears in the IF where it is amplified and demodulated along
with the desired frequency.

There is a radio design that doesn't have images. It's called a TRF
design. TRF stands for Tuned Radio Frequency, and it is simply a
chain of RF amplifiers all gang tuned to the desired signal frequency.
But it has other, and worse, problems than image response, so it was
abandoned for the superhetrodyne design way back in the 1930s.

The three main problems of the TRF design are to get all those RF
amplifiers to track tune in sync as you tune from station to station,
dealing with the selectivity changes as you change frequencies, and
avoiding self-oscillation. The superhetrodyne design sidesteps these
problems by doing the gain and selectivity at a *fixed* IF (Intermediate
Frequency). This eliminates the variable gang tuning problem, and
eliminates the problem of selectivity changing with frequency. Since
it is a fixed frequency subsystem, self-oscillation problems are also
relatively easy to avoid.

The tradeoff for that is that you need a mixer to convert the desired
signal to the Intermediate Frequency by beating the desired signal with
a LO (Local Oscillator) that is tunable. Unavoidably, the mixer gives
you both sum and difference products, hence there is an image. As I
said, a good superhetrodyne receiver has sufficient filtering ahead
of the first mixer to prevent a signal at the image frequency from
entering the mixer, a cheaply built receiver often does not.

The most common FM IF frequency is 10.7 MHz. So the desired signal is tuned 10.7 MHz to one side of the LO, and the image appears 10.7 MHz to the *other* side of the LO. The product in one case is 10.7 MHz and in the other it is -10.7 MHz. The negative sign merely means the envelope of one of the signals is reversed from that of the other product. So it's like looking in a mirror, and it is thus called an *image*.

Since the desired signal is 10.7+10.7=21.4 MHz displaced from the image signal, you only need a filter before the mixer that will pass one of the signals but reject the other one 21.4 MHz away. This is usually an easy filter to design and build.

But for the TRF receiver, you need a *bunch* of *tunable* filters that are capable of rejecting a signal only 200 kHz away (the separation between FM broadcast channels) from the desired signal. That requires a Q (sharpness) that is very hard to obtain in a gang tuned design. So the TRF design fell out of favor many years ago. It is still sometimes used for VLF (Very Low Frequency) receivers because the needed Q is not so hard to obtain at the lower frequency.

looking for some hams to help me locate electronics catalogs from the mid 50's to mid 60's.

especially ALLIED ELECTRONICS, LAFAYETTE RADIO ELECTRONICS, and heathkit.

as a sidelite, i would also like to acquire a built or unbuilt 100mw "Knight Kit" CB walkie talkie (from Allied Electronics i think). It is from about 1959 or 1960, case is blue, 4-transistor.

any help?????

>disability waivers require that you pass a 5-wpm code test. The FCC
>can waive their own 13 and 20-wpm requirements, they can't waive the
>ITU's.

Except that the ITU doesn't have a speed requirement. The requirement
says,

Any person seeking a license to operate the apparatus of an
amateur station shall prove that he is able to send correctly
by hand and to receive correctly by ear texts in Morse code
signals. The administrations concerned may, however, waive
this requirement in the case of stations making use exclusively
of frequencies above 30 Mhz.

That's it, the complete text relating to Morse code testing for amateurs
in the ITU treaty. No mention is made of speed at all. An administration
could choose to test the applicant at 5 WPM, or at 5 characters per fortnight
as far as the ITU is concerned. All the ITU wants is a demonstration of the
ability to send by hand (which the FCC doesn't require), and receive by ear
(which the FCC will waive) texts in Morse code signals.

So to be precise, *no one* who has taken a test under the VE system
has a valid amateur license to operate HF since there has been no
"send by hand" demonstration by the applicant. And no deaf person
has a valid license allowing HF operation since they have not demonstrated
the ability to "receive by ear" texts in Morse code signals. And no one
who has taken a test adminstered by an ARRL VE for any license class
except Extra has even taken a test in Morse code signals since the
ARRL VEs use Farnsworth timing, and thus aren't using the Morse code
as defined by the ITU, which specifies the element timings that
constitute the Morse code, including letter and word spacing.

So all you illegal bootleggers get off HF.

>
>A real, meaty technical test would find this small percentage. No CW
>required.

I'm not sure that's true. Technical "book" knowledge is no guarrantee
of the sort of imagination and creativity it takes for innovation. As
noted in the April QST lead editorial, amateur radio offers a learning
laboratory where such traits can be allowed to be expressed, and where
the necessary technical expertise can be gained in a hands-on manner.
It's not true that everything I ever needed to know I learned in
kindergarden, nor is it true that everything I needed to know about
amateur radio I learned for a test *before* becoming an amateur. (And
no set of finite exams can ever measure it either.)

We need an exam, to insure as much as possible that the applicant
knows enough not to be a hazard, and to remove the excuse "I didn't
know" from rules violators, but we don't need a Phd level test in
order to allow access to a learning laboratory where we hope over a
lifetime to *gain* Phd expertise.

Now we can debate about whether current exams are a sufficient entry
test, and I would agree that they probably are not. What we have to
guard against is going overboard in this direction so that amateur
radio only lets in people who are *already* experts in the field.
Amateur radio is supposed to be a self-training service, so by
definition it *must* let in people who need to *learn*, and is not
benefitted by allowing access only by those who already know it all.

>The current level of technical expertised found in the amateur tests is
>very low, IMO. Something between the Advanced class test and the old 1st
>'Phone test would be what I have in mind.

I'd rather have a test which shows that the applicant has the skills
to *find out* what he needs to know, rather than just demonstrating
a book knowledge of a subset of what he'll need to know. In that regard,
I've advocated a form of "open book" exam similar to some professional
exams (such as the state electrical and plumbing contractor type exams).

This type of exam could be structured to allow the applicant to demonstrate
that he knows how to access and interpret information as the need arises.
This is the type of lifetime skill he'll need in amateur radio.

But more to my point, I don't think *any* test, except actual post hoc
experience, can determine whether an amateur *wants* to increase his
skills and knowledge, and wants to *apply* that knowledge in his day
to day activities. So I see testing holding a very limited role in
serving the goals we'd like to set for amateur radio.

>>The best we can do is find out who has the creativity and
>>imagination to explore post hoc. What we don't want to do is turn off
>>potential members of the group via irrelevant hazing or by fostering

>Tuning across 2M, 20M or 75M phone these past few years can't help but
>foster the impression in the newcomers' minds that the amateur service is
>nothing but upscale CB. What is being done to clean this up? Nothing.

Indeed. This is a problem. But I don't think it is a problem that can
be addressed by an exam system. This problem is primarily *social*,
and must be addressed by social means. Peer pressure and setting a
good example are our primary social tools, with government enforcement
a last resort reserved for the most extreme cases.

>>But how are we marketing the code test free license? We call it derogatorily
>>"no-code" and treat it as a beginner's license suitable for wives and girl

>>and engineers know beeping is a backward obsolete method of communicating.
>
>Huh? Huh? You're now trying to peddle amateur licenses with psycho-babble
>and "empowerment"? I don't get it.

It's called *marketing*. It's the way giant enterprises get to be giant
enterprises, whether they are private or *public*. The world runs on
perception and expectations. The primary way we affect the world is
through altering those things, and the primary tool we use to do that
is marketing.

>>There are a few engineers who are hams, and who beep furiously, but
>>when you pin them down, they say that they do it to get away from
>>the complexities that they face in their jobs. In other words, it
>>serves as mind pablum, like watching TV. That's not the sort of

>>found primarily among the beepers.
>
>That sort of person isn't interested in ham radio anymore, period.
>The Internet, computers and other widgetry seem to have soaked up most of
>those people and their expertise.

Yes, and why is that? I think that a major reason that is so is because
of the way amateur radio has been *marketed* in comparison to computers,
the internet, and the like. The *perception* of amateur radio in the
minds of potential entrants is of an anachronistic activity. Rather than
seeming to hold out unlimited promise, it holds out a sense of historical
re-enactment, restriction, and exclusion. To a large extent, we've done
this to ourselves by clinging blindly to old ideas and old ways, *and*
by insisting newcomers do likewise. We've failed to sell the adventure
and excitement of discovery and technical exploration that is so apparent
with computers and other new technologies. Yet radio has this same
potential in the realm of RF, but we tend to hide it under a bushel.
In fact, many amateurs seem to think that amateur radio has already
passed its zenith, and are fighting a rearguard action to try to keep
it as it unchanged for evermore. That's a death sentence, a static
organism is a dying organism.

>Further, the FCC stands in the way of any real experimentation with really
>new technologies in the upper bands. Let's say that I want to test a nifty
>new digital modulation. Can't do it until I chase down the FCC (which seems
>to be requiring that their employees be three-toed sloths to apply for
>work) and get a variance to allow the transmission mode. Wheeee... that
>sounds like fun.

While I agree that the FCC rules are often overly restrictive with regard
to new techniques, I must point out that obtaining a STA isn't *that* hard,
and that the FCC *does* have an interest in promoting orderly use of the
spectrum. The subband and emission regulations do, IMHO, have too much
emphasis on preserving the status quo, and not enough on promoting
experimentation with newer (and perhaps better) techniques. That seems
counter to the amateur charter.

>Spread spectrum has been how long, and still it isn't out of the barn as a
>generally-usable modulation mode?

Yeah, I know. This has been a black eye all around. The forces of the
status quo have been hard at work trying to limit this activity, the
experimenters haven't pushed as hard as they could have, and the government
has maintained a chicken and egg problem with its regulations.

>
>>If I had my way, the code test free class would be Extra, the group

>of "goodness" in a ham ticket. Your proposal shows that you don't think of
>the CW requirement as being truely useless; you're merely interested in the
>perceptions the CW tests might foster, and not in whether or not it is the
>gating issue to getting the high-freq. bands in use, and thereby preserved.

No, my suggestion is merely pragmatic. I do indeed think that the Morse
speed tests serve no valid purpose today, and would advocate that they
be elminated entirely as either irrelevant or redundant depending on the
application. However, pragmatically, the social consensus isn't ready for
that step yet. I would also ultimately like to see only *one* good exam
and one Class of license rather than the divisive mess we have now, but
that's not pragmatically possible at this time either.

>As I've said: the elimination of the CW requirements hasn't filled up the
>VHF/UHF/SHF bands and the requirement for same hasn't kept the lids off the
>HF bands. I'm apt to agree with you that CW is irrelevant to the goals of
>the licensing procedure(s).

Indeed, and the effort directed toward satisfying the requirement could
be better directed toward fullfilling other goals.

>So let's say we eliminate it completely. Will the upper bands fill up?
>I'm betting against it.

Yes, you're right, eliminating the requirement in isolation will do
little to fill the upper spectrum. It is only one piece of a complex
web of changes we need to make to achieve that goal. I believe it is
a necessary piece of that web of changes, however, because it would
alter the perception of the amateur service from one of anachronism.
To do any good, though, we still have to do other things that will
enhance the perception of the service as forward looking, progressive,
and exciting. In short, we have to *sell* the idea that there are
things worth doing in amateur radio, including on the upper spectrum
if we hope to populate it.

3720. World Class Foxhunt coming to California

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-20 00:00:00 UTC
From: homingin@aol.com
Message-ID: <4iq4it$49h@newsbf02.news.aol.com>
Source record: 229247

WORLD CLASS FOXHUNT COMING TO CALIFORNIA IN MAY

Plan now to attend southern California's second international-style foxhunt! The 1996 West Coast VHF/UHF Conference in La Mirada, California will include an all-on-foot foxtailing contest with cash and trophies as prizes.

This hunt will be the last event of the Conference, beginning early Sunday afternoon (May 5) at an outdoor venue not far from the hotel. It will be open to anyone of any age who has registered at the Conference. Families are welcome, but all entrants must compete independently (no assistance allowed) and each entrant must bring his or her own RDF equipment. All transmitters will be on two-meter FM. There will be separate divisions for various age groups, with prizes for winners in each division. This even is being organized by the Southern California Six Meter Club, the same club that brought you Hamcon/Foxhunt-95 last September.

"Foxhunting" or "foxtailing" for hidden radio transmitters is a very popular radiosport around the world, but it's done differently from American mobile "T-hunts." In a T-hunt, hams drive to the "T" in their cars, with perhaps a short on-foot search (called a "sniff") at the end. On the other hand, international-style foxhunts are done in big wooded parks. Five or more foxes transmit in sequence for a minute each. Total course length is from 4 to 7 kilometers. The first hunter to locate all foxes, marking his/her competitor card with the special punch at each fox, wins. Kids in many European and Asian countries do fox-tailing as part of their Phys-Ed programs in school. The World Foxhunting Championship takes place in Europe or Asia every 3 years.

You probably have almost all the equipment you need right now. In separate messages I will review details of international-style foxhunting rules and equipment recommendations. Also see "Foxhunting's Wide World" in the December 1995 issue and "More about Hamcon/Foxhunt-95" in the January 1996 issue of 73 Amateur Radio Today magazine.

Get your on-foot T-hunting gear ready. Have some practice hunts in your back yard. Register now for the VHF Conference and plan to arrive at the site early. There will be a forum session at 9 AM Saturday on the latest in both mobile T-hunting and international-rules foxhunting. Register for Sunday's Grand Foxhunt after the forum. Then practice your fox-tailing skills by finding the two-meter mini-T's and micro-T's that will be scattered around the convention site. Handicapped competitors please contact K0OV immediately so special arrangements can be made for you.

The 1996 West Coast VHF/UHF Conference will be at Gateway Plaza Holiday Inn, 14299 Firestone Boulevard, La Mirada, CA. Conference registration is

$15 per person. The optional Saturday night banquet, Sunday morning breakfast, and Proceedings book are available for additional charges. To register, send check to Southern California Six Meter Club, PO Box 10441, Fullerton, CA 92635. E-mail conference inquiries to rhasting@ix.netcom.com. Call (714) 739-8500 for hotel reservations. Send foxhunt inquiries to K0OV at addresses below. See you at the conference!

>Not true at all. Not only is code important, but it is obligatory to
>operate on HF bands worldwide.

When the only convincing argument for doing something is "because it's
the rules", it is then time to change the rules.

> It is not only used for Hand keys, but
>for beacons, and other identifying devices in the navigational spectrum.

>As well as for wx and other broadcasts, still more important than
>talking to Grandma.

What does any of this have to do with AMATEUR radio?

>If you want to be a serious radio operator, you should learn Morse Code,

>and not because you can use HF phone bands. You need the code,
>and any amateur worth his salt already knows that anyway.

Need it for WHAT? How is Morse knowledge a neccessity, other than
"because it's the rules" (see above)

> Incidentally, most amateurs have priviledges because one day they hope
>to turn Pro, or already are, and want to experiment.

Huh? How exactly does an AMATEUR radio operator "turn Pro?"

>Code is as instrumental in radio as knowing how to call cq

That was true in 1896, but this is 1996. Believe it or not,
communications technology has advanced a bit in the last 100 years. Get
with the times, or be left behind to gather dust!

>and if you don't want to learn it, stay off of HF, and get a phone.

And just who appointed you master and guardian of the bands? Fortunately,
your kind are a dying breed, the ranks of which grow smaller every day.

3723. New Awards

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-20 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <4io3v3$k17@firebrick.mindspring.com>
Source record: 229250

BUT I am in the process of creating some NEW VHF/UHF Awards
especially for Techs (and others).

Techs and Tech +s will be in separate Award Class from all other hams.

Modes will include Packet, ATV, FM, SSB, CW, and Mixed Modes.

Fixed, Portable and Mixed Locations,

All bands over 50mhz.

There will be Quarterly and Annual Awards by National Level, Region
(0-9), and State levels.

Awards will be for: States worked, Counties worked, Grids worked,
Countries worked, and Satelittes worked.

May be more if I think of them.

ATV and FM QSOs can be thru repeaters.

Packet can be any way you want.

Each QSO will count 1 point (I think at this time).

There will be low and high power divisions too.

EVERYONE who participates and enters WILL receive a Certificate of
Participation.
The top 5 or 10 in each award category will receive a certificate too.

What do you think about this idea?

Kevin,
In the mid-1950's I salvaged, reassembled, and erected an old heavily galvanized windmill tower as a beam support, also using it to support one end of a long folded dipole. I set the legs in a couple of cubic feet of concrete, each - and it was solid through years of winter and spring zephyrs of up to 60 mph.

Put in some support plates, and a big ball bearing (from a piece of farm machinery) and installed the rotator within the tower itself, driving the antenna through a long shaft.

Bottom line: it worked fine, but I could really have used something taller to get the beam above some nearby obstacles.

Your problem, if you're not in a rural area, might be zoning codes.

Ken (ex-W7HVP)

That depends on the class, IMHO. If you're just going to be taught the stuff that's in the RSGB book (or equivalent), then you'll miss nothing from a correspondence course - a lot of amateurs, including myself, are self-taught. But a good class will at least let you listen to the amateur bands a bit, and will explain the good and bad practices you hear there. That you will probably miss out on.

If you can find some local amateurs, then you may find they're willing to let you listen to the amateur bands, and to chat to you about it. That is well worth doing if at all possible.

>Also does the class A and B test involve any practical work. I've been
>told hat you have to strip down and rebuild a radio. I know you have to

AFAIK there's no practical in the Radio Amateur Exam in the UK. There is (I think) in the novice test, but not for the full thing. IMHO this is wrong....

>I can get to grips with the protocols of using a radio fairly quickly -
>it's just the old image that you have to be a scientist to pass the test
>that is disturbing me.

Uh-Oh... This is where I disagree with you. A radio amateur, at least in the UK, should be an experimenter. That doesn't (necessarily) mean electronics experiments - it doesn't mean that you have to have homebrewed everything, but IMHO, amateur radio should not be seen as an alternative to CB.

So, if by 'scientist' you mean somebody with a formal scientific education, I agree with you 100%. But I would argue that all radio amateurs should be scientists in the sense of doing experiments (of all types) involving radio communication.

Also, a radio amateur (again, at least in the UK) is allowed to make his own transmitters, and is thus legally held responsible for his own

transmissions, both in content (not obscene or objectionable, not in secret code or cipher, etc), and technically (no unwanted harmonics or subharmonics, in band, allowed modes, no interference, etc). You thus have to have _some_ technical knowledge to ensure the latter.

Will the gentleman who responded to me via email about windmill towers please send the mail again? -- it was accidentally deleted.

I went to a commercial tower company and asked their opinion of windmill towers. They weren't interested in setting one up even if I paid them their regular hourly rate. They said the old bolts are very difficult to remove due to corrosion.

FWIW and IMHO (don't you just love these abbreviations!) this is absolutely essential. Although I'm certain it happens, how on earth can someone attend an evening course, pass an exam and then be let loose on the bands without ever even listening to a radio, handling a component or piece of wire.

Myself and many people I know spent years SWL'ing using homebrew receivers, modified ex-govt gear etc before we got round to taking the RAE.

Before anyone jumps up and down complaining about me going on about the good old days, surely this is by far the best way to learn about good and bad practices, propagation in real life, how to string bits of wire together to make an antenna that works (sort of), what components do what and how....etc etc.

To sit in a class and have someone out front twiddle a few knobs and tune in a few QSO's is not going to set a prosective "ham" up for anything except waffle on 2m with a handie and a rubber-duck.

Some decent hands-on experience is what's needed (and as far as I can tell is what the Novice license tries to achieve, to its credit).

So to any prospective "hams", go and build a cheapo HF receiver (plenty of kits available) or get a cheapo commercial HF receiver. Forget buying G5RV's, long wires or these ridiculously priced commercial dipoles. Sling out a length of wire and listen, listen listen...and then listen some more. Read some magazines (Rad Com, PW, HRT etc), buy a few cheap books and try and contact a few local amateurs to show you some of the ropes.

And listen some more.

That way you will learn what goes on on the bands, how to use a receiver, make an antenna and then you can consider the RAE. After that, when you get on the bands you won't sound a total wally and, I'm sure, you will enjoy yourself much more.

I am 99% certain that some years ago (not sure if it is still current) that to obtain a license in the old USSR you had to have proof of a long-ish period and experience of SWL'ing
and possibly show this through membership of a radio club. Not a bad idea. There were some excellent HF (mostly CW) ops from the USSR in their 'teens operating club stations and all their operating was learned by watching, listening and listening some more!

Exercise those ears!

Ok, here's the questions?

I've got some literature from the RSGB about HAM radio and it's about one or two years out of date. What I'd like to know is does a correspondance course lack anything that I might absorb if I went to a proper HAM class in the evening. My time is limited and I can't genuinely say that I could attend a class every evening for eleven weeks.

Also does the class A and B test involve any practical work. I've been told hat you have to strip down and rebuild a radio. I know you have to get some electrical parts.

I can get to grips with the protocols of using a radio fairly quickly - it's just the old image that you have to be a scientist to pass the test that is disturbing me.

From calling the number myself (since I heard it was O.O.S.) and listening
to the OOS announcement, it sounds like a paging terminal. Probably a
personal 800 number from Skytel or other carrier. Perhaps the poster
discovered it was not a wise move to publish his pager number here after
he got flooded with calls (like the one I just made) and changed it.

To narrow your search. Look for Title 47 of the CFRs (Telecommunication).
Then in 47 CFR look under parts 2 and 15.

Just looking for part 15 of the all of the CFRs will drive you nuts...
there are a lot of part 15s.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 MARCH AND FORECAST FOR 21 MARCH - 23 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 19 Mar
Daily Proton Fluence >1 MeV: 3.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.2E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Mar 22 Mar 23 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Mar: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active, with a minor storm
period 12-15UT.

Estimated Indices : A K Observed A Index 19 Mar
Learmonth 21 3224 5443
Fredericksburg 13 12
Planetary 13 12

Observed Kp for 19 Mar: 1333 3223

2B. MAGNETIC FORECAST
Date Ap Conditions
21 Mar 12 Unsettled to active
22 Mar 10 Quiet to unsettled
23 Mar 10 Quiet to unsettled

COMMENT: IPS Geomagnetic Disrurbance Warning 5 was issued on 20 March
and is current for interval 21 March.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
20 Mar Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
21 Mar Fair Fair Poor-fair
22 Mar Normal Normal-fair Fair
23 Mar Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
20 Mar 0

Observed Australian Regional MUFs:
Darwin: near predicted monthly values, with 15-30% depressed
04-09UT.
Townsville: near predicted monthly values, with 15-30%
depressed 05-08UT and 23UT.
Sydney: near predicted monthly values, with 15-30% depressed 21-23UT.
Hobart: 15% depressed until 09UT and then near predicted monthly
values.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
21 Mar -15 about 15% below predicted monthly values
22 Mar -5 near predicted monthly values
23 Mar 0 near predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 20 March
and is current for interval 21-22 March.

Sounds like a Hallicrafters S-38. If you want to restore it as a classic radio, fine. In pristine condition, a radio like that might be worth $80 - $100. But if you want to actaully use it, get a new radio. Any modern radio, even a very inexpensive one, will outperform it even you restore it to like-new working condition. You'll spend more in parts and frustration trying to get a wrecked old H'crafter working than you'll spend on a new radio. Best of luck.

Mike, N4PDY

>extras think about code.

There's no such thing as a "disability waiver no-code extra." Even
disability waivers require that you pass a 5-wpm code test. The FCC
can waive their own 13 and 20-wpm requirements, they can't waive the
ITU's.

>someone attend an evening course, pass an exam and then be let loose on
>the bands without ever even listening to a radio, handling a component
>or piece of wire.

Feel free to flame me, but when I took (and passed) the RAE, I had never seriously listened to the amateur bands. However, I didn't then immediately rush out and buy an HT and annoy everyone with poor operating practices - in fact the main reason that I've never operated much is that I don't have this practical experience - and I'm slowly obtaining it.

As to handling components and wire, well, I've been doing that for more years than I care to remember, and don't intend to stop anytime soon.

[...]

>Before anyone jumps up and down complaining about me going on about the
>good old days, surely this is by far the best way to learn about good and bad
>practices, propagation in real life, how to string bits of wire together
>to make an antenna that works (sort of), what components do what and
>how....etc etc.

I agree 100%. Amateur radio shouldn't be about buying a rig and an antenna, pluging them together and talking. It should be about experimentation, trying things out, homebrewing, etc.

I'd love to see it be made illegal to sell ready-built transceivers for amateur bands (ex PMR conversions would still be OK, I guess). How using an HT is 'self training in wireless telegraphy' I can't think.

[...]

>Some decent hands-on experience is what's needed (and as far as I can
>tell is what the Novice license tries to achieve, to its credit).

Yes, and I wish there'd been a practical element in the RAE when I'd taken it. It would probably have made me a lot more active now.

>So to any prospective "hams", go and build a cheapo HF receiver (plenty
>of kits available) or get a cheapo commercial HF receiver. Forget buying

Or, if you like ancient electronics, do what I did and (litterally) pull an AR88 out of the skip and restore it....

But don't assume that all the practices you hear on amateur bands are good ones. I built that little 2m Ramsey kit receiver from Maplin, and some of the practices on the SW London repeater (I'm not sure which one) were pretty awful. A lot were fine, though, but do watch out for this.

As an aside, I'd not recomend that Ramsey kit to a beginner. There were several components missing (not an uncommon problem I am told), and aligning it is non-trivial unless you have a 'scope or counter good to at least 200MHz. As I've been an electronics hobbyist for a long time, I had such an instrument.

[...]

>That way you will learn what goes on on the bands, how to use a

Who knows... Maybe when I finally get the AR88 working again, I'll discover that I really do want to operate on HF after all, and then I'll take the Morse Test at last...

[...]

>I am 99% certain that some years ago (not sure if it is still current)
>that to obtain a license in the old USSR you had to have proof of
>a long-ish period and experience of SWL'ing

That sounds like an _excellent_ idea - but why wasn't there also an electronics practical test as well. There should be IMHO.

From: ed@fore.com
Message-ID: <4ipkaq$3iq@baleen.fore.com>
Source record: 229288

Tuesday evening, a quite impressive band opening occured on the 10m band.
I was scanning around and listening to lots of hams in the mid west from my
QTH of pittsburgh pa. Several QSOs mentioned a 10-10 number after their
call sign, or "You could work enough stations to get your 10-10 number tonight".

Im am currently a no code so I could not get on the air and ask them what the
10-10 was.

What is it?

3762. US License Examination Opportunities Scheduled 3/20/96 to 7/08/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-20 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <3150686A.4CA7@arrl.org>
Source record: 229289

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/doc/hamualr/callsign.html

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special

application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC
vanity call sign information fact sheet PR 5000, number 206v)
by writing ARRL, 225 Main Street, Newington, CT 06111.
You must include an SASE.

Form 610V also is available from the FCC via the internet at

http://www.fcc.gov/Forms/Form610V

or

ftp://ftp.fcc.gov/pub/Forms/Form610V/

The FCC Forms Distribution Center will accept FCC forms requests
by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else
bring two non-photo forms of ID); bring your original FCC license
and a photocopy of your license (if you are currently licensed);
bring the original and a copy of any Certificate(s) of Successful
Completion of Examination (CSCEs); if necessary, bring a scientific
calculator (that does not have the ability to store formulas); bring
a pen and two pencils; and be sure to bring payment for the test fee
if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license, a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class license.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 860-594-0300 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "vec@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to

always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068-0011; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1996 test fee is $6.00.

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1996 test fee is $6.05.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1996 test fee is $6.05.

What DOES this mean?
Exactly how did it do that?

Ken Nishimura wrote:
>OK, here's a clip from the NYT -- of particular interest
>is the last paragraph -- Steve Mendelsohn is VP of ARRL.

>I, of course, am staying out of this fight :-)

The history of this issue, including QST's January 1996 editorial, indicates ARRL would be bolstering their "top management" levels in order to promote the easing of requirements for Morse Code, through what I believe will be a national tour or campaign by ARRL officials to gather "overwhelming" support for their agenda.

That's fair enough. But it should ALSO be well noted that then-Director Mendelsohn stated at Ham Expo in Long Island, New York on 10 November 1990:

"There's no need for amateur radio to remain a technical hobby, simply because technicians and engineers can't even find jobs today. You know, my father was a plumber, and he advised me to do the same. And looking back on it, you know, he was absolutely right." Barry Goldwater echoed the same feeling about 18 months ago on a western radio station. To paraphrase: "I don't think it should be necessary for an amateur to master even the fundamentals of radio law to hold a license."

Is ARRL going to push for an easing of Morse Code requirements? You bet it is! And it appears clear to me they will also support an easing of theory requirements as well. Amateur radio has fooled with this problem for too long a time. Now it finds itself in deep trouble. Small wonder.

Make one. You can look in the February 1993 QST, page 37.
Here you will find a VERY simple one to build for less than
$10 parts only.

Todd Jonz (todd@tj.org) wrote:
: I'm in the market for a pair rig-to-PC interfaces (TTL to RS-232 level
: converters), one for a Yaesu FT-736R and another for a Kenwood TS-950SD. I
: called the local HRO store to inquire about prices and availability and was
: absolutely astonished to learn that they want $110 and $120, respectively,
: for these little beasts. I assume that this is in the ballpark of the MSRP,
: and that the other major suppliers will have similar prices.

: I recall seeing ads in the past in QST for several third parties offering
: these interfaces in the $40 to $50 price range, but after pouring through
: the last three issues, I've come up dry. Can anybody give me a pointer?

: KB6JXT, Todd

: P.S. Please excuse what may be a stupid hardware question from an admitted
: software geek, but us there any possible justification for a $120
: price tag on an item like this? Seems *way* out of line to me....

3768. Car`s and EMC.

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-20 00:00:00 UTC
From: robin@zso.dec.com
Message-ID: <4ipveh$ro8@usenet.pa.dec.com>
Source record: 229295

Hi,

I have just moved to the Puget Sound Area from GM`land and
need to buy a car. I like to run HF & VHF mobile and so EMC
will play a part in my decision making process.

I seem to recall an article in QST about a year ago, going into
this in a reasonable amount of detail.

o Does anyone know if there is a FAQ for this subject i.e.
good and bad manufacturers?

I`m not sure which way I am going to go but it will be either a SUV
eg. Blazer, Explorer, Cherokee or a Sedan, like Accord or Camry
does anyone have any recommendations or comments on these
popular models.

Any pointers or advice would be gratefully received.

73`s

What do you mean, "lost". Do you mean, "no one there gives a damn about HF"?

>There is no doubt that you can't make anyone upgrade due to the fact that
>you have to have the desire and willingness to put the time into upgrading.

Meaning, learning Morse Code, of course.

>It is one of the things in life that you have to earn and it is not given to
>you. But the benefits are far greater than the time required to upgrade.

Like being a VE? HF access? Would you believe that not everyone is
interested in those things?

>Can anyone share with us what they have done to motivate hams to upgrade?

Lead by example, I suppose.

Please respect the Followup-to: line.

> >are mostly gone.
> >This sounds like one of the many S-38 variants to me.

The real issue here, however, is the conditipon of the "rubber
bushings"...these are insolatore that keep the cabinet isolated from the
chassis which is HOT! This is an AC-DC set, having one side of the AC
line connected DIRECTLY to the chassis. If your plug or receptacle is
wired incorrectly, and you happen to touch the cabinet and a good ground
at the same time, you'll probably understand what toast feels like!
Forgive the shouting, but DO NOT OPERATE THIS SET WITHOUT AN ISOLATION
TRANSFORMER. At the least, replace the isolation bushings with rubber or
plastic to maintain the insolation. Really.

: jon, I am working diligently to pass my code, having just completed my
: novice and technician testing....its tough and something that i have been
: putting off for 19 years due to the code..I already have an FCC commercial
: license now grandfathered into NABER but come on man....part of the reason
: that HAM radio is dying is because of the code..not just because of those

This is not true. Amateur radio population is going up.

: that are whining about it....I will give you that CW does work undeniably
: but for example when I went and took my code there were three VEC testers
: and two guys taking the tests...thats all....for three guys to give up
: their saturday morning just to get 2 new guys into HAM radio..Heck they
: seemed delighted to see people taking the tests...

Maybe I should cancel the VE tests I give if there are less test
applicants than VE's present. That would go over good. Did it ever
occur to you that these guys are volunteering their Saturday mornings to
help the overall Amateur Radio Community? You are really missing the
point here, buddy!

.look thru the hamcall
: lists there are tons of folks out there with no more than the tech calls
: and compared to 20 years ago when I started listening to the 80-40-20
: bands the airways are clean Know why?? there are few new hams...wonder why?

The bands are quiet for the most part due to the lack of sunspot
activity. Give a listen during a contest sometime, or perhaps during
Field Day. Ever listen to the lower part of 80, 40, 20? There is quite
a bit of DX activity going on there. When propagation permits it, there
is always a lot of activity! You want to hear dead, listen to the 2 meter
SSB and CW segments! (you mean 2 meters is more than FM?!! :-)

There was a construction article in QST about a year and a half ago describing this very thing. I can't remembr the exact issue with certainty, but I think it was September, 1994. I have made 3 of them, and they are quite handy. I have one hanging out of my office window, and one that I keep rooled up in my backpack to take hiking. They are quite useful, and very inexpensive to make.

I hope this helps.

Hello from HQ! Unfortunately, you are out of luck, unless you encounter a really rare tropospheric duct. At 200 watts output, W1AW covers most of CT on 147.555, but that's about the limit of it.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

I see the smiley, but this isn't funny. The value of amateur radio
VHF/UHF communications in an emergency is considerable, and suggesting
that anyone that doesn't want to learn code should bugger off makes
no sense at all. Even worse, it may be unintentional, but this suggestion
seems to make an entire class of amateurs unwelcome.

This guy IS a rocket Scientist AND he's on the government payroll!!!

cRiTTa66 <critta66@shadow.net> scribed:

xxok, heres the story,
xxA friend and i built the "FM-25" yesterday. We turned it on and
xxnothing.. So we looked at the troubleshooting guide, "check all the
xxcapacatators for correct poplaraty" so well what do you know i
fucked up
xxon C4. So i re did c4 which is a 10uF ec. tried it again, it worked!

xxAfter a little while of use (1 hour) is just stoped. no nothing,
just
xxstatic. I was prety MAD. So i took a lot at the PCB, it looked fine,
no
xxbridges or anything. My friend lookd at it and held it in her hand..
It
xxsuddnelt worked again. After this i set it up again to play some
music
xxfrom my walkman while listinging from my stero system in my room.
after
xxthe fm-25 stoped working again is was ovious something is really
fucked
xxup with it.. but it was geting late and she had to go home. So today
i
xxwas resoddering all the parts to see if i could fix the problem...
xxIt works again. Ok this is good, then it fucked up again! Dam i was
xxpissed. so i started touching the underside of the PCB, where all
the
xxsoddering connections are. it still wasnet working. Even though the
xxlight for "freqency LOCK" was on the transmiter wan't working.
before
xxthe led would just be off.

xxi also have this problem geting stero on the fm-25 before the unit
xxcompletly broke. any ideas?

xxWell im having trouble , should i send it in to be repaired for $36?
xxOr just send in the BA1404 and the program IC's to see if there
fucked
xxup? i dono. well if you have any suggestions please e-mail me at
xxcritta66@shadow.net.

xxThanx in advance

Hi Edward. I'm afraid that whenever you post to this news group you have to be prepared for someone to pick holes in just about anything you write and the whole thing will end up way off topic. The best policy is to ignore the idiots and be selective as to what you read.

I'm sure the guy who responded above knew exactly what you meant but had nothing better to do than pick holes in, MAYBE, a slight grammatical double meaning.

Thanks for your follow-up to my response to your original post. I was NOT flaming you but accept it may have appeared that way. I mearly wanted to point out that a good many people do obtain licenses without ever handling a component and only having spent 5 minutes listening. It

sounds like you have a good "apprenticeship" behind you and I wish you well. Yes, get that HF RX going, take a listen to the bands and with your background I'm sure you will do very well and have fun.

BTW, in this month's Rad Com, there is mention of a correspondence course - 24 lessons - for the RAE. The name / address for more info is:

Peter Pennington, G4ECQ,
6 Highland Close,
Folkstone,
Kent,
CT20 3SA.

If you want a copy of books available from the RSGB, let me have you snail mail address and I will post you some info.

Good luck!

73, Peter G4BVH

All you need to do to decode an AM signal is rectify it. Any transistor
junction can act as a diode junction under the right circumstances. I know
someone who gets nearby CB signals on his CD player -- no RF circuits at all,
it's being picked up in the audio amp.

I spend 3 days trying to reach their tech support human, I needed an RMA# for
a defective hard disk that would be out of warranty in 3 days... I must have
called 50 times to hear a busy signal, finally it started ringing, rang for
12 minutes, SOMEBODY PICKED IT UP AND IMMEDIATELY HUNG UP!!! I went berzerk!

I emailed every permutation of reveal.com, I was intentionally trying to spam
their email and ANGER some people as to how HOW BAD THEIR RMA SYSTEM IS!
and finally ended up with a name:
Oscar_orta@reveal.com You can also email Postmaster@reveal.com if you dont
get any response.

Good luck. I FINALLY got my rma#, mailed my failed hard disk back, 25 days
later I recieved a replacement drive, WHICH WAS USED!!! AND ONLY WORKED 1
WEEK AND IT TOO DIED!

I went out and bought a Western Digital from a local computer dealer/servicer.
I have worked in the computer industry for 8 years, and never replaced a bad
Western Digital hard disk! I have pulled so many seagates and conners that
I could have used them as bricks and built a dog house!

I heard that the swap-meet spaces are sold out. However, I also
heard that you might be able to pick up a space by asking for
one in the right newsgroup. Maybe this one.

There must be scalpers out there someplace.

Also, don't overlook asking around your local club to see who's
got a space, and nuzzling up to them and offering to split costs.
Maybe someone in this newsgroup would offer. If you grovel enough
someone might offer. Good luck. :)

Gary,

pardon me if I missed this, but what "codes and modulation" techniques
cheaply provide 13 db of gain over cw?

I also fail to understand why you feel QRP is more "stressful"...either
you work somebody, or you don't, just as if you were running 100 watts, or
a KW. Actually, if there is any "stress" involved, I would think it would
be on the other end of the QSO, the person who is trying to copy the weak
station. If I'm running 100 watts and someone running 200 mw answers my
CQ, I'm the one working hard to copy them through the noise. The QRP op
probably has armchair copy.

: > >airline frequencies, your radio's less than discriminating tuner
: > >picks it up.There is a small, minor detail: Air transmissions were AM, last time I
: checked! How does an FM receiver with poor-selectivity receive AM
: transmissions???

It could be due to a number of factors. I ccan think of one off-hand.
The LO is being pulled by the strong signal from the airplane. When the
LO is FMed, then it appears as audio.

Ferexample. The FM station is at 105.1. The LO is 10.7 MHz higher, at
115.8. The image is at 10.7 higher, or 126.5. That's right in the
middle of the aircraft band. The signal comes in so powerful that it
gets thru the frontend with a lot of power. When it hits the mixer, it
pulls the LO and FM's it.

The only way to answer the question definitively would be to get an
aircraft transmitter and put the radio and it in a screen room, and test
try to simulate the problem. Then some measurements might give a
solution.

Well, you *do* need to notify the FCC of your new address. This is done using form 610 and attaching a copy of your license. However, you do *not* need to change your call simply to reflect the fact that you live in a different region. However, if you *want* a call that is like your neighbor's call, then you need to check the box on the 610 indicating that you want a new call sign to be issued.

Michael J Wooding <vhf-comm@g6iqm.demon.co.uk> shared the following
priceless pearls of wisdom:

>In article <314D9822.371D@vertex.ucls.uchicago.edu>, Isaac Kohn
><ikohn@vertex.ucls.uchicago.edu> writes
>>checked! How does an FM receiver with poor-selectivity receive AM
>>transmissions???

>Slope detection

>Mike

Ummm...I came within a couple of milliseconds of falling into that
same trap. Slope detection works for listening to FM on an AM rig;
going the other way around requires imbalance in the ratio detector or
discriminator -- not hard to do on a cheapie radio where the diode
bridge are random diodes thrown into the board.

REQUEST FOR DISCUSSION (RFD)
unmoderated group rec.radio.amateur.dx

Newsgroup line:
rec.radio.amateur.dx Discussion, tips, notices and news for DXers.

This is a formal Request For Discussion (RFD) for the creation of a world-wide unmoderated Usenet newsgroup group.name. This is not a Call for Votes (CFV); you cannot vote at this time. Procedural details are below.

RATIONALE: rec.radio.amateur.dx

One of the many activities enjoyed by amateur radio operators ("hams") is "DXing", the pursuit of making contact with as many countries as possible. As used in this sense, a "country" might be anything from a traditional geopolitical entity to a remote, uninhabited island or coral shoal to which hams venture for the sole purpose of "putting it on the air." The term "DX", apparently derived from the word distance, can be traced to the earliest days of amateur radio experimentation. Today, the term is universally understood by amateur radio enthusiasts. A significant number of the several million licensed amateur radio operators worldwide characterize themselves as "DXers". Annual surveys identify the rarest DX countries (i.e., those with which the fewest hams have made contact), and each year a number of these are visited for anywhere from a few days to several weeks by groups of hams. Often these "DXpeditions" are multinational undertakings conducted by the very best amateur radio operators in the world.

Existing moderated and unmoderated e-mail reflectors are dedicated to DX topics, but many hams have indicated that they prefer discussing DX on Usenet rather than have their mailboxes fill with reflected mail. DX discussion on Usenet generally occurs in "rec.radio.amateur.misc". Amateur radio is an extremely multi-faceted avocation, however, and the wide range of topics discussed in this newsgroup sometimes makes it difficult for individuals interested primarily or exclusively in DX to easily identify articles of interest to them. This problem can be further complicated by the volume of traffic in this newsgroup and the short expiration periods on many news servers. It is for these reasons that a new newsgroup devoted exclusively to DXing is being proposed. Since DX news is often of timely value, this new newsgroup is meant to compliment, not replace, the mail reflectors, which often get messages to their destinations more quickly than news articles propagating through

Usenet.

CHARTER: rec.radio.amateur.dx

The purpose of the "rec.radio.amateur.dx" newsgroup is to provide an unmoderated forum for the discussion of topics of general interest to DXers, including but not limited to:

o announcements of and invitations to join upcoming DXpeditions;

o information about QSL routes;

o tips and techniques regarding good operating practices;

o solicitations for schedules that will enable new DXers to get the last few "new ones" needed to qualify for DXCC;

o periodic postings of data files, such as the DXCC countries list, great circle coordinates used to determine beam headings, etc.;

o administrative policies and practices pertinent to DX operations, such as gaining recognition for a DXpedition by national societies, adding new countries to the DXCC countries list, etc.;

o the general joys and sorrows of participation in or making contact with a DXpedition.

Although the term "DX" is usually used in reference to global communications on the HF bands, operators who use other modes have different applications of this term. This is especially true of VHF and UHF operators, for whom a contact of only 1000 or even 100 miles might well be considered DX depending on the band in which the contact is made. There is currently no newsgroup dedicated to these operators. Although the majority of the traffic on "rec.radio.amateur.dx" is expected to concern HF DXing, proponents of the higher bands are welcome to use "rec.radio.amateur.dx" as a forum in which to discuss their DX activities and, if fact, are encouraged to do so.

Postings that would be considered inappropriate for this newsgroup are those whose topic falls more naturally under the charter of some other newsgroup in the "rec.radio.amateur" hierarchy. For example, discussion of radios used by DXers would be more appropriately posted to the "rec.radio.amateur.equipment" newsgroup. Similarly, general discussion of beam antennas typically used by DXers would be more appropriately posted to the "rec.radio.amateur.antenna" newsgroup.

END CHARTER.

PROCEDURE:

This is a request for discussion, not a call for votes. In this phase of the process, any potential problems with the proposed newsgroup should be raised and resolved. The discussion period will

continue for a minimum of 21 days (starting from when the first RFD for this proposal is posted to news.announce.newgroups), after which a Call For Votes (CFV) may be posted by a neutral vote taker if the discussion warrants it. Please do not attempt to vote until this happens.

All discussion of this proposal should be posted to news.groups.

This RFD attempts to comply fully with the Usenet newsgroup creation guidelines outlined in "How to Create a New Usenet Newsgroup" and "How to Format and Submit a New Group Proposal". Please refer to these documents (available in news.announce.newgroups) if you have any questions about the process.

DISTRIBUTION:

This RFD has been posted to "rec.radio.amateur.misc" in addition to "news.announce.newsgroups" and "news.groups". A draft copy was also sent for review and comment by the original RFD author (Todd Jonz) during autumn 1995 to seventeen individuals who replied via e-mail to him in support of an informal proposal on "rec.radio.amateur.misc" that preceded this RFD suggesting the creation of a DX newsgroup. This RFD has not been circulated by its proponent via any other means.

Interested individuals are encouraged to circulate this RFD in any forum they choose provided that they do so in compliance with all Usenet acceptable use policies.

>I see the smiley, but this isn't funny. The value of amateur radio
>VHF/UHF communications in an emergency is considerable

Given the choice, I'd trust my life to a well-equipped communications center operating on non-Amateur frequencies long before I'd consider placing it in the hands of operators who are poorly coordinated and potentially untrained. Emergency preparedness requires a constant influx of money and coordination of resources, neither of which are abundant in the Amateur service.

>and suggesting that anyone that doesn't want to learn code should
>bugger off makes no sense at all. Even worse, it may be
>unintentional, but this suggestion seems to make an entire class of
>amateurs unwelcome.

The jury's still out regarding any benefits to be derived from the new class of no-code licenses. Will the majority upgrade or will they drop out (or worse, spend the rest of their lives on 2M, wasting spectrum and yammering about things like flea shampoo and fertilizer)?

In the thirty years I've been a ham. I've seen the entrance requirements steadily weakened. First it was theory, now it's code, and soon the attack will revert again to theory. We are slowly deteriorating into a service that has no justification for the frequencies it holds, and which will have no intellectual requirements whatsoever. Eventually, we will either lose the frequencies or simply wake up one day to discover they are no more useful for our purpose than the Citizens Band.

At any rate, my previous post should not be taken to demean anyone who enters our ranks with a valid interest in the hobby. What I was referring to is the fact that no-code licensees are not unaware of the need to eventually pass proficiency tests.

73,
Jack WB3U

3818. GB2RS News 24th March 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-21 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <827461764snx@llondel.demon.co.uk>
Source record: 229190
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 24th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start with a reminder that the Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, urgently if you want to go. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

"Kidlink '96" takes place on Thursday, Friday and Saturday, the 2nd, 3rd and 4th of May. Schools are invited to put on stations so that youngsters, especially those between the ages of 10 and 15, can use amateur radio to communicate with their peers in this country and overseas. For further details, contact Peter Daly, G0GTE, on 01438 724991.

Groups intending to take part in the RSGB's National Field Day contest on the 1st and 2nd of June are reminded that they must register, by sending details of the site to be used, by the 9th of April at the latest. Send the details to David Hill, G4IQM, whose address is correct in the RSGB Call Book. Please enclose an SAE if contest stationery or an acknowledgement of entry is required. Listeners to this broadcast are asked to remind their Club Secretaries of the 9th of April deadline. For further details see page 4 of the RSGB Contesting Guide, which was published in the September 1995 RadCom, or call David Hill, G4IQM, on 01293 882641 weekends or evenings.

Special event call GB2MTL is being used from the station of the late Ray Parsons, G3MTL, today, Sunday the 24th of March. This marks the final session of the "Lazy DX Net", which will be on 14184 kHz from 1330 UTC. Ray operated the Lazy DX Net for around ten years, and he and his wife have given their support for this last session from Ray's super station in Westhoughton, Greater Manchester.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Tonga, LA9GY was planning to be active from the 16th of March to the 4th of April, mainly CW, but with SSB activity in next weekend's CQ WPX contest. He has requested the call A35GY.

From the Malagasy Republic, Gerard, F2JD, is now active as 5R8EN. At present he is using a longwire, but hopes to improve on this soon. He will be on the air until September.

And from the Netherlands Antilles, OH6XY will be active as PJ2/OH6XY from Curacao from Tuesday the 26th of March until the 7th of April. Look for him as PJ9Y in the WPX SSB contest.

Next the Rally News:

The Pontefract and District Amateur Radio Society rally takes place today, the 24th of March, at the Carleton Community Centre, Carleton, near Pontefract. The rally features Morse tests on demand. Doors open at 11.00 am or 10.30 am for disabled visitors, and talk-in is on 2 metres channel S22.

The Bournemouth Radio Society Annual Sale takes place at Kinson Community Centre, Pelhams Park, Millhams Road, Kinson, Bournemouth today, the 24th. Doors open at 10.30 am and talk-in will be on S22.

Next Sunday, the 31st of March, the Magnum Radio and Computer Rally takes place at the Magnum Leisure Centre, Harbourside, Irvine, Strathclyde. The event features the usual traders, an RSGB book stall and membership information stand, and Morse tests on demand. Doors open at 11.00 am. For further details, ring 01294 215457.

The Thames Valley Electronics Rally will take place at Kempton Park Racecourse, Staines Road East, Sunbury on Thames, in Middlesex next Sunday, the 31st. The event features retailers, antenna and accessory suppliers and a bring and buy stall. Doors open at 10.30 am. For further details phone Lucy Phillips on 01494 450504.

The Amateur Radio Caravan and Camping Club's next rally will be at Milton Keynes, over the Easter weekend of the 4th to 8th of April. There is no trading at ARCC rallies, but any amateur wishing to attend as a caravanner or tent camper is invited to send an SAE for details and a booking form. Booking forms must be returned at least one week before the event. Write to the membership secretary, Alan Gard, G4LWA, whose address is correct in the RSGB Call Book, or telephone 01462 811208.

Many rallies now offer RSGB Morse Tests on demand. Candidates should note that, although pre-booking is not required, they will need to bring with them two passport type photographs and the test fee.

GB3HV, the Amateur TV Repeater at High Wycombe, now has a new operational mode. During 23 centimetre contests it can be switched to "contest mode". Through operation is inhibited along with the information pages. Only the 15-minute identification is transmitted. The change has been made to minimise interference to local 23 centimetre contest operators. For further information please contact Mike, G8LES, on 01420 563859.

Now for the HF contest news:

We know of no HF Contests this weekend. Next weekend, the CQ WPX SSB Contest takes place for 48 hours from 0001 UTC on Saturday the 30th of March. This contest is on all bands from 1.8 to 28 MHz, with the exception of the three "WARC" bands. All stations can work any other station, and the multiplier is the sum of all the different prefixes contacted.

Next some VHF contest news:

The RSGB 70 MHz Fixed Station Contest is taking place today, the 24th of March, from 0900 to 1300 UTC. The full rules were published in the RSGB Contesting Guide in the September 1995 RadCom.

Before the solar factual data, here is an explanation from Neil Clarke, G0CAS, of a couple of the terms which have recently been introduced in this broadcast. Firstly, "Bz".

The new WIND spacecraft measures solar wind speeds, density in particles per cubic centimetre, the sector structure - that is towards the sun, or away from it - and Bz. Bz is the magnetic angle of the solar wind, recorded in nanoTeslas from zero. As the earth's magnetic field runs in a northward direction, coupling with the solar wind takes place when the wind has a minus or southward orientation. The greater the negative number of nanoTeslas, the more it couples and the more it disrupts the ionosphere. If Bz is plus, that is northward, there is no coupling so the outburst just passes us by.

Secondly, "plage". For some time after sunspots have decayed from the solar disc the "magnetic footprint" associated with that group will remain and may cause geomagnetic disturbances on the next solar rotation.

And now the solar factual data:

The period from 11th to the 17th of March saw solar activity at very low levels and the geomagnetic field up to "active" levels. Sunspot numbers increased from 18 on the 11th to 27 on the 12th. After that, they declined to end the period at 12, with a mean of 20. Solar flux levels peaked at 73 units on the 12th but then declined slightly to 70 units on the 15th. The average was 71 units. On the 11th a new sunspot group produced frequent B class flares but as the group decayed it became less flare-productive. Electron fluence levels increased from moderate levels on the 11th to a high level. X-Ray flux remained at A1 units throughout. The 90-day solar flux average on the 17th was 73 units, one unit up on last week.

Geomagnetic levels were at "active" levels on the 11th with an Ap index of 26. Levels then declined and were "quiet" from the 14th, with an average of Ap 13 units. The following data covers the period from the 5th to the 11th of March. The aa indices, as supplied by the British Geological Survey, started at "quiet" levels up to the 9th, but then increased to just "sub-storm" levels by the 11th, with 44 nanoTeslas recorded. The average was 18.5 nanoTeslas, about K2. Solar wind speeds were average, that is between 350 to 400 kilometres per second, and the

particle density increased from 8 particles per cubic centimetre to 20 particles per cubic centimetre on the 8th and 9th. The Bz was predominantly southward on the 8th and northward on the 9th, with maximum deflections of 7 nanoTeslas. For the rest of the period it was at zero.

I'll repeat the figures: spots - 20, flux - 71, Ap - 13, X-Ray - A1.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies, as reported by Meudon for the period from the 8th to the 14th of March, saw little change. However, they did increase to 8.5MHz on the 11th, giving the best daily figure for some time. This did not last - by the following day levels had collapsed to 6.8 MHz. The average was 6.3 MHz. The darkness hour lows increased to 3.9MHz on the 10th, but averaged only 2.9 MHz. The daytime highs took place between 1200 and 1900 with the darkness lows between 0300 and 0600.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view. The solar disc may become spotless on some days. Solar flux levels are expected to decline to about the 70 mark later in the week. Geomagnetic levels are expected to increase to "unsettled" between the 21st and 24th, and be at "quiet" levels the rest of the time. MUFs during daylight hours are expected to be about 18MHz for the south, with darkness hour lows about 10MHz. Figures are expected to be a few Megahertz lower for the north.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 X-Ray Alfa and G7 Whisky Lima series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Victor series.

ARLD016 DX news

ZCZC AE58
QST de W1AW
DX Bulletin 16 ARLD016
From ARRL Headquarters
Newington CT March 21, 1996
To all radio amateurs

SB DX ARL ARLD016
ARLD016 DX news

This week's bulletin was made possible with info provided by Hans, OH2BDP, Jorma, OH2KI, Jean Michel, F6AJA, Mike, W0YR, Ron, AA5DX, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

MYANMAR, XZ. The Central Arizona DX Association XZ1N DXpedition slated for April 2 to 12 has been postponed. A number of unsettled regulatory matters between military and ministries seems to be the crux of the problem.

MARION ISLAND, ZS8. Chris, ZS5IR/ZS6RI, will be active early May until mid-1997 signing ZS8IR. He will operate SSB, CW and RTTY on 160 through 6 meters using primarily wire antennas, including rhombics and vee beams. Chris operates in contests, too. QSL via ZS6EZ.

CROZET ISLAND, FT. Sam, FT5WE, plans to be up and running on 80 meters in a couple of weeks. He continues to work 30 and 40 meter CW. QSL via F6GTW.

MARKET REEF, OJ0. Listen for Finnish operators on the air until March 24. Original plans called for CW and SSB, though due to popular demand RTTY will also be worked. Please be patient on RTTY, as operator OH2KI is new to this mode. QSL OH0MB via OH0RJ, OJ0/OH1VR via OH1VR, and OJ0/OH2KI via OH2KI. The next Market Reef DXpedition by OH1VR is planned for the CQ WW WPX CW contest in May.

SVALBARD, JW. Three Norwegian operators will sign JW6RHA, JW9THA and JW8KT March 31 to April 7. They will use both SSB and CW. Listen for their SSB around 14248 and 21248 kHz.

MADAGASCAR, 5R. Gerard, F2JD/5R8EN, will be on Nossi Be Island, IOTA AF057, March 22 to 24. Listen for 5R8EN/P.

TUNISIA, 3V. XE2CQ will be in Tunisia on business April 14 to 24 and plans to guest operate club station 3V8BB. On his trip home he will try to stop and operate in both EA9 and ZB2. QSL via AA6BB. Meanwhile, Hein, DL2OBF, says cards have not been printed for the late November 1995 German operation of 3V8BB. As soon as cards are received from the printer, all contacts will be confirmed. Please be patient.

CHAGOS ISLANDS. Ron, AA5DX, will sign VQ9DX until mid-June and operate all bands. QSL via Ron Marra, Marginal 301-C, La Rambla Suite 205, Ponce PR 00731.

HEARD ISLAND, VK0. A recent press release announces the team now consisting of 20 operators representing 9 countries. The ops are EA8AFJ, G0LMX, HB9AHL, JH4RHF, KA6W, K0IR, K4UEE, K9AJ, KK6EK, N6EK, NP4IW, ON6TT, PA3DUU, RA3AUU, VK2TQM, W6OTC, W8FMG, WA0PUJ, WA3YVN, and 9V1YC.

THIS WEEKEND ON THE RADIO. Pick up band/state credits by getting in the Alaska QSO Party this weekend. The European EME Contest will also be going on. See page 97 in March QST for more info.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 MARCH AND FORECAST FOR 22 MARCH - 24 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 20 Mar
Daily Proton Fluence >1 MeV: 5.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Mar 23 Mar 24 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Mar: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with a minor
storm period 15-18UT.

Estimated Indices : A K Observed A Index 20 Mar
Learmonth 22 3234 4544
Fredericksburg 22 19
Planetary 20 17

Observed Kp for 20 Mar: 3334 3343

2B. MAGNETIC FORECAST
Date Ap Conditions
22 Mar 18 Unsettled to active
23 Mar 15 Unsettled
24 Mar 12 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
21 Mar Normal-fair Normal-fair Normal-fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
22 Mar Normal-fair Normal-fair Fair
23 Mar Normal Normal-fair Fair
24 Mar Normal Normal-fair Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
21 Mar -14

Observed Australian Regional MUFs:
Darwin: 15-30% depressed until 12UT, then near predicted monthly
values.
Townsville: 15-30% depressed until 11UT, then near predicted
monthly values.
Sydney: 15% depressed until 11UT, then near predicted monthly
values. spread F was observed during local night.
Hobart: 15-30% depressed until 13UT, then near predicted monthly
values.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
22 Mar -15 about 15% below predicted monthly values
23 Mar -10 about 10% below predicted monthly values
24 Mar -5 about 5% below predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 20 March
and is current for interval 21-22 March.

Hello Mark,
I'm a Radio Technician in the USMC (16 Years). We have within the last year started using Gell Cell / Sealed Lead Acid Batteries as an alternative to Nickel-Cadmium in that these batteries do not develope a memory as the Nickel-Cadmium do. The pros so far are: no memory as stated before (no expensive conditioning charger required), shorter charge time (80% recovered within 1st hour), and not classified as hazardous material., cost much less per use than the standard Lithium Sulpher Dioxide primary batteries. About $0.30 - 0.50 per use vice $53.00 - $65.00 for Lithium one time use. The only con so far is the life cycle (about 14 hours verses 24 from the Lithium). I have been in contact with the Army Power Source Research Labs to get my questions answered about these batteries. If I can assist in answering your questions just let me know and I will use the sources I have to try and get you answers.

Jerry

My newsreader claims that S. Sampson (ssampson@telepath.com) wrote:

(**stuff deleted**)

: You're dreaming. First of all, the frequencies are available because
: of a population. Your proposal would cut the population to a few
: thousand, and lose authorization. The FCC will not allow a small
: segment of the population to control huge frequency blocks. No matter
: how technical that population is.

They won't? How many people do you think actually CONTROL the broadcast
media? Far fewer than the total amateur population. And broadcast (AM, FM, TV)
has a LOT more spectrum than amateur radio. For example, of all spectrum
below 100MHz, broadcast has nearly half of it. If you include all of the
FM broadcast band (to 108MHz), the broadcasters have more than half of
it!

: My second view, is that AM, FM, SSB, FSK etc be abolished. At no time will
: an Amateur operate on one frequency for more than 100 ms (milli-seconds).
: Each band segment should be fully converted to Spread Spectrum. An agreed
: on protocol for channelization.

Naw... you'd outlaw direct sequence that way - probably a better way.
However, the govies are unlikely to allow much in the way of effective SS
because it would provide communications that are much more difficult to
monitor. Like you said, you're dreaming...

A holdover from this earlier alphabet can be noted in the names of "conditions" used to specify what doors and hatchers are secured for purposes of watertight integrity.

During condition X-ray (the normal one) all openings labeled with an X are closed (unless they need to be opened temporarilyfor access) while the others are left open to make it easy to move about the ship. At condition Yoke, all openings labeled X and Y are closed, and at condition Zebra all doors and hatches are closed. Condition Zebra is "set" during battle stations.

>interest in the hobby, I believe, largely in part because he was only
>exposed to a small facet of the hobby, that being FM.

And having learned Morse Code would have definitely kept him in?

There's more to 50MHz and up than just FM. There's all kinds of data transmission, ATV, people do neat propagation studies and things like EME. Microwave experimenting is something I wish I had the time for. None of which *require* knowledge of the code (although much EME may still be done using it, this too will change).

> The truth is he was
>too lazy to put in a couple of hours a day for a month or two learning the
>code enough to be able to pass 80% from a multiple choice test.

Dad! You're a lazy bum, and I think less of you because you didn't want to do something (learn the morse code and go through the amateur radio hazing) you don't particularly like for benefits that are less-than-clear.

Love, your son.

> I will
>have a hard time being convinced that ANY Hams"can't" learn the code,

You cannot motivate another person to do anything. Each of
us finds motivation for ourself. (Stated differently, people
don't do things for YOUR reasons, they do them for THEIR
reasons.)

Perhaps your attitude is showing in the last lines I
quoted above. Instead of preaching about "desire" and
"put in the time", you should be showing off the benefits.

>actual transmitting frequency.

Even if you buy this argument, does that mean that only the two meter band
is the problem? If I try to bring in a 440 MHz radio are you still going to
complain? If your 150 MHz radio can't handle having a legally operating
148 MHz radio nearby, your solution is to ban the other radio? Should a ham
convention be able to ban public service 150-155 MHz radios from their event?
What's the point of having the FCC license other services to certain bands if
you're just going to say, "Yeah, but that's still to close to our frequencies."?

(I know, too many question marks in that paragraph.)

I have to agree with Dana; I'm amazed at the "logic" being used in this
discussion. I've also noticed in this thread that when you start to dispute
the interference aspects, some proponents of the ban will then switch over to
claiming it's for security reasons, and vice versa. I get the impression that
its more an issue of "We want to be in control of everything."

My position is that nobody is forcing the security force to use radios, but if
it helps them do their job that's fine. However, they should respect the other
legal users of the RF spectrum at the same time.

-Brian

Give Personal Database Applications a call at 770-307-1511 (makers of
Logic Logging program). They offer the LCU3 interface device which is
an interface that is housed inside a DB-25 connector. The interface
gets its power from the computers serial port. The unit resides
between the computer serial port and your HF rig. They have several
models availabel depending on the rig your are trying to interface.
The units are designed and made by Phil Whitehouse (W1GEE) and are
priced in the $50.00 range. Give them a call for details as some rigs
require additional stuff (some Kenwoods require the IF-10 kit be
installed).

hi people...

I need some help on building a SSB transceiver, I have the

design, but I need to do some modifications to it, and I don't know how

I have to modify the VFO to a larger range, and the BPF to a larger

range too...

So anybody would help me, please mail me at the following addresses...

please.... thanx!!

I have come across a telephone/modem answering/security device called The Sleuth - made by C. H. Systems of Los Angeles. I understand it can be programmed to call back the modem/caller - if the proper password is provided.
C.H. Systems, I am told, went out of business some years ago.
Does anyone know how to reprogram The Sleuth - or what software is needed - to use it again?

> you have to strip down and rebuild a radio. I know you have to get some
> electrical parts.

No - in order to get a Class B licence you must pass a 2-part multiple
choice (or is that multiple guess?) test on theory and regulations.
That's all.

In order to get a Class A licence you must pass the same test, plus a
12 wpm morse test.

A few hours study of the licence conditions should see you safely through
part 1 (regulations). Anybody with a remotely electrical/electronic
background should breeze through part 2 (theory).

There's also a Novice licence which *does* involve some practical work
under the guidance of an instructor, but since you've indicated that
time is a problem, the full licence seems more appropriate.

Good Luck!

Be sure to check with local hams to see if there may be code practice sessions conducted on a local 2-meter station (probably a repeater, if anyone does it). Many places a repeater club sponsors such sessions.

SSB sw receivers aren't too expensive at hamfests. You don't need a rig to get W1AW practice transmissions.

By the way, the rules state that you are supposed to return the space to the hamvention for a refund. The trouble is that a friend of mine did just this last year to follow the rules, etc. and he like to never got his money back. The dummies make it so hard to follow the rules that he is never going to again.
Just my input.

You wrote this message using an even older technology (the written word). Which you are required to show not just knowlege of but proficiency in to complete school.
If a technology is in common use, it's age isn't important. If you don't think Morse Code is in common use, then you need a better receiver.

In that case it was likely audio rectification in the radios

audio amp. You'll notice this on some car radios as you pass

large trucks.

>: "AM rejection" is a spec which applies to FM radios. It is worse on

>Actually, when the circuitry is overloaded, it should limit and prevent

>AM from getting thru. Maybe the circuitry is not overloaded enough. ;-)

First, some detectors do not depend on heavy limitng.

Second, since AM goes to zero power in the modulation

trough, no limiter will totally eliminate a fully modulated

AM signal. One the AM signal goes through the limiter, it is

now a phase modulated signal. The phase mouldated signal

will be easily detected in the FM detector.

Special Event Information

HamDaze at Arizona Science Center: The Center for Amateur Radio Learning (C.A.R.L.) will be hosting HamDaze Weekend March 23, 24. Several Phoenix area radio clubs will be setting up hands-on demonstrations and exhibits. Amateur Television, an HF station and a two way laser communications device will be just some of the attractions at the event. A test session will beavailable for the No-Code Technician License at 10:00 a.m. on Saturday March 23. KC7LUL will be on the air in the phone portion of the novice 10 meter band and general 15 and 20 meter bands. For a certificate send a QSL card and 9"x12" SASE to C.A.R.L. P.O. Box 51048 Phoenix, AZ 85076-1048. Visitors to ASC will be able to make radio contacts under the supervision of licensed volunteer operators. The Arizona Science Center is located at 147 E. Adams.The hours are Saturday 9 - 5:00pm and Sunday 12 - 5:00. Adults $4.50, Seniors and 4-12 yrs old $3.50, 3yrs and less are free. For details call Rick at 561-8405.

With the majority of newly licensed hams receiving Technician Class tickets, I don't see how anyone can argue that non-hams as a class perceive hams as a class of key-tappers.

An earlier message said that we need a better stereotype of hams than that of the asocial mike potato with the ugly tower in the back yard. I agree, but I suggest that today that stereotype is already giving way to that of the helpful volunteer with the HT or mobile rig coordinating activities at a community event. If people don't know that those volunteers are hams, whose fault is that?

Here's a clue, Drew:

The FCC does have jurisdiction over common carriers (which carry most
internet traffic). And they set the rules as to how private networks
connect to the public network.

In fact the FCC probably spends as much time dealing with non radio
communications issues as they do with radio.

And all it takes is congress to create more jurisdication if the FCC
doesn't already have it.

The point of my paragraph is that many non-ham radio people perceive
amateur radio as being of little or no value. Eventually, these perceptions
influence how the service is treated by the FCC.

>following the followup line

No, you didn't - I'd set the followup-to: line to rec.radio.amateur.policy,
and you still followed up to rec.radio.amateur.misc...

Special Event Information

HamDaze at Arizona Science Center: The Center for Amateur Radio Learning (C.A.R.L.) will be hosting HamDaze Weekend March 23, 24. Several Phoenix area radio clubs will be setting up hands-on demonstrations and exhibits. Amateur Television, an HF station and a two way laser communications device will be just some of the attractions at the event. A test session will beavailable for the No-Code Technician License at 10:00 a.m. on Saturday March 23. KC7LUL will be on the air in the phone portion of the novice 10 meter band and general 15 and 20 meter bands. For a certificate send a QSL card and 9"x12" SASE to C.A.R.L. P.O. Box 51048 Phoenix, AZ 85076-1048. Visitors to ASC will be able to make radio contacts under the supervision of licensed volunteer operators. The Arizona Science Center is located at 147 E. Adams.The hours are Saturday 9 - 5:00pm and Sunday 12 - 5:00. Adults $4.50, Seniors and 4-12 yrs old $3.50, 3yrs and less are free. For details call Rick at 561-8405.

Hi.. have the call book in my hot hand. Here's the QSL A.D. for ZL1RS,
well, the one in the 1994 callbook anyhow, good luck

ZL1RS
R.J. Sutton,
4a Crompton Road,
Massey,
Auckland 1008
New Zealand.

Happy hunting... ZL2TQM

3866. Icom 735 query

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-21 00:00:00 UTC
From: Thomas.Smith@228.woodybbs.com
Message-ID: <347_9603210542@woodybbs.com>
Source record: 229238

Need a touch of help on this one, as I have a chance to buy this unit...

A bit of research shows me the Icom 735 is NOT able to do any satellite work...i.e., it cannot use the CT-16 satellite converter supplied by Icom...

As I am interested in working ALL ham modes, can anyone tell me if the 735 can do ANY satellite work of any kind...appreciate this info!
* RM 1.31 2831 * ... Ham radio operators do it with higher frequency.

That's a valid criticism of the accuracy of the official numbers as a
reflection of the actual active amateur population, and I've made it
myself on other occasions. However, the difference in the official
numbers and the real numbers is very unlikely to be threefold, and
the official numbers for 1960 suffered a similar inflation due to
deceased amateurs not being promptly purged from the roles, and due
to disillusioned teenagers dropping out. Both those factors existed
then as well as now. So I don't think we can escape the conclusion
that the amateur service has grown approximately threefold, though
we may not be able to put a precise number to either the 1960
active amateur population or the 1996 active amateur population.

I can copy it with a 1.5 meter dish and preamp, with a good enough SNR
to pass low rate information. An 18 inch dish would be, IMHO, pushing
toward the limit of usability, if not detectability, of the Oscar 13
signals.

>Back when it flew 2.4 GHz was real exotic territory. These days you
>can buy a 2.4 GHz transceiver from Icom (the IC-970 with optional band
>module).
>
>Actually, what the DBS people have really done is to run high power.

50 watts for a broadcast quality digital *television* signal is not
what we'd generally call "high power", though for a satellite it is
high power. But that's about the same power used for C and Ku band
analog TVSATs, and I think that you'll be forced to agree that
you need much more than an 18 inch dish to successfully receive them.
The real difference offered by DBS is the fact that it is digital,
with the coding gains that can imply.

>We could do the same--a tiny quadrifilar helix will work just fine with
>100 watts. A water cooled 2C39 easily does 100 watts on 1269
>MHz. But, from a safety standpoint, lower power and a bigger antenna
>makes much more sense.

I'm not so sure that even P3D could house a water cooled 2C39 and
feed its power demand. It'd take over 300 watts of DC input to get
that 100 watt output (the heater alone draws 60 watts). Even P3D's
power budget would be exceeded. And water cooling doesn't buy that
much when there's no convection. Not only would you have to mechanically
pump the water through a radiator, the radiator would have to be just
that, an actual radiative cooler with no help from convective atmospheric
flows. I suspect it would be both a power bus and thermal control nightmare.

And if it were a shared analog transponder, each individual signal would be much weaker than 100 watts. If there were 2 or more signals in the passband, the power delivered to Earth per signal would be less than from current C band analog TVSATs, so you're back to a 3 meter dish again.

Remember, the power budget limit is in orbit, not on Earth. It depends on the amount of solar panels and batteries the satellite can carry. Those are fairly hard limits for amateur budget satellites, IE we can't hope to loft nuclear reactor powered ROSATs like the Soviets used to launch, or the huge solar arrays used by MIR. So we need to get gain another way. Coherent digital modulations are about the only way to beat the physical limitations on the satellite and still allow small Earth stations.

It isn't when you consider the small volume sold. Most of the cost is
in handling and stocking and marketing the devices, of course. If you
don't want to pay, then build your own. Digikey sells the MAX232 chip
which will do the job, or you can go to Radio Shack and pick up a
1488 and a 1489 and do it the old fashioned way. In either case, you're
out less than $10. The MAX232 is the better way, because it only needs
+5 volts. The older chips needed external plus and minus supplies.

You can also kludge it with an opamp or a couple of transistors and
diodes, and that'll give you a parts cost under a dollar, though it
is considerably more trouble, and won't work at as high a baud.

3871. Re: Using Omni directional antennas for Pacsasts?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-21 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Mar21.184543.29578@ke4zv.atl.ga.us>
Source record: 229243

In article <4iqre6$kj2@crl.crl.com> jeffj@crl.com (Jeff Jones) writes:
>I was wondering how well omni directional antennas would work with the
>Pacsats? As they are low orbit and fairly line of sight it seems a
>omni would work. Can someone enlighten me on this?

Yes, omni antennas can work, especially on the PSK 1200 baud birds.
A simple vertical has a null directly overhead, but studies have
shown that the bulk of any LEO sat's track will be at 30 degrees or
less above your horizon where the vertical works well. The ARRL
books recomend a turnstile, but it has its major lobe straight up,
and has nulls toward the horizon, so while it will work better
during the overhead part of a pass, it will work worse during the
bulk of the pass.

The pacsats aren't well 3-axis stabilized, and the orbital geometry
presents a different profile to your station as the satellite moves
through its orbit, so if you use a linearly polarized antenna, you'll
suffer fades called "spin modulation". That can be bad news if you
don't have enough signal to ride through the fades, causing dropouts
that will result is spoiled packets.

The solution to the spin modulation problem is to use a circularly
polarized antenna. While it gives away 3 db against an antenna of
the same polarization as the satellite, that polarization is always
changing due to spin. That spin modulation can give you 30 db fades
when perfectly cross polarized, so *on average* the circular polarized
antenna is better than a linear polarized antenna that doesn't match
the polarization of the satellite moment by moment.

Now there are a few circularly polarized omni-directional antenna
designs. One of the best is called the Lindenblad. Another that is
at least partially circularly polarized is the eggbeater style.
These latter antennas have recently appeared as commercial products.
The Lindenblad you have to build, the design is in the Satellite
Experimenter's Handbook. This isn't a hard antenna to build, using
300 ohm ribbon for elements and PVC pipe or wood for supports, but
be careful, it's easy to phase it backwards, then it won't work
worth spit. (I know, I did it wrong the first time.)

Another circularly polarized antenna is the quadrafilar helix.
These antennas work very well, but can tax your mechanical
skills to build. I found it impossible to build one from a
description and a picture. I actually had to go see one in
person before I figured out how to make it (then it turned
out to be easy to do). You can make one from CATV hardline
tag ends (free salvage), so the cost is really reasonable.

Of course, because gain is low with any of these antennas compared to a beam, a preamp at the antenna is a big help, and you'll also need to run a healthy amount of uplink power. 5 watts *can* work, but 50 watts will work *much* better. The 1200 baud PSK birds need less SNR margin than the 9600 baud FSK birds, so use of omni antennas is easier with them. For the 9600 baud FSK birds, a gain antenna works much better.

Gary

The number of people who control the broadcast media is irrelevant.
The number of people who *use* the broadcast media is the relevant
population, and that's vast, nearly the entire public. You don't
measure a newspaper by how many presses it has, you measure it by
how many copies it sells. It's the audience that counts when determining
usage of broadcast spectrum.

Just send in a form 610 with "change of address" checked. If you
want a new call sign, check that box too. Otherwise you can keep
your old call sign. The FCC doesn't require your call sign to match
your call area anymore. Note too that this will *not* renew your
license. The FCC won't renew your license until it is within 90
days of expiration (and then they'll automatically mail a form to you
at your license address, just sign it and mail it back). This is a
good reason, besides the fact it's the law, for you to keep your
address current with the FCC.

3880. This Week in Amateur Radio #156 (for air through 3/29/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ptKLNGa.sanderman@delphi.com>
Source record: 229052

Here is a summary of news items covered on edition #156 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 29-Mar:
-
1. STS-76 Atlantis Mission Begins, Commander Gets Ham License
2. Mir-22 Crew Awaits Atlantis Astronauts, Packet BBS Turned Off
3. Astronaut-Ham to Head Joint Operations in Star City, Russia
4. FCC Issues New Amateur Call Sign Series to FEMA Offices
5. Suspect Arrested in Murder of Louisiana Couple
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. ARRL Releases Vote Count as 2 NY Counties Rejoin WNY Section
8. New ARRL Section Manager Appointed in Eastern New York
9. League Files Comments Seeking More Authority for FCC
10. Wildcard Team Leaders Selected for WRTC-96 Contest
11. Upcoming Special Event Stations with George Bowen, N2LQS
12. "Amateur Radio Newsline" - Edition #971 from Los Angeles
13. Debbie Bert, KB8MFT, Offers Hints on Building a 6 Meter Dipole
14. Weekly Propagation Forecast
15. "The RAIN Dial-up" from Chicago
16. Friday SAREX Contact to be Aired on Satellite
17. Solomon Islands Issues Stamp Set Honoring Marconi
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis, AJ1R, of St.
Petersburg, Florida, where listeners can hear "This Week in
Amateur Radio" on the AJ1R repeater system on 51.84, 145.23,
147.285, 442.075, 443.625, and 443.95 MHz serving Florida's Central
Gulf Coast.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,

Incorporated as a service to the amateur radio community. Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

3881. Re: Need help with 8 inch floppys

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: wsoon@primenet.com
Message-ID: <4ivl2u$eqc@nnrp1.news.primenet.com>
Source record: 229053

Well, blast! I once had some CP/M S-100 systems ranging from Altairs to Cromemcos and Vector Graphics boxes. I ran a pair of Shugart 8 inch drives with these, and was doing fine until the IBM PC came out in 1981 or so. Later I sold and traded off my S-100 stuff. But, I kept some 8 inch diskettes.

Years passed.

About a year ago I wound up with some S-100 boxes -- and some S-100 peripheral cards. But, no 8 inch drives!!!

I did discover that I have several 8 inch diskettes which have either valuable or sentimental stuff on them. I would like to transfer them to modern disk media without having to obtain (semi-permanently, because I doubt I could resell them), another 8 inch drive and controller,

So if there is anyone in the Los Angeles area who can read these 8 inchers and transfer what's on them to 5-1/4 or 3-1/2 media, I would certainly like to hear from them....

The Telecommunications Act of 1996 removes the conflict of interest wording from existing FCC regulations...allowing your local Ham Dealer to become a Volunteer Examiner, and give you your Amateur test.

Does this bother anyone? Or am I simply getting too conservative in my old age?

>>An in-depth, amateur radio interview, 2 hours in length, is now
>>available on the net, via RealAudio, courtesy of TAPR and Greg Jones.

And why is this of importance? Was it a particularly good interview?
Does it promote Amateur Radio? Does it expose Goldwater's
ultra-conservative politics? Why should we be interested???

The fact that this Amateur Radio program exists is important and
pertinent. But please do us a favor and write a "mini-review" of the
interview, and let us know why you think it's valuable for us!

Organization: Lander Internet
Message-ID: <31532811.6861@lander.es>

These are the rules for "DX LUGO AWARD":

DX LUGO AWARD

The "AWARD LUGO" is given for the Group DX LUGO to all the radioamateurs and SWL,GRATUITOUSLY and
have the next characteristics: its size is of 44 X 32 ems., it's printed in lithography with
many colours and its design was made by people of the famous ceramic art factory "SARGADELOS":

"LUGO DX GROUP" issues this award according to the following rules:

1.- Contacts with Group members, except repeaters, after January 1st, 1983

2.- Contacts required are:
- Spain.......15
- Europe...... 5
- And DX...... 3

3.- The same station can be contacted in different band, but only one contact after 24 hours with
the same station.

4.- Applicants must send QSL or certificate list by one Radio Association QSL will be returned by
registered mail. FREE AWARD.

5.- SWL the same rules

MEMBERS OF "LUGO DX GROUP"

EA1: AAA (ex: EClDNO y AO1DNO), AAB (ex: EB1EQQ, EC1DLB y AO1DLB), ABC, ACI, ADN, AEV, AFQ, ARG, AUI, AUZ, AVW, BCA, BCB, BCD (ex: EHlBCB), BCT (ex: EC1DDI), BDT, BDU, BDV, BFT, BID, BIL,

ROTFL

In my experience, most radio amateurs start off trying to "solder"
connections on PCBs, but soon end up "soddering" them!

(Bet the Yanks won't understand that one either ....) :P

I would hope that people who use the amateur radio groups would use the same ettiquete that they would use on the air. Maybe critta66@shadow.net is not a ham. I have a jnos bbs and use nntp so that local hams can read these groups.

Maybe we should send some flame mail at critta66@shadow.net, and then those of us who post nntp on our packet systems wouldn't have to worry about what our users are gonna see come over the air.

Thanks and now I will get off my soapbox and go back to my bbs and see what other trash is on my system.

> to gather "overwhelming" support for their agenda.

Hello, Vince,

I got a bit confused, but I assume you mean the February 1996 editorial.
:-) I reread the editorial and just did not see the same handwriting on
the wall that you are envisioning. To quote Mr Sumner, "At its meeting
January 19-20 ... the ARRL Board of Directors will be grappling with the
parallel question of how to structure our domestic consideration of these
issues." (I note that "these issues" covers a lot more ground than the
Morse Code issue - Ed), "Membership input will be important in developing
ARRL positions."

> That's fair enough.

That's fair enough by me, too. I have met a number of ARRL Directors in
my tenure here; I have found that most of them spend a lot of time asking
for Member input on the burning issues of the day. They are available by
phone, by letter, by email and spend about half their weekends travelling
to conventions and club meetings in their Divisions. I just don't
construe that as "gathering overwhelming support for thier agenda." I
construe that as "soliciting input for their agenda."

>But it should ALSO be well noted that then-Director Mendelsohn stated at Ham Expo in Long
Island, New York on 10 November 1990:

> "There's no need for amateur radio to remain a technical hobby,
> simply because technicians and engineers can't even find jobs
> today. You know, my father was a plumber, and he advised me to
> do the same. And looking back on it, you know, he was absolutely
> right."

I don't know the context, so I can't completely interpret the overall
intent. I do know that since 1990, I can't recall that he has managed to
eliminate the technical part of Amateur Radio, or even tried. I also
know that he is still works for a major network in NYC and has not
changed his profession to plumber. :-)

> Is ARRL going to push for an easing of Morse Code requirements?
> You bet it is!

Maybe, but maybe not. From all the indications I have, that will depend mostly on the input to the policy makers of the ARRL, our Division Directors. On this forum, I have often encouraged all hams to make their views kwown to their Directors.

> And it appears clear to me they will also support
> an easing of theory requirements as well. Amateur radio has fooled
> with this problem for too long a time. Now it finds itself in deep
> trouble. Small wonder.

It is not clear to me that we will support the easing of theory requirements as well. I can't see it in the February article, I can't see it in the many hours of staff time spent preparing technical publications, why, the ARRL Handbook has been increasing in technical content, not decreasing, over the years. I don't see it in the work that goes into QEX, our "high tech" magazine. And I won't read it into the fact that we are devoting a fair chunk of our resources toward the beginner; there are a LOT of beginners in Amateur Radio and we want to see them become active and integrated with us "old timers." They have our support, but IMHO, that is exactly the way it should be.

By the way, if I had my way, I would see a clear strenghtening of the theory requirements. If I had my way, if the requirements for Morse proficiency were to change, I would prefer to see them change slowly, to give the Service and those who believe in traditions time to adjust. But when it comes to these policy matters, I matter no more than you, and probably a bit less; the Directors know they can ignore me if they choose. :-) But if you have concerns about ARRL's Morse Code or technical-requirement positions, please do what the February Editorial asked for -- tell your Director what direction you think we should take and why. No matter which way you see it, even if it goes against what I would like to see. . . if I had my way. :-)

KAWIN NEWS

KaWin 6.36
Kantronics to distribute KaWin
KaWin FTP Site closure
KaWin News mailing list issues

Version 6.36 of KaWin, available now from the KaWin Home Page, is just a maintenance release with a few, very minor, fixes. But, due to problems with my mailer, many people missed the announcement of version 6.35, with support for the Buckmaster Hamcall CDROM.

Also, I am very pleased to announce that Kantronics will be packaging KaWin on diskette with every TNC and TNC-upgrade. This is the same shareware KaWin that is available from the KaWin Home Page and will increase the distribution of KaWin several fold.

All files that were previously available from the KaWin FTP Site have been consolidated in the KaWin Home Page. If you do not have Web access and had previously relied on FTP access to these files, send me email to that effect and we'll arrange to get them to you.

I have purged all addresses from the KaWin News mailing list that have had delivery problems. If you did NOT receive the email version of KaWin News announcing KaWin 6.36 and would like to be on the mailing list, please subscribe by email request. To add your email address to the KaWin News mailing list, send email to stan@mutadv.com with the word SUBSCRIBE in the subject line. If your email address is modified in any way by your host or gateway, please include the correct address in the body of the message. Thanks.

73, Igottago... Stan ..

Unfortunately, a significant majority (or perhaps a very vocal minority)
of tech-lites in this region (RI) are scumbags and n'er-do-wells that
merely view amateur radio as "grown up CB". Its "cool" because when you
un-key you don't need a roger-beep, the repeater does it for you! (Although
recently some morons have taken to using roger-beep mics on local
repeaters that already have courtesy tones.)

Ten years ago you would never discuss what equipment you had, if you
were going on vacation, etc., because someone with a scanner might be
listening and they might try to break in to your house.

Today the same concern exists, except it isn't the "scanner" users
that might break in, its the scumbags we've let in to the hobby since
1991.

Jack... No argument from me on what you're saying here... But one
comment: Where have you been? The theory has been CONSTANTLY
weakened, even during the same time they've been laxing off on the
code requirement. First it was breaking Element 3 into two parts,
then it was "rewriting" the Novice question pool to a 7th/8th-grade
reading level.

The "I want something for nothing" crowd is alive and well in the
theory arena too.

In a previous article, god@netaxs.com (God) says:

>I saw a mod in the oakland archives from a WHILE back mentioning that it was
>possible to mod the radio shack 49Mhz walkie talkies for the 6 meter band.
>Does anyone have any details on this? The oakland archives go dry after only a
>teaser.
>
>thanks
>
Yes, the single channel units can be converted to 6 meters with a crystal
change and tuneup. Crystals are fundamental X3 for transmit and for the
receive is receive frequency -10.7 = fundamental. Standard 30 pf loading
on the crystal and 25 temp range seem to work ok with the units. Jan
crystals has supplied me with several crystals for conversion.

>will they have to take the new written exam as well ?

The exam format is changing, but the rules remain the same - an RAE
pass, no matter how old, gets you a B licence; added to the Morse test
gets you the A.

This applies to the old "essay" style RAE, the current two paper RAE,
and the impending single paper RAE.

: Jeff
: AB6MB

Jeff,
Omni antennas will work on the pacsats, but not very effectivly.
The slower (1200 baud) satellites are not used much, so with omni's
you will have much better luck with these satellites. The 9600 baud
pacsats are very crowded and because of the congestion on the uplinks,
omni's are not very effective. Having been on the pacsats for the
last few years, I have seen many discussions of omni antennas, and
the general consensus seems to be they just don't cut the mustard.
I use a pair of crossed KLM yagi's, and still need an amplifier to
use the 9600 baud sats because of the congestion in this part of
the world (mainly from Japan). If you can find a satellite noboy else
is using, omni's will work fine, i.e., a pass that approaches Guam
from the S.E. has noone in the footprint but Guam, and then 5 watts
works great. As I said, if you are going to use omnis, I would suggest
you try LUSAT(Lu-19) and PACSAT(Ao-16). Good luck.

Source record: 229117

I don,t think the code requirement should be dropped.
I do think some changes should be made.

I think that there should be codeless privileges on H.F
Give codeless access to the General portion of the bands with the same theory test a General class must pass now, or maybe a slightly more demanding test of correct radio operation on the H.F bands.

Make it 13 wpm, or even 10 wpm for access to the advanced portion.
Keep 20 wpm for access to Extra portion. Along with the same level of tests now used for Advanced and Extra.

There are many codeless Techs who do a very fine job operating a radio on the bands above 50Mhz. What would be the difference if they opperated a radio on a lower frequency?
I think it is very important to the survival of our hobby. There are many people who a very technically competent, but for various reasons would never bother to learn the code.

There a many reasons why code is still important to our hobbby, and will be for a long time to come, but I don't think we should deny access to H.F. because of it.

>Please email your thoughts,
>Tom Borthwick

Hi Tom
Your question is not real clear!
If your question is, can I replace the 8" drive on my, eg. posting machine, with a 3.5 for 5.25 the answer is no, not without changing the floppy drive controlling programs.

If you are asking, can the information from the 8" drive be saved on a 3.5 or 5.25 disk, the answer would more than likely be yes, if you have access to a computer that is both old enough to allow the 8" driver program and new enough to allow 5.25 driver programs to be run.

I was in a similar situation, fortunately, I could load all the data from the old 8" disks onto the new large harddrive and then switch out the 8" drive for a more modern one.

Source record: 229124

I AM a no-code tech who upgraded to Tech-Plus a couple of years ago. Now that 10 meters is pretty much dead and I am spending more time on the other DC bands and I am not only getting horney to get on phone, but I am having a load of fun on CW as well.

Here's the deal, the rules of the game simply state that I need to pass some sort of CW comprehension test to gain further access to the ham bands. There are loads of people on the HF phone bands who have successfully completed more difficult code tests than the ones currently in use at this time, and believe me, these guys aren't rocket scientists. So I figure if THEY can do it, I can do it. Does that make sense or am I off track?

Anyway, this is what I am doing. I work a little bit each week as I can by getting on the CW bands and working a few QSO's. I listen to code tapes like the Radio Shack stuff on the way to and from work and try to copy in my head. This worked for me at 5wpm. Then as much as possible, I do copy on paper when I'm at home. Maybe a half hour a day. NO MORE.

I ma convinced that if you do this you can easily be ready for the 13 wpm test in a month. I did 100% at 5wpm with 2 weeks of concentrated effort. I am no rocket scientist. But is DOES take some effort on my part.

The time you crybabies have spent rationalizing, wringing your hands in frustration, and working the internet crybaby net to death, you could have passed the 20 wpm requirement. GET OVER IT. Study. Apply yourself. Once you have successfully completed this goal, you'll be proud of youself. You'll feel good. You'll be telling others how EASY it was.

73, John-Dade City, Florida
You can find me at 3700 on Fri and Sat nites after 2000 EDT.

3917. Re: ARRL in FAVOR of no-code?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: Vincent Biancomano <v.biancomano@ieee.org>
Message-ID: <4ium0q$1fa@zeus.ieee.org>
Source record: 229125

In response to Ed Hare, who wrote:

>I got a bit confused, but I assume you mean the February 1996
>editorial. I reread the editorial and just did not see the same
>handwriting on the wall that you are envisioning. To quote Mr
>Sumner, "At its meeting January 19-20 ... the ARRL Board of
>Directors will be grappling with the parallel question of how to
>structure our domestic consideration of these issues." (I note
>that "these issues" covers a lot more ground than the Morse Code
>issue - Ed), "Membership input will be important in developing
>ARRL positions."

Various individuals interpret various passages differently. My belief is that the ARRL will pursue a no-code HF license. Let us wait and see how it falls out.

>That's fair enough by me, too. I have met a number of ARRL
>Directors in my tenure here; I have found that most of them spend
>a lot of time asking for Member input on the burning issues of the
>day. They are available by phone, by letter, by email and spend
>about half their weekends travelling to conventions and club
>meetings in their Divisions. I just don't construe that as
>"gathering overwhelming support for thier agenda." I construe
>that as "soliciting input for their agenda."

The quality of directors at ARRL follows the natural bell shaped curve, as with many processes. Some Directors are examplary, others less so. Some are intent on doing their job. Others are intent on building their empires. But when it comes to membership input, let us not forget how no-code was passed to begin with. If one reads the 9-7 vote that occurred back in 1990 or so to pass no-code (BoD meeting, Minute 41, I believe), one will see that amateurs never had a choice of whether no-code was coming. The proposal kept changing among the directors until there was a majority to pass. In simple language: amateurs never had a choice of whether a no-code VHF license was coming. What they were given was a possible choice of the CONDITIONS UNDER WHICH NO-CODE MIGHT BE ACCEPTABLE. That's a different issue entirely.

Ultimately, FCC overturned a part of that decision, which was initially intended for amateurs operating ABOVE 144 MHz. The passage of no-code was pushed through, in my opinion, in less than an honorable, democratic fashion. Not that no-code has been a disaster. But the main opposition came from amateurs concerned that a no-code HF license might be the result. "Don't worry," we were assured by ARRL officials. "International treaty prohibits

that." The story has changed now, hasn't it?

>>But it should ALSO be well noted that then-Director Mendelsohn
>>stated at Ham Expo in Long Island, New York on 10 November 1990:
>> "There's no need for amateur radio to remain a technical hobby,
>> simply because technicians and engineers can't even find jobs
>> today. You know, my father was a plumber, and he advised me to
>> do the same. And looking back on it, you know, he was absolutely
>> right."

>I don't know the context, so I can't completely interpret the
>overall intent. I do know that since 1990, I can't recall that he
>has managed to eliminate the technical part of Amateur Radio, or
>even tried. I also know that he is still works for a major network
>in NYC and has not changed his profession to plumber.

There's not much to interpret. Mr. Mendelsohn's comments were in
response to mine, in which I stated that if amateur radio did not
retain its identity as a technical hobby, we would be losing a lot
more than frequencies. The bottom line is that the future ARRL
President believes that "there's no need to remain a technical
hobby." Let's address THAT issue, and what it means for the future
of the Service.

>> Is ARRL going to push for an easing of Morse Code requirements?
>> You bet it is!

>Maybe, but maybe not. From all the indications I have, that will
>depend mostly on the input to the policy makers of the ARRL, our
>Division Directors. On this forum, I have often encouraged all
>hams to make their views kwown to their Directors.

From the main indication I have (e.g., the first VP believing there's
no need to keep amateur radio technical), it's clear to me ARRL will
pursue a no-code HF license. If they end up not doing so, it will only
be because the Amateur Service has fully awakened to what the issue of
no-code is about.

"The Morse Code issue has little to do with whether it gets through
when other modes do not, whether it is a useful mode or not, or
whether hams should 'pay their dues' as their predecessors.
The issue involves whether this Service should tolerate an easing
of requirments, both code AND theory, to save a hobby that, under
the circumstances, might not be worth saving. The issue is
deregulation, pure and simple, and it will be a durable beast."
--Former ARRL President Vic Clark, 1982

>>And it appears clear to me they will also support an easing of
>>theory requirements as well. Amateur radio has fooled with this
>>problem for too long a time. Now it finds itself in deep trouble.
>>Small wonder.

>It is not clear to me that we will support the easing of theory
>requirements as well. I can't see it in the February article, I
>can't see it in the many hours of staff time spent preparing
>technical publications, why, the ARRL Handbook has been increasing
>in technical content, not decreasing, over the years. I don't see
>it in the work that goes into QEX, our "high tech" magazine. And
>I won't read it into the fact that we are devoting a fair chunk of
>our resources toward the beginner; there are a LOT of beginners in
>Amateur Radio and we want to see them become active and integrated
>with us "old timers." They have our support, but IMHO, that is
>exactly the way it should be.

Without meaning to take an adversarial position, theory exams
were long ago eased, starting with the publishing of the EXACT
questions and answers for all ham exams. It wasn't always that
way, and is the prime reason ARRL threatened court action
against Dick Bash back about 1980. The fact that theory exams
aren't being restored now to their former status indicates that
the ARRL supports this deregulated format, i.e., it supports
continuing the eased requirement format.

>By the way, if I had my way, I would see a clear strenghtening of
>the theory requirements.

That's what I just said, Ed.

>If I had my way, if the requirements for Morse proficiency were
>to change, I would prefer to see them change slowly, to give the
>Service and those who believe in traditions time to adjust.

It all depends on what we have to adjust to. Vic Clark stated we
might have to adjust to deregulation. When it comes to Morse Code,
the issue, since 1980, has had absolutely nothing to do with Morse
Code as a communications mode. Few would deny that Morse Code
is a rudimentary form of communications. The point, however,
is that the Code serves in a far greater role for the amateur
service. As I've said previously, it fosters discipline in the
learning process for youth, encouraging them to stick with a
challenge. Those who have learned code also tend to build simple
equipment, learning by doing, which ultimately is the major reason
for amateur radio. The relationship between Morse Code and
learning is subtle, but it's there for many who have come up
over the years. There may be other ways to encourage discipline
in the learning process, and learning by doing, but until something
better comes along, there's no reason to eliminate the Morse Code
in the Amateur Service.

What are we experiencing instead? Extra Class Amateurs who never
learned Ohm's Law, for one. Hams that still believe that voltage,
a fundamental unit of electricity, is a unit of force or pressure.
There is a major problem here. The ARRL, recognizing it could no
longer justify its existence as a technical hobby, generated the
Spectrum Protection Act back in 1989 or so (at my urging, I may

add). But it failed because Congress recognized the first
acclamation in that document ("Ham radio is a technical hobby")
wasn't really true. We've got a lot of work ahead of us,
Ed. And further easing of entry requirements of any kind will not
provide a solution right now.

Regards,
Vince, WB2EZG

However, even if you don't want to change your callsign, you still need to
let the FCC know of your change of address. I think this is still done by
filling out a Form 610.

From: jgarver@ichips.intel.com
Message-ID: <4iuou7$1im@news.jf.intel.com>
Source record: 229127

>>We are trying to find ways to motivate hams to upgrade. We have already
>>lost one local club to the No-Tech Techs.

Regularly scheduled testing sessions at convenient times and locations are
a good start. Without prejudice. A ham license is a license to learn.
Nowadays when people come to me for advice on getting a license, I just point
to NM1D's Autoexam program. ftp://oak.oakland.edu/SimTel/msdos/hamradio/
I believe that you can learn from this type of study.

If I was a Godless Tech today, I can't think of one single reason to
upgrade. Almost all of my activities now fall into that area of 'priviledges'.

Incentive licensing was a failure and Novice Enhancement a failure.
The only thing that has worked as measured by an increasing ham population
is the No Code Tech. In my opinion they are the ONLY hope for ham
radio which is way behind the state of the art in almost every field now.

QST had a recent editorial or article titled:

'Morse 2000'

I just about chucked! Until then I hadn't even thought about anybody
trying to foster that grand old tradition into the 21st Century.

Yes, I used to teach code classes and helped many people get their license
or upgrade. And I did operate a code-only station for years back in the
60's. But this is the late 90's. And I'd like to hear or even see some more
young new voices and faces on the ham bands, last of the public airwaves.

3920. A Question

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: lisa.keeton@prostar.com
Message-ID: <0000121F00000F09@prostar.com>
Source record: 229128

I just saw this cruising across the Electronic Void:
snipped to save bandwidth>

BR>Used to be that if you were a ham, everyone knew you were an
BR>honorable hard-working
BR>person. Today a ham might be an idiot drunk who cusses all night on 75m SSB
BR>with impunity
BR>thanks to our toothless FCC and general societal collapse. What can be
BR>next?

Hmmmm... I'm a new Ham, so please excuse my naivette <sp?> when I
ask this, since my experiences have so far been good ones... It seems
to me that, if someone doesn't want to be a party to breaking the
law, they won't associate with those that do. Are you saying there
are *that* many Hams out there that will converse with a 'potty
mouth'? Are there that many Hams that are willing to condone this
obviously illegal practice by participating in it? If the FCC can't
or won't do anything about it, wouldn't it be fitting for *us* to
all isolate these lids by *completely* ignoring them and refusing
to communicate with them?

Or am I so old-fasioned in thinking we can work together to make a
difference that everyone will just laugh at me?

Maybe I picked the wrong hobby... <sigh>

3921. Re: FR-146 FM Receiver Kit

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: bb840@scn.org
Message-ID: <DooLv5.Hxr@scn.org>
Source record: 229129

In a previous article, bremer@orion.ee.stcloud.msus.edu (Dave Bremer) says:

>My partner and I are using the Ramsey FR-146 2-Meter FM receiver kit to
>receive data broadcast at a frequency of 155.445 MHz. The data is sent
>with a 6 second delay between each new message. We are having trouble
>squelching out the noise during the 6 second delay period. The squelch
>seems to either cut out nothing or it cuts out everything including the
>data being broadcast. If anyone has any information regarding this kit
>or where we could receive help, we would appreciate hearing about it.
>Please e-mail any comments or suggestions.
>
Try turning the volume all the way down and leaving the squelch wide open.

3922. Dealer E-Mail & WebPages

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: cestro@pinsight.com
Message-ID: <4iurb2$ga2@jolt.pagesat.net>
Source record: 229130

For those looking for and wanting E-Mail addresses of dealers
and manufacturers as well as links to dealer webpages, check
the definitive listings at:

DealerEmail http://www.pinsight.com/~cestro/pcdemail.html
DealerLinks http://www.pinsight.com/~cestro/pcdlinks.html

... a combined total of over 350 and growing, continually
updated. A feature of the K6PBT Dealer Directory found on
many PacketCluster(tm) nodes as SH/DEALER.

73, Chuck
cestro@pinsight.com

3923. Central New Jersey Hamfest This Weekend

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: "William M. Bickley KF2ON" <wbickle@ix.netcom.com>
Message-ID: <3152FB2B.7BF9@ix.netcom.com>
Source record: 229131

HAMFEST! - New Jersey (Trenton) - Delaware Valley Radio Association. Sunday, March 24th - rain or shine. Vendor setup 6:30am; public 7:30am to 2:00pm. Trenton State College Student Recreation Center - Route 31 approx. 1 mile south of I-95/Route 31 exit. Admission $5.00; Tailgaters $10.00 (includes space and admission); Inside Vendors $20.00 (includes space and admission). Free parking; refreshments; handicapped accessible. Talk-in 146.67 and 442.650. For info, call DVRA hotline at (609) 882-2240.

3924. Rohn RTP Series

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9603221836.AA01792@tix.timeplex.com>
Source record: 229132

In March 96 QST there's an ad for a new series of ROHN RTP self supporting towers. They are supposed to be actually designed for self support, unlike the 25 and 45 etc. which are not, but often installed that way. Does anyone have any experience with the RTP series? They are made in 40 to 190 ft. designs.

Code proficiency makes better operators. Propagation characteristics
demand that those be the stations with HF privelages.

>I think it is very important to the survival of our hobby. There are
>many people who a very technically competent, but for various reasons
>would never bother to learn the code.

Why should that be acceptable to the Amateur community? Many
professions have entrance requirements which on the surface seem
unrelated to the field. The problem in the case you cited isn't the
code, it's the individual's lack of motivation to accomplish his goal.

3927. 10m Repeater Switzerland HELP wanted

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-22 00:00:00 UTC
From: Markus Buehler <mbuehler@hitline.ch>
Message-ID: <3153740F.798A@hitline.ch>
Source record: 229135

Hello thank you for reading this message:
We, a small group of ham operators, will build a 10m repeater.
Both RX and TX are located up at about 2000 meters in the swiss
mountains.
A 10 watt beacon is ready to put up to the tx location. We are only
waiting for warmer weather conditions. It will operate on 29.660 mc.
What we are looking for:
Are there 10 m repeaters at such high locations in the united states
or else where ?
We are interested in what kind of antennas where used.
Also the lightning protection is a big problem.
Which kind of tx and rx constructions are the best for 10m
repeaters.
Any other tips are real welcome.
Thanks a lot.

It is substantially easier to bitch about the inequities the competitive world provides (spices it up, don't you know) than to actually get in the fray and compete. If you bitch enough, someone (with tears in his/her eyes) will "feel your pain" and concede the battle to you.

As G. Gordon says..."You 43% ... suckers."

--While at my local main library looking through old electronics and Ham magazines for projects, I noticed that this code/no-code argument has been going on for a long time.

In 1975, when the big CB craze was on, articles in Elementary Electronics and Popular Electronics were theorizing that the end of CW was just a few years away and that it would be dropped for all license requirements.

Even without the wide-spread use of PCs, code was being termed obsolete. Funny, it's still popular today and the code requirement is still here.

Maybe CW will survive this digital assault for a while yet.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 MARCH AND FORECAST FOR 23 MARCH - 25 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 21 Mar
Daily Proton Fluence >1 MeV: 6.8E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.4E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Mar 24 Mar 25 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Mar: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled

Estimated Indices : A K Observed A Index 21 Mar
Learmonth 13 3223 3333
Fredericksburg 18 29
Planetary 15 22

Observed Kp for 21 Mar: 4333 4444

2B. MAGNETIC FORECAST
Date Ap Conditions
23 Mar 12 quiet to unsettled, with possible active periods.
24 Mar 10 Quiet to unsettled
25 Mar 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
22 Mar Fair-normal Fair-normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 Mar Normal Fair-normal Fair
24 Mar Normal Normal Fair-normal
25 Mar Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 Mar -6

Observed Australian Regional MUFs:
Darwin: 15-30% depressed 03-09UT, then near predicted monthly values.
Townsville: 15-30% depressed 03-09UT, then near predicted monthly values.
Sydney: 15-30% depressed until 10UT, then near predicted monthly values.
Spread F was observed during local night.
Hobart: 15-30% depressed until 14UT, then near predicted monthly
values.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 Mar -5 about 5% below predicted monthly values
24 Mar 0 near predicted monthly values
25 Mar 0 near predicted monthly values

From: donrm@sr.hp.com
Message-ID: <4iv64l$55k@canyon.sr.hp.com>
Source record: 229142

While channel surfing the other night, I came across a report
on white supremacy groups using the internet. It mentioned that
some sign their e-mail and postings with 88, which in their par-
lance equates to "heil hitler" . Anyone else see this report
or know how this got started?

Geez, if some sweet young yl sends me 88 on 40 CW do I ask her
what she really means?

To all radio amateurs

SB QST ARL ARLB018
ARLB018 KF2PJ Eastern New York SM

Rob Leiden, KF2PJ, of Glenville, New York, has been appointed
section manager of Eastern New York to complete the unexpired term
of Paul Vydareny, WB2VUK. In January, Vydareny was elevated to
Hudson Division director when Steve Mendelsohn, WA2DHF, was elected
ARRL first vice president. A new Board of Directors policy prevents
anyone from simultaneously serving as SM and as either an officer,
director, or vice director.

Leiden is employed by Lockheed-Martin and holds a degree in physics
from Union College and an MBA from Rensselaer Polytechnic Institute.
He's a member of the Schenectady Amateur Radio Association Board of
Directors and a former Chairman of the Schenectady Museum Amateur
Radio Association. He will retain the existing section staff.

From Tad Cook, KT7H
Seattle, WA March 22, 1996
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de KT7H

Solar activity remained low, about the same level as the previous week. There was a rise in geomagnetic activity in the past few days, with K indices as high as five. Another rise in geomagnetic activity is expected around April 7 through 9 due to a recurring coronal hole.

Solar flux should remain flat with little variation over the next month. Currently at the Spring equinox we are experiencing some seasonal improvement in HF communication. Too bad the solar flux isn't higher. Spring of 1998 should be much improved.

Sunspot Numbers for March 7 through 13 were 17, 15, 15, 12, 11, 11 and 0, with a mean of 11.6. 10.7 cm flux was 70.8, 70.4, 71, 70.6, 70.6, 69.9 and 69.3, with a mean of 70.4.

The path projections for this week are from the west coast of the U.S. to Western Europe, Southern Africa, South America, South Pacific and Japan.

To Western Europe look for 80 meters to open from 0230 to 0630z, 40 meters from 0130 to 0800z and 30 meters around 2300 and 0700z. 20 meters looks good from 1500 to 2000z, and 17 meters around 1800z.

To Southern Africa expect 80 to open from 0230 to 0400, 40 from 0130 to 0430, 30 from 0030 to 0230 and 0430 to 0530, 20 from 2200 to 0000, and 17 from 1700 to 1930.

To South America check 80 from 0200 to 1000, 40 from 0130 to 1030, 30 from 0030 to 0800 and again from 1000 to 1130, 20 from 2130 to 0430, 17 from 1600 to 0300 and 15 from 1730 to 0100 and 12 meters from 2030 to 2200.

To South Pacific 80 should open from 0530 to 1430, 40 from 0430 to 1500, 30 from 0330 to 1430, 20 around 1700 to 2000 and 0100 to 0600, 17 from 1730 to 0430, 15 from 1800 to 0300, and 12 meters from 2030 to 0100. 10 meters could have some openings over the same period as 12 meters.

To Japan check 80 from 0900 to 1430, 40 from 0800 to 1530, 30 from 0630 to 1700 with a week period around 1230 to 1330, 20 from 2100 to 0500, 17 from 2130 to 0400 and 15 from 2230 to 0200.

Special Bulletin 8 ARLX008
From ARRL Headquarters
Newington CT March 22, 1996
To all radio amateurs

SB SPCL ARL ARLX008
ARLX008 Arrest made in murder of ham couple

Authorities in Louisiana have arrested an 18-year-old man in the brutal slayings of former ARRL Delta Director Floyd Teetson, W5MUG, and his wife Winnie, WN5YTR. Webster Parish, Louisiana, Sheriff's Department Investigator Gary Valentine said Kevin Coleman of Heflin, Louisiana, who used to do yard work for the couple, was arrested March 18 and charged with two counts of homicide. Coleman, a suspect from the day the bodies were found, confessed to the murders, Valentine said. Coleman already was behind bars at the Webster Jail in Minden when he was arrested, serving a sentence on an unrelated traffic charge.

According to Valentine, robbery was the apparent motive in the killings. Authorities recovered jewelry and valuables that had been taken from the Teetsons' home. They also recovered a knife and a length of pipe believed used in the killings. Valentine said Coleman struck while the couple was at home, apparently hoping the Teetsons would tell him where they kept other valuables and money. Coleman is being held without bond. The case is to be presented to a Webster Parish grand jury, which will decide whether to indict.

The couple's family had offered a 10,000 dollar(s) reward for information leading to the arrest and successful prosecution of the couple's killer. The Teetsons' bodies were found outside their home near Heflin, Louisiana, February 23. Authorities believe the couple died two days earlier.

Valentine said the Teetsons' fellow ham radio operators helped authorities by offering what they knew about the Teetsons' activities. He said Coleman's arrest was a relief for both the community and authorities.

Floyd served as ARRL Delta Division director in 1962 and '63. Prior to that, he was the SCM of Mississippi (1960-61). He was an Honor Roll DXer and active contester and had been a member of several multi-op contest teams operating from various Caribbean DX sites. The Teetsons were active ARRL members.

I'd like to buy a solid-state, QRP rig that supports CW and phone. I'm
open to almost all HF bands, but am fairly limited in my funds. If anyone has
one they might be willing to part with for less than $150, then I'd like to
hear from them. I'd also be interested in some suggestions for rigs/kits
that might be under $150, and any info on what I might be able to expect
out of them. Thanks in advance, and 73.

>>Tom Borthwick

I'm new to the HAM world but certainly in the "old" computer world
there used to be equipment by a firm called "Schafstall" (sp?). This
was typically owned by a service provider (and many should still have
them (especially in the back room) that would take the hard sectored
8" and transfer the data (transparently) to a smaller format.

Your problem does not come with the diskettes, it comes with the
programs that wrote the diskettes in the first place. Typically they
were pretty simple machines and the programs, in turn were pretty
simple. The code would be meaningless in the newer systems. I've never
known a PC to use 8" hard sectored diskettes so backward compatibility
is out. Many old minis had such a provision. There were few soft
sectored 8" simply because they didn't store as much as a hard
sectored diskette. IBM used them from time to time.

There were other diskette "convertors" available on the market in the
same time period. Check around in old yellow pages (1977-84?) for
organizations that advertised "media conversion". They will have the
equipment. Warning, it will be old and dirty and may require a major
clean-up before use. You may also be given the equipment since there
is no longer a market for it. Most companies should still have it. It
cost $29,000+ when new with minimal capability and were primarly used
to convert word processor diskettes from one format to another.

Hope this helps

Ron

3940. Definition of OHM - !@#$%%^^ -- HELP

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: nor@synapse.net
Message-ID: <4j0rn6$fch@piano.synapse.net>
Source record: 228998

HI:

My wife and I are studying for our beginner's ticket. In the Radio Amateurs of Canada (Fifth Edition) Study Guide for the Basic Qualification they define the OHM as follows:

"The ohm is defined as the resistance of a conductor which will allow exactly one ampere of current to flow in the conductor when exactly one volt of EMF is applied to the conductor."

Does this mean that if I push 1 ampere onto the conductor with the force of 1 volt on the wire the resistor will do nothing but if I push it with a force of 100 volts it will only allow 1 volt to pass?

This is on page 2-5 of the guide under "Resistance" and I can't figure this one out. I haven't started Ohms law yet, I'm trying to understand this one first.

Welcome, Lisa and you bring up a very good point. You must acknowledge that no matter how good something is there will always be the proverbial BAD APPLES...just look at congress!!!

For the most part, the baddies keep to them selves in several well publicized frequencies. The vast VAST
majority of amateurs ignore them. It's like a repeater..you can't keep everyone off, so just
ignore those that show poor judgement.

In otherwords, you can't live without em and you can't kill 'em

Enjoy the hobby, it's tons O fun

Looking for typical Radio Shack stories to add to this thread.

One of our local Radio Shack stores has had several good people who seemed to know what they were doing. But in typical Radio Shack fashion managed to let them go and hire persons who seem to know nothing about electronics. I guess at 4.75 per hour and 1 percent commission you can't knowledgeable persons.

Usually when I HAVE to buy at the Shack, I bypass the salesman by saying "I know what I'm looking for!" and strictly use them for a cashier!

WAKE UP TANDY! Pay your persons a couple of dollars more an hour and employees will stay!

Well, i'll throw my 2 cents in. I started as a no-code tech and am a tech+ now. I haven't had any reason to use cw other than it's fun for me, but I could see in the future it possibly being needed for the situation. Case in point, I think alot of people keep embracing the great new technologies and saying to hell with the old. When the Northridge EQ hit, emergency services had they're grand old cell phones for emergency communications. As little common sense that they had the power grid was knocked off line, no power to the cell sites means cell phones are worthless. They were looking for the hams in the community to come out and help and help they did. Those old foggies with their own generators, batteries and years of experience came to their rescue. Needless to say the local disaster teams have a different light to all the nerds they thought they didn't need. So don't just say something is not needed just because of technology. I for one am part of the emerging technologies industry who trained under some old FAHRTZ, let me tell you the new generation of thinkers make all the bone head mistakes that the old timers did because they don't want to listen and have discarded the history of their industries. Every wonder why things cost so much? Everybody trying to re-invent the wheel instead of growing upon it.

From: J_Towle@msn.com
Message-ID: <00001fef+00004213@msn.com>
Source record: 229009

Thanks to Brian for pointing to the archives. There are a lot of files there, There are also some Web sites with FAA rules and regulations.

The UCSD archives have lots of opinions, some even contain factual information. In summary, there seem to be basically two issues: The actual degree of interference from handhelds, and the regulations (FAR) that apply to radios and other electronic gadgets on aircraft.

From one hysterical pilot's perspective, running a handheld on an aircraft will cause it to crash. In fact, to make his point, anyone who apparently disagrees with him is (his words) "stupid." So much for rational discussion. At the other end are discussions of the actual potential for interference (very low if any) and the rules that group virtually all passenger owned/used electronic devices (computers, walkmans, etc) into the banned category, mainly to avoid having to deal with type acceptance issues.

Of more interest to GPS receiver owners, VOR and DME technology is likely to become only a backup system -- GPS is authorized for use on all aircraft, an announcement made recently by the FAA. It is far more reliable and accurate, and more flexible for navigation. It is doubtful that much of anything is going to interfere with GPS signals, given their operating frequencies.

> with that stuff and I'm trying to update an old peice of automation
> equipment. Any help would be apreciated.

There were very many 8" formats ranging from a multitude of hard-sectored systems with sector and revolution index holes both at the center and at the periphery to soft sectored single and double density and both single and double-sided formats. And after you have solved the recording method, the variety of data set and directory schemes will further stagger you.

If you get more specific specs on the medium, try calling the service companies in the classified ads in the back of Byte magazine for quotes on transfer services.

Good reasons to keep the content of posts civil are as follows...
1. Amateur Radio newsgroups end up in many Schools of all levels.
2. Your mothers house is uncensored and I'll bet you don't talk like that to her.
3. It is offensive.
4. Many Internet gateway sysops LIKE MYSELF have to spend an hour or more clearing that trash (on cross postings also!) before posting the news on packet.

P.S. To all others, If you don't like the language then don't use the "reply to" in you reader. It reposts his garbage in your titles which means all of the replys have to be deleted as well.

Thanks for using restraint.

3954. Re: World Class Foxhunt coming to California

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: tracker866@aol.com
Message-ID: <4j20d7$3pf@newsbf02.news.aol.com>
Source record: 229012

VHF/UHF CONFERENCE FOXHUNT INCLUDES TEAM COMPETITION

In a European/Asian foxhunt, every person competes for medals as an individual. There are also prizes for the best aggregate score of competitors from various districts and countries. Similarly, there will be team awards at the VHF/UHF Conference foxhunt in southern California on May 5. (See my previous message for the detailed hunt announcement.)

When you register at the Conference for the foxhunt, you may declare yourself to be a member of a team representing your club, city, family, etc. Each team may have a minimum of 3 and a maximum of 5 members. Each entrant may be on only one team. (Or he/she may choose to not be on any team.) If a club/group/city has more than five hunters, they must split them up into more than one team. For instance, if six Orange County RACES members want to team up, they could form "RACES Red Team" and "RACES Blue Team."

Remember, hunters are competing for cash prizes as a individuals. Therefore, team members may not help one another on the course in any way. Any observed collaboration will result in disqualification, as it is in the IARU foxhunting championships.

Age divisions apply only to individuals, not to teams. A team may include members in more than one age division.

Team awards will be determined by the best three scores of the team members. Just as in the individual competition, scoring is first by number of foxes found and second by time. For example, assume the results for two teams are as follows:

```
RED TEAM | BLUE TEAM
Member Foxes Time | Member Foxes Time
A 6 1:55:34 | X 6 1:35:54
B 5 1:58:04 | Y 5 1:57:14
C 3 1:15:45 | Z 6 1:51:50
D 2 1:59:03 |
E 1 0:55:33 |
```

The best three performances from each team are compared. Red team's three best hunters found 14 foxes in 309 minutes while Blue team found 17 foxes in 324 minutes. Blue team wins over Red because it found most foxes. If Red Team had also found 17 foxes in its 309 minutes total time, Red would have won for being faster.

So, hunters from RACES, San Gabriel Valley, Santa Barbara, Fullerton club, Downey Club, Catalina club and others, here's your challenge: How many teams will you be sending?

> KF6BTE

Hi Stephen,

My suggestion is to skip the dual band amp. You will be better off with a real dual band mobile radio. With a mobile radio your radio is always ready to go in the car (no hooking it up to external antenna and power). Your hand held is always ready to be taken in your coat pocket.

A handheld does not have the best immunity in the receiver. You will experience more intermod when using the handheld in your car on an external antenna.

Bill

3956. Repeater "Broadcasting"?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: mag4419@mail.alliance.net
Message-ID: <4j224j$8v6@allinux2.alliance.net>
Source record: 229014

Your input, please on the following situation: An amateur radio operator using a local 2 meter repeater calls for his friend, another Ham. The other operator doesn't answer, so the first guy transmits again by ID�ng then says "clear." Is this guy "broadcasting" according to FCC Part 97? If it is not broadcasting in the legal/technical sense, is the Ham following good operating practice? Please discuss thoroughly and provide examples and references - have fun!!

But no one group runs it, no one checks your class of license before they listen to your ideas. I am not a no code technician, but it is HIGH time we recognized that these are legitimate hams, no better or worse than any of us (especially when WE first started).

>transmissions???

Remember that the poor selectivity is in the receiver front end,
allowing the image signal into the receiver. This doesn't have
anything to do with IF selectivity. Now as to how an FM receiver
can demodulate AM, if the receiver uses a discriminator, it will
happily demodulate AM too unless the signal is strong enough to
have it's amplitude variations stripped off by the limiter stage.
If the receiver uses a ratio detector, it won't have a limiter
because a ratio detector is theoretically insensitive to AM
variations. But if the ratio detector isn't perfectly balanced,
it will still demodulate the AM signal too. So either of the
popular types of FM detector can demodulate AM under the right
conditions. One of those conditions is likely to exist in a
cheaply made FM receiver using a whip antenna.

That's true, conditioning the wetware to be a modem is just Pavlovian
conditioning. It takes no intelligence, just mindless drill. The less
you engage in rational thought, the easier it is.

>Anyway, this is what I am doing. I work a little bit each week as I can by

>test in a month. I did 100% at 5wpm with 2 weeks of concentrated effort. I
>am no rocket scientist. But is DOES take some effort on my part.

Get back to us in two more weeks when you've passed 1B.

>The time you crybabies have spent rationalizing, wringing your hands in
>frustration, and working the internet crybaby net to death, you could have
>passed the 20 wpm requirement. GET OVER IT. Study. Apply yourself. Once
>you have successfully completed this goal, you'll be proud of youself.
>You'll feel good. You'll be telling others how EASY it was.

Again, get back to us when you've passed 1B. Many of us have, though it
took much longer than a month, but not all of us feel proud of ourselves
for wasting so much effort on a mindless activity of dubious utility.
You *do* appear to be an ideal candidate to pass the Morse exams quickly
and easily. You demonstrate the mindlessness so essential to being an easy
subject for the conditioning (brainwashing) required. It's always easier
to scribble on a blank slate.

>
>Bill ko4ww

Unfortunately, there are *not* plenty of hams on those bands.
The two major amateur populations are the newcomers, parked
mainly on 2m and 70cm because that's all they know how to do
until they gain more experience, and the old hands who when
they aren't beeping on the low bands are on 2m railing against
the newcomers' lack of Morse expertise. There are very few
experienced amateurs populating the upper bands which are in
jeopardy of being taken by commercial interests.

The current propaganda, as fostered by the Incentive licensing
system, is that the highest aspiration of an amateur is to master
the most backward method of communication and migrate to the most
overused portions of the spectrum. This is not a system designed
to populate our upper spectrum.

We seem to think that it is the responsibility of the rankest
beginners to tackle the frontiers of amateur radio while the
experienced amateur aspires to use the most settled parts of
the spectrum via the most backward methods. That's completely
wrong headed. It is no wonder that our upper spectrum goes
begging for usage.

>watts in for $259 and has a built-in receive preamp as well. How will the
>HT and the amp compare to a dual-band mobile unit?

Not favorably. Think of the tangle of cables, the still poor audio
output, and the almost certainty of overload and intermod problems
with the HT plus preamp.

>The power may be comparable, and the amp also improves received signals,
>but how will the performance compare with a dual-band mobile? Does the RF
>Concepts dual-band amp have any band pass filters to reduce intermod?

No, there are no filters limiting intermod included, and the preamp will
only make it worse. Your HT is already too sensitive thanks to being designed
to work with a rubber dummy load.

>I do connect my HT to a Radio Shack Discone antenna at home and don't seem
>to have much of a problem with intermod. I know the discone isn't a high
>gain antenna, but it is definitely better than the rubber duckie!

Barely. :-) The main advantage is height, which is certainly not
inconsequential, but doesn't fully make up for the lack of gain.

>I like all of the features of my HT and I probably have to buy something
>like a Yaesu FT-8500 ($680) to get comparable features (alphanumerics are
>high on my priority list). I like the ICOM IC-2000H ($300), but it is only
>a 2M radio.

Ouch. Yes, if bells and whistles are more important than solid
communications capabilities, you're going to have to spend a ton
on a mobile rig. But if you're more interested in good communications
performance, there are alternatives which will work much better than
a HT and an amp, while not costing more than the combination of a
HT and an amp. The Yaesu FT-8500 is actually a pretty good ham rig,
despite the bells and whistles, but a Motorola Mitrek would be better,
and cost less than $100 (or a MIcor for $50, or a GE Mastr II for $75).

With the change, you could also buy a scanner if you just have to have
that capability.

>old age?

Well it takes at least 3 conspiring licensed amateurs (who may work
for a dealer) and a cooperative VEC to produce a fraudulent exam
session. There's a risk here, but I don't think it's a large one.
I suspect the risk is no larger than for club members to give exams
to other club members, which has been allowed all along.

Goldwater, ultraconservative? Perhaps in contrast to the Great Society of the 1960s, but certainly not today. He's downright middle of the road compared to today's ultraconservatives. It is always interesting to hear from one of amateur radio's most distinguished senior statesmen, especially one who was so far ahead of his time, if for no other reason than the historical perspective he can bring to bear.

>The fact that this Amateur Radio program exists is important and
>pertinent. But please do us a favor and write a "mini-review" of the

>735 can do ANY satellite work of any kind...appreciate this info!

Well sure the IC-735 can be used for satellite work. It works fine for mode A and for mode K. With a converter or transverter (it has transverter jacks, unlike many modern rigs) it works fine for mode B. You'd have to stack transverters for modes L and S, so that's probably not too realistic. The tuning steps are a bit coarse for the PSK LEO birds, but it'll do for that too.

A FT-736R is a better rig for most satellite work, except mode K, but the IC-735, with appropriate transverters, can serve well as half of a satellite station for most modes. Oh, and it's still a darn fine HF rig too.

No, you haven't needed to change your callsign upon moving. That rule
was changed nearly 20 years ago. You MAY do so, if you like.
Just check the "change callsign" box on form 610 - you do need to submit
that for a change of station location.

Source record: 229025

In article <4islv1asi1@mhade.production.compuserve.com> Peter Coffee AC6EN
<72631.113@CompuServe.COM> writes:
>With the majority of newly licensed hams receiving Technician Class
>tickets, I don't see how anyone can argue that non-hams as a class
>perceive hams as a class of key-tappers.

Largely because non-hams as a class don't know about the changes to
the Tech license, or because the Tech license has been portrayed as
a sort of sub-ham license by the general amateur community because
it doesn't require a Morse test. It is unfortunately too common for
Techs to be compared to CBers by certain old line amateurs, creating
hostility between the classes, solely because of the Morse testing
that remains for the "higher" class licenses. This attitude leaks
out to the general public.

Many non-hams are still surprised to learn that they could get an amateur
license without a Morse test. This is a failure of marketing. Many others,
having come into contact with old line amateurs, learn that members of the
Tech class are not perceived as "real" hams by many old line amateurs. But
by far the largest group of non-hams, those who aren't actively interested
in becoming amateurs, still carry the old stereotype of amateurs because
it's still true with regard to the large percentage of amateurs who are
not Techs.

External to the amateur community, we need to do a better job of marketing
amateur radio so that mistaken impressions can be corrected. I'd note that
newsstand sales of amateur magazines like QST can be a step in the right
direction. They can portray amateur radio as much more than "key tapping",
though they sometimes also serve to reinforce the old stereotypes with
frightening pictures of huge antennas and stories of old key tappers chasing
postal cards.

Internal to the amateur community, we still need to correct the vestiges
of prejudice against the non-coded amateur which tend to feed the old
stereotypes. Though that will likely take decades, because some of the
hard line opponents will have to die off. And it can be perpetuated to
a new generation if current Morse testing requirements for "higher" class
licenses aren't removed. Half measures are seldom effective in altering
perceptions. In fact they often highlight those perceptions by contrast.

While perceptions by the (much larger) non-ham class are important to
the ham class, due to the larger group's control of the political levers
which impact amateurs, this isn't the main reason for reforming the
amateur licensing structure further. The main reason for reform is that
current testing practice has become irrelevant and illegitimate to the
government functions of licensing. That may not yet be widely realized

by the power brokers, but it will be, and that fundamental irrelevancy and illegitimacy can cause real trouble down the road because it will tend to transfer to the amateur community itself in the minds of the power brokers, IE it will start to make amateurs themselves appear to be irrelevant and illegitimate. That in turn undermines our chartered purposes, and our reasons for existance as a chartered service.

As long as our highest classes are separated primarily by Morse exams, the perception will remain that Morse is our highest aspiration. That will continue to fuel the idea that amateurs are anachronisms.

>for the simple reason that nobody has the authority to give them that
>jurisdiction.

That's true. The FCC's jurisdiction stops at the border. But the FCC
can cut off the internet at the border if they choose. We've already
seen the German government insist that content be filtered at their
border, and the FCC could do the same for the US border. That would
have an enormous impact on the internet. Every posting and every piece
of Email and every file and every data stream would have to be vetted
by a gateway at the border before being allowed to cross. That would
pose an enormous logistical problem to the net, one large enough that
it could effectively kill the net as a worldwide entity for practical
purposes. Most internet traffic crosses the US border, sometimes more
than once, even if its ultimate destination is outside the US. Blockages
at the borders would have the same effect as blockages of the coronary
arteries, it could give the internet a heart attack from which it couldn't
recover.

The FCC requires gateway stations to vet traffic that they forward onto amateur radio. In other words, you are ultimately responsible for anything your gateway forwards onto amateur radio. Sounds like you've been failing to exercise that control. You're putting your license at risk by that failure, and depending on others to control their ravings for your convienence is a highly risky position to take.

It might be nice if that were not so, but that's the way it is.

>machine, with a 3.5 for 5.25 the answer is no, not without changing
>the floppy drive controlling programs.

Actually, you can. When the then new 3.5 inch drives first came out, I wired up a cable for one to an 8 inch controller. It worked fine. The reason it worked fine is that both drives use the same sort of signals, just on different pins, and because the newer drives have 80 tracks while the older drives only had 77. So the old controller only uses the first 77 tracks on the new drive. Not a problem. It views the little drive as just another 8 inch floppy. Of course the format and data written on the disks is in a format incompatible with other newer computers using 3.5 inch drives, but that isn't often important for this type of upgrade.

>If you are asking, can the information from the 8" drive be saved on a
>3.5 or 5.25 disk, the answer would more than likely be yes, if you
>have access to a computer that is both old enough to allow the 8"
>driver program and new enough to allow 5.25 driver programs to be run.
>
>I was in a similar situation, fortunately, I could load all the data
>from the old 8" disks onto the new large harddrive and then switch out
>the 8" drive for a more modern one.

Yeah, now moving data to a different format is a separate issue, and does require a controller that recognizes the difference in 3.5 inch and 8 inch formats. But you can copy files to a 3.5 inch drive from a 8 inch drive if the controller thinks the 3.5 inch drive is just another 8 inch drive. That keeps everything in the same format, and works just ducky.

3971. Restoring vintage kit

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: root@falstaf.demon.co.uk
Message-ID: <4j1k2m$75n@falstaf.demon.co.uk>
Source record: 229029

Dear All,
I am an SWL living in the UK. I am restoring some old RAF airborne sets, a T1154, R1155 combo to be precise. I've got one going but need some spares for the other 3.

Has anybody got, or know where I might find, the meters that go in these sets?. One is labeled MAG FEED and is a square (about 1.5 inch) meter in a bakelite case made by sangamo weston part no 10A/12140. It goes up to 300 with an actual FSD at 100mA. The second is labelled A.E.AMPS and is a thermocouple meter with an FSD of 3.5 AMPS. Same case and manufacturer. Part no 10A/12162. I need one of the MAG FEED and three of the A.E.AMPS.

Replies by EMail please as my connection to news is a bit flaky.

Cheers

Robin Birch robin@falstaf.demon.co.uk

Hi Lisa,

What happens on the newsgroups is often not indicative of the
Amateur community elsewhere, nor do articles posted here
necessarly present an accurate depiction of Amateur conduct.

Yes, there are a few idiots on the air and I share your
disappointment in that regard. However, they're a small minority and
their impact on the rest of us should not be taken out of context.

Enjoy the hobby and welcome to Amateur Radio. :)

73,
Jack WB3U

It will probably work OK. You will need some load on the 5 volt line or
the supply probably won't start up. I'd suggest an automobile taillight
bulb (like an 1157) that will draw a couple of amps at 5 volts.

I have a nice 15 volt switching supply I use sometimes on my HT, It
works fine. There will be some noise radiated from harmonics of the
switching transistors.

I think you will find that there a lot more hams licensed than 20 years ago.
I understand that in the last couple of years there has been a few more people getting licensed. I love CW but if we have to drop it in order to get more people interested in the greatest hobby in the world, so be it.
Maybe we should limit CW to the advanced and extra licenses?
P.S. The last figures I heard was the average age for a ham is 58. That is sad.

N7DTD Age 61

Source record: 229069

Greetings!

Thanks for all the feedback on using HamSticks in a dipole configuration. For better or worse, I'm up on 40M at <1.3:1 SWR!.

But now, a new problem: I've got a "late-model" PK-232MBX connected from Radio 1 to ACC 2 on a TS-440/AT with an AEA cable. I'm currently experiencing two... phenomena:

1. With R151 (resistor associated with the Radio 1 Jack on the '232) clipped, the best I can do is 25-30 W. Clipping the resistor is recommended by AEA specifically for '440 radios connected in the above fashion.

2. Apparently, when the '232 keys the '440 through the ACC 2 jack, if a PTT mic is connected, it's keyed, too.

Can/Will anyone help diagnose/explain what's going on? I can key up with the PPT mic and fully drive the transmitter at/near 100W, so I don't believe it's an overall output problem.

Thanks and 73 de KC4WEJ,
Derrick

3992. "Motivation" - Start by *NOT* denigrating

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: an142028@anon.penet.fi
Message-ID: <084323Z23031996@anon.penet.fi>
Source record: 229081

First, my apologies for having to use the anon server to post, but e-mailing through same seems to be the only way that currently works.....

And for the record, this is Paul, K4MSG, e-mail address pbock@melpar.esys.com.

Now, in requesting info on "motivating" new hams to upgrade, the original poster claimed that "we have already *LOST* (emphasis added) one club to No-code Techs....."

My question is simply, "How?" Did all the Tech+, Novice, General, Advanced and Extra Class members suddenly die? Or were they perhaps "members" who never came to meetings, never participated, never originated new projects, etc., etc., but sat around "bad-mouthing" those who, whether you agree with the procedures or not, simply obtained a license *IN ACCORDANCE WITH THE EXISTING REGULATIONS* and then *PROACTIVELY* began to pursue *THEIR* interests within the club because the club wasn't doing much else?

Our club has a number of No-code Techs (or whatever you wish to call them), many of whom are active in club projects and even hold club offices. We also have a number of Tech+, General, Advanced, and Extra Class ticket-holders who are likewise actively involved in club projects *AND* hold office. It isn't easy holding a club office and worrying about things like keeping long-term projects rolling (we're doing a balloon project), getting ready for Field Day, lining up interesting presentations for the next meeting, etc. I salute those who are willing to get in and do it, regardless of their license class. They are "real hams," every one of them.

So, I would simply say this: If you want the new hams to upgrade, then you have to *SHOW* them what's out there. We've run videos on DXing by the So. Cal. DX Assoc.; I've given a presentation on the history of the Vibroplex bug including a hands-on demo with an oscillator; other members have done presentations on antenna design, VHF propagation, HF DXing, packet station setup and operation, demos of old "BA" gear, etc. We've had a "HT clinic" with test equipment to "evaluate" (and even adjust) everyone's HT, and so on. All of these things help build interest in the various facets of Amateur Radio, and serve as "motivational" tools to encourage members to try new things (or even "old" things, like operating CW or using tube gear) and/or to upgrade (if necessary) so they *CAN* try them.

And, I submit that the local club is the best way to make
that happen. If your local club isn't doing those things, if
it's become nothing more than a coffee-and-doughnuts "Good Ol'
Boys" bull session, then sooner or later the younger members may,
in fact, "take it over" and make something happen that *THEY'RE*
interested in. And the older members have no one to blame but
themselves for letting it occur.....

And, BTW, I was "bad-mouthed" in the '50s when I had a
Conditional license, so I know what it feels like - and it is
NOT in the spirit of Amateur Radio.

End of editorial.

73,

Paul, K4MSG

[Yes, late - chalk it up to *heavy* packet congestion...]

VK2 membership drive

Divisional membership drive

In accordance with a resolution of Council, at its meeting held in Tamworth on the 10th February, 1996, a membership drive commenced at Wyong Field Day. Consisting of TWO stages: the first one was to be conducted at the Division's stand on the 25th February, 1996 for people who joined the WIA-NSW Division at the Field Day. The prize for this first stage consisted of a cash prize of $100.00 plus the refund of the FIRST year membership fee! THE SECOND STAGE was to commence on the same day and run up to the day of the 1996 Divisional AGM. The total prize for both parts of this promotion is not to exceed $100.00 cash and $500.00 in sponsored goods and refunds.

THE SECOND STAGE IS NOW UNDERWAY

PRIZE: The KING OF WORD PROCESSORS, THE LATEST RELEASE OF WORD-PERFECT FOR WINDOWS (VERSION 6.1) BRAND NEW IN A SEALED PACKAGE! -FULLY COMPATIBLE WITH WINDOWS 95-! Value $565.00.

WHO CAN ENTER: Any NEW MEMBER (All categories) who joined the WIA-NSW Division between the 25th February, 1996. (Wyong Field day) & 2nd April, 1996 (Divisional AGM Day).

DRAW: At the Annual General Meeting. The prize will be available for collection on the day.

THE WINNER: Will be announced in our Divisional Broadcast, on the Packet Network, and published in Amateur Radio Magazine.

WIA MEMBERSHIP NOMINATION FORMS: These are available from the Divisional Office or by contacting Cesar Miranda VK2TCM (Mebership Secretary) by any of the following means:

TELEPHONE (02) 831-8450 or
FAX (02) 621-1516

AFFILIATED CLUBS: Why not publicise this unique opportunity at your monthly meetings, and indeed in your Club News Letters. Who knows, you may be helping one of your members to win and at the same time assist your Division to grow!

PRIZE DONATED BY: Cesar Miranda VK2TCM (Divisional Councillor).

SUBMITTED BY THE DIVISIONAL ADVERTISING & PUBLICITY OFFICER

WIA VK2 examinations

Divisional news

The next examinations will be held on 24 March 1996 (Sunday).

Applications close Thursday 14 March 1996.

Eric Fossey
Divisional Secretary

Lyell's 90th birthday

Today, 10th March, Lyell Woolnough, VK2GW celebrated his 90th birthday. First licensed as a 17 year old schoolboy in 1923, whilst attending Shore and living in Killara, he passed his tests and took over his father's recently relinquished callsign.

The same year Lyell accompanied his father Walter on an expedition of six cars and two trucks to central Australia via Broken Hill. One of the trucks was equipped with wireless apparatus - Military spark set - and a Military operator. They made radio contact with Adelaide every night from Central Australia, thereby preceding the famous John Flynn by approximately two years.

Lyell studied Electrical and Mechanical Engineering at Sydney University and spent all his working years in power production.

In the early 50s he served as Vice-President of the W.I.A. NSW Division and for many years was a member of the Amateur Advisory Committee. In 1958 he won the 21st B.E.R.U. contest, being at the time a leading CW operator.

In the early days of experimentation he worked on many projects with Dave Gray VK2IJ, Norman Hurll VK4HH ex VK2IN and the late Don Lindsay VK2DY. Lyell and Don were particularly interested in crystal grinding.

Lyell moved to Queensland a few years ago and is presently visiting his daughter at Gordon where the celebration was held today.

If any of his Amateur Radio friends would like to ring, his phone number is (02) 498 1201.

VK2 WICEN news

WICEN News

Although the cut-off date for the Bungonia Cave Rescue exercise next weekend has officially closed, there are still vacancies for those who wish to partake, if you let Dave VK2KFU, the event commander, know as soon as possible after this broadcast (morning

or evening); the main requirement is 2m portable equipment, but feel free to bring anything else, including packet and HF etc. Dave can be contacted at home (after 8pm during the week) on (02) 489-1810 or at work on (02) 9957-4224; surely there must be a few more operators who would enjoy a weekend in the bush? Don't worry; you won't be required to go underground (unless you really want to), as radios tend to work better when on the surface, although there is now a definite possibility. Please remember that there is a fee of $40, to cover food and hire of the generator; this is half the usual rate. By now, Dave should have contacted all those who expressed an interest; if this is not the case then please contact him ASAP; briefing notes will be posted in the next day or so.

Next weekend is also the Red Cross Calling Doorknock Appeal, with David VK2UDT taking enquiries, although we have no further information.

Finally, next weekend (apart from the John Moyle Memorial Field Day and St. Patrick's Day) also sees various events out Orange way. Their appeal for operators for the Cowra district WICEN exercise, the NSW Long Course Championship Triathlon, on 17th March, is starting to bring results, but quite a few more people are needed. In all, about 22 operators are required, with mobile or portable 2m FM equipment. The events starts at Lake Wyangala from 6am on Sunday 17th, and operators will be stood down progressively from 11:30. Personnel are asked to contact the Central West co-ordinator, Robert VK2ZRJ, on (063) 62-6068, or the event co-ordinator, Peter VK2ETK, on (063) 61-3439, or packet radio at as VK2ETK @ VK2TLH.

Other events this month include the RCO's Conference at Hornsby RSL Club on 31st March (the closing date for which is the 22nd March); and the end of the financial year, with subscriptions due, also on 31st March.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

The Royal Australian Navy has produced a system to map Australia's coastline, quickly an accurately. After two hundred years, only half our coastline has been charted. The new systm, called LADS (for Laser Airborne Depth Sounder) has already mapped dangerous shipping routes of the Victorian coast, around the Cape York Peninsula, and is now being used to chart the Great Barrier Reef.

Mounted in a Fokker F27-500 aircraft, LADS can map strips of ocean floor 240 metres wide, to any depths. By comparison, ship-mounted sonar measures strips about 20 metre wide with limited depths. LADS can also perform the job 14 times faster than the ship.

Telstra has been taking an interest in the oceans as well; it has joined forces with the Defence Science and Technology Organisation's High Frequency Division, to a Coastal Ocean Sensing Radar, called COSRAD2. The new system measures ocean surface currents, wav height and period, wind direction, and tidal ellipses, and performs particle and oil slick tracking into the bargain.

"Surface Wave Radar" technology makes use of ocean conductivity to propagate HF signals, and measures reflections. The system is usable over an area of about 50km square.

Scientists in Perth have developed the world's most accurate clock, which has a resolution of one femtosecond (10-15 seconds), or a thousand times more accurate than the clocks used to define Greenwich Mean Time.

Microwaves are introduced to a cylinder of ultra-pure sapphire about the size of a human fist; the reflected microwaves are detected using a detector tuned to a frequency of 11 GHz, giving an accuracy of better than one femtosecond.

The only problem with the clock is that it is only stable for five minutes; nevertheless, if you want one it will cost you $250,000.

--Thanks to the Sydney Morning Herald and the Australian

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Oxley Region

The OXLEY REGION AMATEUR RADIO CLUB will be holding their annual FIELD DAY this year on SUNDAY JUNE 9 at the new Scout Hall, Buller Street, beside the harbour at PORT MACQUARIE.

There will be the usual Fox Hunts on 7 mHz and 144 mHz and a large disposals area so you can bring your "don't wants" or your cheque book !

More on this Field Day will be broadcast nearer the date. The main thing at the moment is for you to reach for your calendar and circle Sunday June 9 Port Macquarie. A must. More information can be obtained from the Secretary VK2AYD on 065 85 2647.

-David Pilley VK2AYD, Secretary ORARC Inc

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

The March meeting of the Waverley Society will occur on Wednesday the 20th, and all members and anyone interested in amateur radio are invited to come along. The speaker for the evening will be Michael Richter, VK2BMM, who will explain the intricacies of GPS, the satellite based Global Position System.

The meeting, as usual, will be held at our clubhouse in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. where a number of members gather for pre-meeting refreshments. Starting time is 7:30 p.m., with doors opening at 7 p.m.

Remember that the first Saturday afternoon every month is project time where you can get assistance from other members with projects, rigs that need fixing and so on. The next such afternoon will be on

Easter Saturday, 6th of April, so come along and get involved in some practical work or just for a rag chew.

-- Simon Buxton - VK2EII - Publicity Officer

Club news: Illawarra

THE ILLAWARRA AMATEUR RADIO SOCIETY ADVISES ALL MEMBERS AND THERE FRIENDS THAT THE GUEST SPEAKER AT THERE NEXT MEETING WILL BE TALKING ABOUT 'M' 'D' 'SOCRATES'. WHATS M D S I HEAR YOU ASK WELL IT'S NOT "MARCONI DIDN'T (LIKE) SPAGHETTI" OR EVEN "MY DINNERS STEAK" SO TO FIND OUT WHAT IT IS COME ALONG AT 7:30 PM ON MARCH 12TH TO THE S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG. AFTER THE TALK THERE WILL BE TEA AND COFFEE. DON'T FORGET THE SHOW US YOUR SHACK VIDEO. HOPE TO SEE YOU ALL THERE.

--BRIAN VK2UBF

Club news: SPARC

SPARC meeting

The next meeting of SPARC will be held on Monday the 18 of March 1996 at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milsons Point, in the arch below the railway line (The State Emergency Services headquarters for North Sydney). This is immediately to the North of the roundabout at the intersection of Lavender Street, Alfred Street and Middlemiss Street, Milsons Point.

For those interested, some of is will be meeting beforehand for a meal at the Kirribilli Services Club in Cliff Street, Milsons Point, only about three minutes away from the SES headquarters and commencing at the usual time of 6.30 pm.

The speaker for this meeting will be Mr. Colin Mackinnon.

Colin Mackinnon apart from having the call sign, VK2DYM, also is well known to the ranks of the Historic Radio Society of Australasia as an enthusiastic collector of Australian Military equipment and as a writer on historical subjects. He has had a number of articles published in the Society Magazine, Radio Waves and in other periodicals.

Colin has agreed to talk to the next meeting of SPARC on the subject of the development of Military Radio in Australia from the earliest days. This talk will be illustrated with a number of slides of various equipment and in addition, Colin has said that he will bring along some of his collection for members to inspect.

This appears to be likely to be a very interesting discussion not only for the historically inclined but also for Radio Amateurs and communicators in general. If you are interested in radio communications, you should find what Colin has to say well worth

the effort of coming to Milsons Point.

As usual refreshments will be available and all are welcome.

Peter R. Jensen
President

Club news: Orange

The appeal from Orange for operators in the WICEN exercise at Wyangala Dam and Woodstock on Sunday next, 17 March has been successful. Many thanks to those who have volunteered.

However, There are still positions available for anyone who has 2 metre FM mobile or hand-held equipment and the time to come along and enjoy the day. You need to be at Woodstock by 6am but you will be able to leave by about 1.30pm. Give the event co-ordinator Peter Carter VK2ETK a call if interested, on phone 063-61-3439 or via packet to VK2ETK @ VK2TLH.

From Peter VK2ETK President, Orange and District Amateur Radio Club and the WICEN Exercise Co-Ordinator.

Club news: VHF DX Group

VHF DX Group

The next meeting of the VHF DX Group is scheduled for Tuesday March 19, 1996 at Amateur Radio House, Wigram Street, Parramatta.

The lecture topic for the meeting will be on the six metre band.

The 1296 transverter kits ordered late last year have now arrived and will be available for distribution at the meeting.

The VHF DX Group display at the recent Central Coast Field Day was well received. People seemed particularly interested in the VK2ZAB map showing two metre and 70 centimetre DX worked from Sydney and the VK2BA collection of QSL cards confirming worked all continents on 50MHz.

Don't forget the Tuesday activity nights on 144 MHz and the Group's Sunday morning net on 146.5 MHz FM starting at 11.00 am.

[I wasn't here then - don't ask *me* why there's no Divisional news]

VK2 WICEN News

WICEN News

This week's news will be brief, as the Publicity Officer is taking part in the Bungonia Cave Rescue exercise this weekend.

Events this month include the RCO's Conference at Hornsby RSL Club on 31st March (the closing date for which is the 22nd March); and the end of the financial year, with subscriptions due, also on 31st March.

Next month sees the Mid North Coast Horse Enduro on the weekend of 6-7th April, and the RTA Big Bike Ride, from Albury to Bathurst, from the 20th to the 28th April.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/".

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

The Federal Office of Road Safety has warned against the use of digital mobile phones in cars, where an external aerial has not been fitted. An effect, termed the Faraday Cage Syndrome, may be familiar to many Radio Amateurs: RF energy radiating from the antenna of a hand-held transceiver, or from an improperly-shielded mobile rig can interfere with the

car's electronics.

As cars become more "electronic" and less mechanical, such problems are likely to increase, and there are cases on record, where RF digital handheld phones have caused cars' centralised locking to engage, engine control computers to act up, antilock braking and electronic suspension systems to behave erratically, and so on. There are also concerns that stray RF may cause airbags to trigger unexpectedly. An Australian design rule is to be introduced, to ensure such interference resulting from the "Faraday Cage Syndrome", does not occur.

Where Amateur gear is concerned, especially with high power mobile rigs, it's important that an external aerial be installed, with special attention given to shielding and earthing.

Nokia has introduced the ideal mobile phone for the most hardened yuppie or Internet addict. The Nokia 9000 Communicator is fitted with a modified Intel 80386 microprocessor and software to let you access the Internet anywhere you can use a conventional mobile phone. Featuring a fold-out miniature keyboard, the phone supports data communications at speeds up to 9600 bits per second, for email and World Wide Web access. For those of you who would rather not spend the money on a new HF rig, the Nokia 9000 Communicator will be available in July, at a cost of around $2,000.

The Australian Defence Force's Jindalee over-the-horizon radar (OTHR) system, which is designed to give us advance warning of attack from the north, has been delayed 2 years because of software problems. Telstra, which has been developing leading edge digital signal processing software for the Jindalee Operational Radar Network, has announced that its software will not be complete by June 1997 as originally expected. While the system will not be completed on time, a partially functional radar network is expected to be in place by the end of 1998.

When Jindalee is operational, OTHR stations at Longreach in Queensland, and Laverton in Western Australia will provide advance warning of enemy movements up to 3,000 km away over the entire Australian north coast.

Finally, you can all start breathing again: your shacks are safe. Chinese spy satellite FSW1 re-entered the Earth's atmosphere on Tuesday, ending its life somewhere in the South Atlantic, taking its cargo of secret photographs to a watery grave...

--Thanks to the Sydney Morning Herald and the Australian

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: St George

From the St George Amateur Radio Society

Society members met for the last time on Wednesday evening, the 6th of this month, at the 1st Allawah Scout Hall at South Hurstville. This venue has served them faithfully for the last fifteen years, and there was a degree of sadness evident in the fact that, due to the decline of the Scout movement in the district, the Scout Association had no option but to hand the premises over to Kogarah Council who plan to use it for another purpose - a Meal on Wheels preparation and distribution point, we understand.

The next monthly meeting of the Society will be held on Wednesday evening, the third of April, at 7.30 pm, in the new venue approved by the meeting - and that is in the hall under the main floor of Grandviews Bowling Club, located at 821 Forest Road Peakhurst. Grandviews is located next to the Catholic church which is on the corner of Forest Road and Isaac Street, and overlooks Gannon Park playing fields. Off-street parking at the rear of the club is available by an entry on the left-hand side of the club, and exiting by a lane on the other side. Entry to the hall, without coming in the main entrance, is directly off the carpark.

Guest speaker for the evening will be John Innes VK2AUI. John, who is an antenna design engineer, will be presenting the meeting with an

interesting talk on various aspect of antenna use and design, a subject which should be of interest to all members.

Visitors are always welcome to the club meetings - coffee, tea and biscuits are provided, and the members look forward to meeting those interested in attending.

Alan VK2XF Publicity Officer

Club news: Waverley

From the Waverley Amateur Radio Society

The next meeting of the Waverley Society will be this coming Wednesday the 20th of March. The speaker for the evening will be Michael Lichter VK2BMM who will explain the working of GPS, the satellite-based global positioning system.

The meeting as usual will be held at our clubhouse in Vickery Avenue Rose Bay, off New South Head Road, next door to Rose Bay RSL. Starting time is 7.30 pm, with doors opening at 7 pm. Anyone interested is welcome to attend.

Remember that the first Saturday afternoon every month is project time where you can get assistance from other members with projects, rigs that need fixing and so on. The next such afternoon will be on Easter Saturday, 6th of April, so come along about 1.30 pm and get involved in some practical work or an informal get together.

-- Simon Buxton - VK2EII - Publicity Officer

Club news: Manly-Warringah

The Manly-Warringah Radio Society's lecture night is this Wednesday, where it will be the "dawning of the Age of Aquariums" (ahem!). Marque Crozman VK2ZLZ will be speaking on one his "pet" topics, Fish and Aquariums.

The club would also like to find a new home for its Kenwood TS930 HF transceiver, so if the fish don't reel you in, perhaps the rig will! The Manly-Warringah Radio Society meets every Wednesday night at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. Doors open at 7:30pm for an 8:00pm start, and visitors are always welcome. If you need directions, just call in on the club's 2m repeater on 146.875 MHz.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 900 17TH MARCH 1996

RTTYS MOST WANTED COUNTRIES

AS THE RESULT OF A SURVEY RUN BY THE DIGITAL JOURNAL, WE HAVE
A LIST OF THE MOST WANTED COUNTRIES ON RADIOTELETYPE. tHE
FIRST TEN ARE:
NORTH KOREA
EQUAL LIBYA, YEMEN, HEARD IS
KERMADEC IS
EQUAL BHUTAN, ST PETER AND ST PAUL ROCKS,
KERGUELEN IS
EQUAL MACQUARIE IS, ANDOMAN AND NICOBAR,
EQUAL CROZET IS, TRINDADE AND MARTIM VAZ
PAGALU IS
CENTRAL KIRIBATI,
AUCKLAND AND CAMPBELL IS.

IN THE ARTICLE ATTACHED TO THE TABLE SOME OF THESE RARE DX
ARE LISTED IN A SLIGHTLY DIFFERENT ORDER TO THE TABLE,
PROBABLY A SLIGHTLY DIFFERENT METHOD, BUT IT MATTERS LITTLE.
THE TOP COUNTRY, P5 (NORTH KOREA), IS NEEDED BY EVERYBODY WHO
REPLIED TO THE SURVEY. THIS INCLUDES LUCIANO I5FLN.

THERE ARE NOW 329 ACTIVE DXCC COUNTRIES IN THE RTTY LISTINGS.
THAT WILL GIVE YOU SOMETHING TO AIM AT.

HAPPY HUNTING

TESLA - AMERICAS FORGOTTEN SCIENTIST

iN THE JANUARY 1996 ISSSUE OF 73 AMATEUR RADIO TODAY IS AN
ARTICLE ON THE EFFORTS OF JOHN W8AHB TO OBTAIN A PLACE IN A
MUSEUM FOR A BUST OF NIKOLA TESLA IN HONOUR OF THIS GREAT
SCIENTIST. jOHN IS A TEACHER AND HAD FOR YEARS BEEN TEACHING
HIS STUDENTS ABOUT TESLA, FIRSTLY AS A COMPOSITION SUBJECT AND
LATER FOR HIS SCIENTIFIC ACHIEVEMENTS.

WHEN AN EX-STUDENT OFFERRED TO HAVE HER SCULPTOR FATHER MAKE A
BUST OF TESLA FREE, FOR PLACEMENT IN A MUSEUM, JOHN JUMPED AT
THE IDEA.HE WROTE THE INSCRIPTION FOR THE BUST AND SET ABOUT

OBTAINING DONATIONS FOR CASTING THE COMPLETED CLAY FIGURE. HE HAD NO PROBLEMS OBTAINING DONATIONS FORM BOTH PRIVATE AND CORPORATE SOURCES.

IMAGINE HIS SURPRISE WHEN HE OFFERRED THE BUST FIRSTLY TO THE HENRY FORD MUSEUM, THEN TO THE SMITHSONIAN, TO DISCOBVER IT WAS NOT WANTED. BOTH THESE PRESTIGIOUS INSTITUTIONS WERE FIXATED ON EDISON, WITH NO CREDIT FOR THE WORK TESLA HAD DONE ... IN FACT, THE SMITHSONIAN WAS DISPLAYING EDISONS BUST NEXT TO THE FIRST TESLA AC MOTOR/GENERATOR IN SUCH A WAY AS TO GIVE CREDIT TO EDISON. EDISON WAS EVEN GIVEN CREDIT FOR THE NIAGARA FALLS POWER PROJECT WHICH USED AC ... EDISON FOUGHT THE RISE OF AC AND ONLY WANTED DC TO TO BE USED.

JOHN IS NOW ASKING PEOPLE TO PROTEST TO THE SMITHSONIAN TO GET RIGHTFUL ACKNOWLEDGEMENT OF THE WORK OF TESLA BESIDE THAT OF EDISON. THIS IS AN ON-GOING SAGA AND IT WILL BE INTERESTING TO SEE IF HE, WITH SUPPORT, CAN GET THE SMITHSONIAN TO CHANGE ITS TUNE.

BY THE WAY, THE NAME OF THE HENRY FORD MUSEUM IN DEARBORN WAS THE EDISON INSTITUTE ...

Notes of Interest:

CROZET, FT5W. Jack, FT5FW is a technician at the Observatoire de Magnetisme et Sismologie on Crozet, he will be there for a year and also active SSB and SSTV.

MARION IS., ZS8. Chris, ZS5IR/ZS6RI will be active from the first days of May 1996 until he leave the island in June or July 1997. He will not use ZS8MI callsign,but a special unique callsign ZS8IR. Chris report that will be QRV on all bands(160 to 6 meters) on SSB, CW and RTTY. The station will consist of an Icom IC-735, Yaesu FL-2100Z Amplifier, AEA PK-232 MBX multimode data controller. He will be using mostly

wire antennas (rhombics & V beams). All QSL go to via his manager, Chris R Burger ZS6EZ (ex ZS6BCR).

SRI LANKA, 4S. ?Mario, HB9BRM will be operating from March 9 to 17 April and say that mode of operation include Amtor and Pactor. The call will be 4S7BRG and qsl go to his home call.

GUANTANAMO BAY, KG4. Look for Bill, KQ4GC, from March 8 to 14 on ssb and rtty on all bands. He should be use KG4QC, qsl via homecall with sase.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at
URL http://www.clinet.fi/(TILDE)jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at @ W5KSI.#NOLA.LA.USA.NA.

Gl de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

DX Bulletin 14 ARLD014

This week's bulletin was made possible with info provided by Mauro, I1JQJ, Johnny, LA5IIA, Morten, LA9GY, Uwe, DL9GOA, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

TONGA, A3. Morten, LA9GY, will operate from Tonga March 16 to April 4, including action in the CQ WW WPX contest. He hopes to secure use of the call A35GY. Morten prefers CW but will operate some SSB. QSL via LA9GY.

VIETNAM, 3W. Nikolay, UA0FM, continues to keep 3W5FM on the air daily from 1400z on 7005 kHz CW and from 1530z on 7045 kHz SSB. These skeds are with Sergey, UA0WY, running the list. QSL direct to PO Box 66, Vladimir, 600011, Russia.

WESTERN SAHARA. EA3NY plans to operate in the CQWW SSB WPX contest March 30 and 31 on 80 through 10 meters, probably as S01EA.

SOMALIA, T5. I4LCK and IK4SDY will be active from Majo Island, IOTA AF-052, March 27 to April 3 on 160 through 10 meters with 500 watts to vertical and dipole antennas.

FALKLAND ISLANDS, VP8. DA4RG, will sign VP8BPZ from mid-May to mid-September. He plans to operate SSB only, not nets or lists. QSL via GW8VHI or DA4RG.

MYANMAR, XZ. According to Wayne, KF7AY, things still look very promising for the April XZ1N DXpedition, though some regulatory matters between the Myanmar military and related

ministries need to be ironed out. Word from Yangon is
encouraging, however.

COMING EVENTS

MARCH 16TH-17TH BARTG SPRING RTTY

Yaesu FT207R 2 mtr HT. 2.5 watts high. Includes deskcharger/power supply, new battery, hand mike, car power adapter, wall charger. Will throw in 1/2 wave duck antennas and mag-mount car antenna. Asking $125. Call Gary at 912-882-7525 or leave email to garyb@gnatnet.net.

3998. HT Dual-Band Amp vs. Dual-Band Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: lui@netcom.com
Message-ID: <lui-2103962251280001@192.0.2.1>
Source record: 229087
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I've enjoyed using my Icom IC-Z1A dual-band HT and have been looking at dual-band amplifiers. I seem to need a bit more power when using the HT in my car, using a MFJ-1724B magmount antenna. My HT puts out 5W on 2M and 7W on 70cm when connected to 13.5V.

I could buy a high gain antenna, but I really don't want a 5 foot antenna on my car!

RF Concepts has a 2M/70cm amp (Model 2/70G) which outputs 30W/20W for 5 watts in for $259 and has a built-in receive preamp as well. How will the HT and the amp compare to a dual-band mobile unit?

The power may be comparable, and the amp also improves received signals, but how will the performance compare with a dual-band mobile? Does the RF Concepts dual-band amp have any band pass filters to reduce intermod?

I do connect my HT to a Radio Shack Discone antenna at home and don't seem to have much of a problem with intermod. I know the discone isn't a high gain antenna, but it is definitely better than the rubber duckie!

I like all of the features of my HT and I probably have to buy something like a Yaesu FT-8500 ($680) to get comparable features (alphanumerics are high on my priority list). I like the ICOM IC-2000H ($300), but it is only a 2M radio.

4000. Chgo area radio classes offered - Novice thru Extra

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-23 00:00:00 UTC
From: dreambig@ix.netcom.com
Message-ID: <4j0ued$63n@reader2.ix.netcom.com>
Source record: 229089

My idea is simply this -- ham radio classes see a lot of drop-outs because the classes go on too darn long! People have better things to do with their lives than attend 6 to 12 weeks of ham radio classes.

I am looking for students and sponsors for one-day license workshops. If you know anyone interested in getting their Novice ticket or upgrading to Technician, General, Advanced or Extra, please have them call me. I will teach a one-day theory seminar & workshop for any license level -- Novice through Extra. I've taught ham radio to about 300 people during the past 10 years from Novice through Extra and always enjoy the excitement in the faces in front of me.

What do I need to make this happen? I am looking for a club that wants to sponsor the workshops.

The sponsoring club will
1) provide a suitable room for an all-day seminar and
2) get students lined up for the classes.

What will the club get in return for their effort? Classes are a great source of new members. Classes can also be an income producer if the club wants to charge for them. Keep the money as a donation to the club or let that money pay for a one-year club membership for the new ham. My services are free to the club and the students.

Please call me if....
* Your club or repeater group is interested in sponsoring a workshop
* You or someone you know is interested in attending a one-day Upgrade Workshop
* You know someone interested in a one-day Novice Workshop

well, we've had digital telephones at work for something like 10 years (about to replace that system with a new one that does even more stuff). and the existing telephone network turns digital ASAP after it leaves your home.

i think the telcos already have been taking advantage of digital designs. they just couldn't afford to change over the user installed plant.

it was a public action by the FCC, open for comments for all.

> changing among the directors until there was a majority to pass. In
> simple language: amateurs never had a choice of whether a no-code
> VHF license was coming. What they were given was a possible choice
> of the CONDITIONS UNDER WHICH NO-CODE MIGHT BE ACCEPTABLE. That's
> a different issue entirely.

since the code free license was started as a grass roots movement rather than
a "top down" league decision, it was becoming clear the FCC was going to wait
to hear from the ARRL. the ARRL proposal was crippled and quite properly
not just taken verbatim as a rule making.

> Ultimately, FCC overturned a part of that decision, which was

vince, you _do_ understand that the FCC runs the amateur radio rulemaking
process...that the League is only a contributor to it?

> initially intended for amateurs operating ABOVE 144 MHz. The
> passage of no-code was pushed through, in my opinion, in less
> than an honorable, democratic fashion. Not that no-code has been

yeah, all those letters to the FCC and the other mags didn't count because
the decision wasn't made at the league first, huh? lemme check here again,
they have something like 175,000 members and there's 750,000 plus hams?
the league needs to get serious about recruiting...

> that." The story has changed now, hasn't it?

well, if the international rules change, then yes, our domestic rules should change.

> "The Morse Code issue has little to do with whether it gets through
> when other modes do not, whether it is a useful mode or not, or
> whether hams should 'pay their dues' as their predecessors.

> against Dick Bash back about 1980. The fact that theory exams
> aren't being restored now to their former status indicates that
> the ARRL supports this deregulated format, i.e., it supports
> continuing the eased requirement format.

the ARRL doesn't get to vote on this one. rules say they have to be public, they're public. and we had 50% fail rates at the last test session...explain to me about how publishing all the questions and answers makes for a no-fail scenario at the exams...

> What are we experiencing instead? Extra Class Amateurs who never
> learned Ohm's Law, for one. Hams that still believe that voltage,
> a fundamental unit of electricity, is a unit of force or pressure.

even in college, they use the hydraulic analogy for freshmen EEs (what's funny is that the MEs get an electrical analogy in their hydro classes..) and it's called Electromotive Force and it's measured in Volts...no voltage differential, no current flow...humm..sure seems to be a lot of "water" based terms in use here...)

Sir; I have a series of catalogues that I want to sell. the list is as
follows:
HeathKit test Equipment Catalogue 1954
HeathKit Cat. 800/84 Fall-Winter 1968
HeathKit Cat 800/83 Summer 1968
HeathKit Cat 810/72 1969
HeathKit Cat 800/91 1969
HeathKit Cat 810/69 1969
HeathKit Cat 810/70R 1970
HeathKit Cat 810/71 1970
HeathKit Cat 800/11 1971
HeathKit Cat 800/40 1972
HeathKit Cat 800/28 1972
HeathKit Cat 800/70 1973
HeathKit Cat 810/74D 1974
HeathKit Cat 800/80D 1974
HeathKit Cat 810/75 1975
HeathKit Cat 804 1975
HeathKit Cat 802 1975
HeathKit Cat 803 1975
HeathKit Cat 809 1976
Electronics Dist Inc Annual Edition 1973
Allied Electronics Cat 280 1969
Lafayetter Radio Electronics Cat 660 1966
Radio Shack Cat 124 1968
Allied Electronics Cat 710 1971
Allied Electronics 1974 Engineering Manual & Purchasing Guite No 710
1974
I have ARRL Handbooks that are quite old if your interested.
All of the above are in excelent condition.

I have a 8homs kenwood sp-23 sternal speaker. It sounds fine , but for my taste
I would like it to be a little less basy. So any of you guys know what capacitor I can use. I don't want a big change only increase the high frequency response a little bit. Thanks in advance.

>imagination to explore post hoc. What we don't want to do is turn off
>potential members of the group via irrelevant hazing or by fostering
>a perception of the service as backward.

Translation: Treat degreed electrical engineers with ultimate respect
or risk losing their participation in this hobby (service). If they do
not like code, then give in to their demands. Otherwise they will not
participate (gee whiz). Anyone who has enough real interest in Radio
will do what it takes to participate. A 13wpm requirement is really
going to cause a 'natural' to take the wrong turn on and miss out on
what he could have been? (Ham Radio leader or something?) Don't
worry....some natural who also is a beeper will gladly take his/her
place (or do you believe that 'natural radio talent' and beepers are
oymorons?)

>There are a few engineers who are hams, and who beep furiously, but
>when you pin them down, they say that they do it to get away from
>the complexities that they face in their jobs. In other words, it
>serves as mind pablum, like watching TV. That's not the sort of
>engineer we want

Alright Coffman, who is "we"...is "we" "you"? Are you defining what
"we"want? I am electrical engineer, beeper, a target of the

Coffman filter. Such is the way we are led by the the pioneer, the leader of the pack, the 'wheat' (not the chaff).

>or need to open up the upper bands. We want people
>so totally enamored of technology that they can't get enough of it
>at work where their free rein is limited by the need to meet deadlines
>and project milestones.

Spare us...

>That sort of person isn't interested in the
>mundane, the old, the way grandpappy did it, sort of amateur radio
>found primarily among the beepers.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
TNC/PACKET DOOR IS UP & RUNNING !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,800 FILES IN 117 FILE AREA'S..so far !
GOOD NEWS THE LANDLINE TO HAM PACKET DOOR IS UP AND RUNNING*******
ARE YOU ON THE HAM DOOR USERS LIST ???????

latest list of AMATEUR RADIO WEB SITES,now 648 sites ?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 MARCH AND FORECAST FOR 25 MARCH - 27 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 23 Mar
Daily Proton Fluence >1 MeV: 3.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.2E+09 (very high)
X-ray background: A1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Mar 26 Mar 27 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Mar: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, with an active
period 15-18UT.

Estimated Indices : A K Observed A Index 23 Mar
Learmonth 14 3223 3433
Fredericksburg 10 7
Planetary 10 7

Observed Kp for 23 Mar: 3322 2212

2B. MAGNETIC FORECAST
Date Ap Conditions
25 Mar 12 quiet to unsettled, with possible active periods.
26 Mar 8 Quiet to unsettled
27 Mar 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
24 Mar Normal-fair Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
25 Mar Normal Normal Normal-fair
26 Mar Normal Normal Normal
27 Mar Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
24 Mar 7

Observed Australian Regional MUFs:
Darwin: 15-30% depressed at times, with blanketing sporadic E
observed 19-21UT.
Townsville: near predicted monthly values, with 15-30% depressed
07-09UT.
Sydney: near predicted monthly values.
Hobart: near predicted monthly values.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
25 Mar 5 near predicted monthly values
26 Mar 5 near predicted monthly values
27 Mar 5 near predicted monthly values

In article "C. Wheeler" <cwheeler@ccnet.com> writes:

>That "offensive" subject line, and thread will never go away if everyone
>keeps bitching about it.

Absolutely right! If you are REALLY offended, send a copy of the offending post and subject line to "postmaster@ offending-party's-ISP", detailing your complaints in a concise and rational manner. Point out that the newsgroup in question is one in which such stuff is wholly unexpected and in which young hobbyists participate. With the threat of government involvement on the net, no-one needs some jerk inviting trouble and the ISP may be even more interested. and ask his assistance in correcting the problem. Most ISP's will crack down on an offending user who generates any volume of complaints at all. If you want to get under the offender's skin, just give him a cc of the e-mail complaint to the ISP; it would be the courteous thing to do anyway. Anotehr tactic 9which I do not endorse) is to e-mail back to the offender a copy of his offensive post. If enough unhappy newsgroup participants do this (some guys do it over and over and over and ...) his mailbox will get full REAL soon. But, as I said, THAT WOULD BE WRONG!!!

4014. What is the equation for element duration in morse?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-24 00:00:00 UTC
From: k4gvo@america.net
Message-ID: <4j3770$18r@peach.america.net>
Source record: 228952

Hi, all.

Does anyone remember the equation relating the element time in
milliseconds to the speed in morse?

It's something like: time= K/wpm, but I don't remember K.

Please also email. My ISP likes to toss a weeks worth of news
in the trash instead of figuring out how to keep up.

Thanks,
Jim.

4015. Re: Repeater "Broadcasting"?

>according to FCC Part 97? If it is not broadcasting in the
>legal/technical sense, is the Ham following good operating practice?
>Please discuss thoroughly and provide examples and references - have
>fun!!

This is sort of a "which comes first, the chicken or the egg."
Think first of the rules as they pertain to the operator's station.
You are required to ID only at the END of the QSO. So when you call
your frind and give your call, that call can be considered the end of
a QSO which in this case could be a sort of a braodcast. Many folks
do say somthing like nothing heard and give their call again and that
is probably more of a broadcast than just the simple call.
Now the fact that the operator was transmitting on the input of a
repeater makes absolutely no difference in the question since the
signals are all the same but in the case of the repeater can be heard
further away.
In a narrow sense, the signals may be broadcasting but the common term
for broadcasting seems to mean more than a very short transmission.
It is more longer transmissions. FCC rules would appear to suppport
this view in that it makes special provisions for the broadcasting or
one way transmissions for code practice and bulletins
BTW, the use of "nothing heard" grates on my ears almost as badly as
the often heard, "... for ID." Both are wasteful of air time.

>
>There are many codeless Techs who do a very fine job operating a radio on
>the bands above 50Mhz. What would be the difference if they opperated a
>radio on a lower frequency?

I don't agree with this line of argument. Either a Morse speed test
is necessary for HF access, or it is not. If it is necessary, then
it is as necessary for General as it is for Advanced and Extra. If
it is not necessary for General, then there is no logic to requiring
it for Advanced and Extra either. This is especially true since the
bulk of the increased privileges for those classes are access to
spectrum where Morse is generally not used, IE larger phone subbands.
In other words, is the character of the spectrum at 14.174 MHz so
radically different from the character of the spectrum at 14.176 MHz
that a different Morse speed test is needed to operate *phone* on one
but not the other? I think not.

Some have made the case that since there is Morse usage on portions
of HF where all three of these classes, and Novice too, have common
privileges, there needs to be a Morse speed test for all these classes.
There is at least some logic to that position, though I don't see the
need for *different* Morse speed tests for the different classes in
order to get access to essentially the same spectrum, IE what is
the fundamental difference between operating on 14.0249 MHz and
14.0251 MHz? Has the character of the spectrum so radically changed
between those two frequencies that a different Morse speed test is
required? I think not.

For an operator who never exercises the privilege to operate in
the defacto Morse subbands, however, the value of a Morse test
is moot, at any speed. And for those operators who choose to
operate Morse, a speed test is redundant since they must know
Morse to do Morse in any event. It is a self-enforcing situation

with no need for external speed testing at all.

Part of the problem is the way we've divided up HF spectrum into defacto by mode subbands, but haven't divided up our license classes along the same lines. Therefore the testing doesn't correspond to the privileges granted. In the commercial world, there is a Radiotelephone license and a Radiotelegraph license. This tends to make the testing relevant to the modes to which privileges are granted.

If we wished, we could design an amateur equivalent to that system where licensing exams corresponded to by mode privileges rather than to the rather arbitrary by subband methods we use today. We could have testing, and license Classes, corresponding to radiotelephone and radiotelegraph Classes where the testing and the privileges granted are in correspondence, IE we could have a phone only license, a Morse only license, a digital only license, etc, and the corresponding testing would be solely relevant to the mode being licensed.

This is probably too rational a concept to be accepted. And it does have some drawbacks. The primary drawback is that it could serve to stifle experimentation with new modes because there would not yet be a test for operation in that mode.

I've long felt that our subband divisions at HF are faulty. It leads to inefficient usage of the spectrum, crowding large numbers of operators into one part of a band while leaving other areas of a band nearly vacant. As I mentioned in another message, 40 meters is a good example. We should really be operating phone on the lower end of the band and Morse and digital on the upper end because Morse and digital operators would be less bothered by the international broadcasters than phone operators are, IE the Morse and digital operators can use narrow filters to sneak into the cracks between the foreign broadcasters, the phone operators can't. But that's not the way the subbands have been set up. If we adopted the Canadian system, we could dynamically allocate different modes to different portions of the band as conditions change. That would give us more flexibility to match our operating to the conditions of the moment and increase effective band usage. (Of course adopting SS technique would do that for us automatically.)

No, I consider myself to be an advocate. Advocates are seldom good
leaders. Though we often stray out beyond the edge of the known, and
can be considered in a sense as pioneers.

>>There's no really
>>good a priori test to separate the wheat from the chaff
>
>First you must define 'wheat' and 'chaff'. Presumably Coffman is wheat

Wheat has substance, chaff does not, it is just filler. So the wheat
is what makes a contribution while the chaff is just there taking up
space. I strive to be wheat, though that's not really for me to judge.
In my role as self-appointed advocate, I hope to make a difference.
History will judge whether I succeed or not. I may be judged as simply
a burr, neither wheat nor chaff, but rather an irritant that might
drive others to make a contribution. That would be sufficient reward.

>and all beepers are suspect of being chaff.

Certainly if that is their only reason for being, then I'd have to
say that in my opinion they are suspect of being chaff. Beeping for
beeping's sake is just a time waster, IE filler, and doesn't contribute
anything useful.

>place (or do you believe that 'natural radio talent' and beepers are
>oymorons?)

I believe the pool of dreamers and doers, those driven by internal fires to make a difference, is woefully small in any endeavor. Blocking out even part of the potential entrants to that pool for irrelevant reasons is harmful. And nowhere did I say we should limit the pool to degreed engineers. Wallpaper from an education factory is as irrelevant a measure as a Morse test. For the most part, it only means that someone marked time and followed directions for four years, nothing more. It's when they get out of school that we can judge who is wheat and who is chaff. Will they mark time in some corporate maze, striving to become middle managers who will be summarily downsized onto the street, or will they make a real difference like Jobs, Woz, and Gates? Wallpaper doesn't matter, results matter.

>>There are a few engineers who are hams, and who beep furiously, but

So tell us Mr. Finn, what have you done? What difference have you made by being an amateur? Have you been a leader? Have you been a pioneer? Or have you been in a rut? Content to rechew an old cud.

>>or need to open up the upper bands. We want people
>>so totally enamored of technology that they can't get enough of it
>>at work where their free rein is limited by the need to meet deadlines
>>and project milestones.
>
>Spare us...

That says a lot in just two words and three dots. You don't care do you? Just as long as you can chew your cud, you don't care that the wolves are circling the herd, you don't care that the grass is growing thin and the rains haven't come. You have no desire to see what's over the next rise, no desire to help the herd find better pasture. You'll just keep chewing your cud, with a glazed look in your eyes, until the grass is gone and the wolves have closed in. With those two words and three dots you have answered your own question as to who is wheat and who is chaff.

Gary, you sound to me like the ham's ham. A legend in your own mind. Would you please mind telling us what you include in your 'ham' activities besides sitting behind the keyboard and criticizing just about anything anybody else has to say ? Is that your idea of the new 'digital' ham ? Or did you just run out of things to break so now you think it's your job to bust everyone's chops ? Just because you thought learning CW was a waste of your precious time doesn't necessarily mean everyone feels that way. Judging from the amount of digital garbage you spew into the amateur radio news groups, seems to me you have plenty of time to waste anyway........ Somebody tries to write something constructive that may help somebody else, and you have to come along and try and screw it up. Many of us did learn CW in month..... but that makes us not as brilliant as you, because you took longer ? What kind of logic is that ? Amateur radio is a many faceted hobby, at least for most of us, so you stick to your mindless typing and we'll go work CW on HF, or packet on the satellites, or FM on 2 meters and hopefully we won't bump into you. Just becuase one part of the hobby is something you don't (or can't) participate in, don't fool yourself into thinking the rest of the world can't either.

: What's the point of having the FCC license other services to certain bands if
: you're just going to say, "Yeah, but that's still to close to our frequencies."?

I definitely agree with you on this, I'm just trying to make an excuse
for those losers at the Olympic planning committee. :) However, I'm just
going to answer your quesitons for the fun of it...

A 440 MHz radio may possibly, even though it's probably unlikely,
interfere with a poorly maintained 450 MHz commercial-band radio. :)

If the 150 MHz radio is getting too much interference from a maintained
148 MHz radio, the person operating that 150 MHz radio is probably too
radio illiterate to understand that it's their radio's problem, and will
in turn say it's the ham operator's fault.

From most of the ones I've been to, ham events don't have many 150 MHz
radios there, but still...if it's interfering, hey...go for it. :)

Okay, hopefully I'm done making excuses for the Olympic committee.

Larry, it depends on how much you like the guy.... If he wasn't talking to anyone, I guess some people would say he was 'broadcasting'. If you don't like the guy, and he's not broadcasting, some people would say it's poor practice to transmit 'unnecessary' stuff... If you like the guy, let's say it's good amateur practice, i.e., he made his call, and now is letting people know he's finished with the repeater and anyone else needing to use it can go ahead. Repeater 'ettiquette' seems to be different depending where you are and whose repeater you are using. I doubt seriously the candy company would say he was broadcasting, and they are the only one's who really count when it comes to rules infractions. In our neighborhood, we would consider what happened as A-OK.....

Source record: 228962

I have read a much of the debate about CW.
It just seems to go around and around in circles and
it seems that some people have nothing to do all day
except to debate the issue.
CW (morse code) is a skill that should be used by
all HF operators.
Some don't seem to understand why entire bands
are assigned for CW when only portions are for phone.
It is so that when conditions are such that an operator
can not complete his QSO or meet another for a
scheduled QSO due to band conditions or QRM he can
continue the contact or make initial contact using CW.
Years ago if you had a problem with QSB or QRM you
could just reach for the key and tell the other operator
to QSY up or dn or even to another band if necessary.
Nowadays if you do that it is likely the other operator won't
be able to copy his own call sign or have a clue as to
what you are doing.
Amateur Radio exist to provide emergency service
to the public and the public deserves experienced and skilled
HF operators.

Hyakutake Comet Radio Bounce Test Results

Based on poor ionization at VHF, it appears that
Hyakutake Comet bounce is doubtful. Never the
less, last night I made a concerted effort. Here
are the results:

- System used was my 2mtr EME station and the FFTDSP42
program. EME Signal echo detection S/N margin is
20+ dB with FFTDSP42 integration set to 1.

- For the comet bounce test, integration was set to
8 for a detection increase of 4.5 dB. Total
system S/N EME echo margin was aprox 25 dB.

- A continuous 1500 watt, 144 Mhz carrier was
transmitted for 45 Seconds. The receive period was
75 Seconds. Any reflection from the comet should
have been visible as a line trace during a portion
of the display receive window.

- Transmit offsets of 0, +1, +2, -1, -2 Khz were tried
during the test period to allow for various doppler
effects.

- After an hour of testing, no traces were seen. It
is possible that some pointing error existed during
the test since we had cloud cover and I could not
do a visual validation.

- I used the "Home Planet" program and the latest
comet position within the Arcturus star group.
It would be nice if one of the astronomy programs
would provide AZ EL pointing information
for celestial objects. During the test period,
the EME array was moved over a +/- 10 degree range
in AZ and EL.

It looks like thunderstorms for tonight so it is doubtful
that I'll be able to make additonal tests for the perigee
night.

Details on the EME station and FFTDSP program used for the
test is available on my web page.

>
>Steve Lapinskas
>KA1JJA
>

Steve:
I guess I should post a FAQ on how to do this since I have been posting general responses. Tuneup is not hard, depending on what kind of gear that is availible to the ham. I used a general coverage receiver for checking fundamental crystal frequency, a frequency counter to determine final frequency, a 6 meter rig to generate a strong carrier to the radio's receiver (radio in shack connected to dummy load and not to the 49Mhz radio) and a scanner to generate a weak signal using the scanner's oscolator to generate the on channel signal (I did not have a signal generator at the time so that is why I had to use a 6 meter radio and scanner).
The layout is straighforward on these radios and the little schematic (if Radio Shack still supplies them) helps also.
The only real word of warning is that you should tune up with a scope connected to the demodulator IC and not just the speaker. The squelch circuit is a couple of fixed resistors and is set quite high. I dont have the schematic in front of me but you want to get on the pins that feed noise to the squelch circuit so that you see white noise present on the scope. Tune for minimum noise and after everything is tune up then adjust the quad output coil for max audio.
When I get time here I will set down and print up a FAQ on this and some things that I have run across. If you have any questions in the mean time drop me a line and I will try and answer.

>Just my opinion! :-) 73 cul

..N9jhg has a good point. But I suggest searching the dos AND windows
directories...use "morse" as the search name. And use more than just one program.
Also, some of the programs you find will have sample QSO's that
the morse programs can send. Tape them by putting your recorder
mike up to the computer speaker (or being a ham) electronically
couple the audio signal into the aux input of your recorder)
..Tapes help a lot, I'm up to 10 wpm..going for 20. And that
nonsense about only 30 minutes a days...nah. The more the better,
just take breeaks when you need it.
hope this helps.

>
>Gary, you sound to me like the ham's ham. A legend in your own mind.

Hardly. I'd reserve legend status to those who must paper their walls with certificates to validate themselves. I'm as far from a "ham's ham" as one can get. I do what interests me, not what would gather fame and accolades from the masses.

>Would
>you please mind telling us what you include in your 'ham' activities besides
>sitting behind the keyboard and criticizing just about anything anybody else
>has to say ? Is that your idea of the new 'digital' ham ? Or did you just
>run out of things to break so now you think it's your job to bust
>everyone's chops ?

If you must have a bio, I've been licensed since 1963. I was very active in traffic nets early in my amateur career. I was net control for the Kentucky Traffic Net for a time. I became interested in FM and repeaters and built, or helped to build, several of the early ones in my area. I retain an interest in repeaters to this day and still continue to operate one on 70cm. I've been fascinated by amateur satellites since the first Oscar was launched. I've operated, or attempted to operate, through every one of them that was available for general use, and copied the telemetry of the rest. I retain that interest. Primarily of late I've been monitoring Pacsat activity and rebuilding my mode B, L, and S capabilities. I recently accquired a 3 meter dish and mount, and hope to have it operational by mid-summer. Another continuing interest of mine has been digital operation. I climbed on board the packet bandwagon early, before even AX.25 was developed, and have followed that activity through to 56 kb networking. I made a small contribution to the router code in use, and served as president of one of the digital societies participating in network building. I'm also somewhat proud to claim half the credit for the first digital contact via Oscar 10. Lately my interests have focused on HF digital, and the challenges that medium presents. I'm active on RTTY, Pactor, AMTOR, and Clover, and I've been learning to program DSP in order to develop my own modem designs. I don't contest or try to work Dx, never have, and have no desire to do so. When I make a contact, it is usually an extended one. I can spend a lot of time on the net while also making contacts on HF digital, due mainly to the slowness of current techniques, IE multitasking my time does relieve the tedium.

Am I the typical "ham's ham", I think not. My interests are varied, but mostly focused around the technical fringes of the service. I

do have a political agenda, and I make no bones about that. I think
certain things are harmful to the service, and want to change them,
and I think there are certain directions in which the service should
go, and I push for that. That may make me controversial or unpopular
in some quarters, but so be it.

>Just because you thought learning CW was a waste of your
>precious time doesn't necessarily mean everyone feels that way.

Oh, absolutely, but the obverse is also true. Just because some
find it easy and fun doesn't mean everyone does. I do try to make
that point at every opportunity. As an *optional* activity, I
have no quarrel with CW at all. Live and let live I say. But
I won't stand by and let claims pass that aren't true. I won't
let the myth that "Morse gets through when everything else
fails" pass when I know it is false. I won't let "anyone can
do it in a month" pass when I know it is not true, etc.

>Judging from
>the amount of digital garbage you spew into the amateur radio news groups,
>seems to me you have plenty of time to waste anyway........

Remember, I was a traffic net operator. I do know Morse. I can use
Morse, though I'm a terrilbe hack at it and it is a struggle for
me to use it. I choose not to use it now because I've found better
ways to accomplish the same result. The net is one way, and its
non-realtime nature allows me to multitask it in with other activities
I may be doing at the same time. I'm waiting for a compile to finish
as I type this, and I'm watching a Pactor contact between two Europeans
in another window. I have nothing to add to their conversation, so I
won't try, but I am there lurking. As an aside, I almost never call CQ,
just as I almost never originate a thread here on the net. I prefer to
monitor for something of interest and respond to that. Claims that
Morse is universally easy and fun is one of the things to which I can
be counted on to respond.

>Somebody
>tries to write something constructive that may help somebody else, and you
>have to come along and try and screw it up.

The tone of the article to which I was responding was anything but
constructive. It was a polemic making over-broad claims that were
patently untrue, and insinuations that were both insulting and false.
Naturally I felt compelled to respond in kind. Fighting a wildfire
often requires setting a backfire.

>Many of us did learn CW in
>month..... but that makes us not as brilliant as you, because you took
>longer ? What kind of logic is that ?

No, it only means that my talents are in other areas. I'm as bothered
as the next fellow when I feel that I, and an entire class of others,
are being denigrated as "lazy" because we're not as gifted with a certain

manual skill as are some others. The only difference perhaps is that I've been there, done that, and I'm willing to be vocal about it. I'm not some newcomer, wet behind the ears, complaining because he feels he is being asked to do something unreasonable. I've been down in the trenches. I have first hand experience with learning and using Morse. I'm proclaiming that the Emperor has no clothes because I've seen him naked.

If you look at it objectively, manual Morse is a modem emulation. It is not something that requires rational thought, it is not amenable to analysis or reflection, it's just a conditioned reflex, an animal activity like that demonstrated by Pavlov's dog. Different people have different abilities to develop conditioned reflexes for various things. What worked for Pavlov's dog won't necessarily work for Pavlov's cat.

For example, would you be insulted if Chet Akins denigrated you because you aren't as good a guitar player as he is, and couldn't pick it up as quickly? I've practiced guitar for years, yet I'm still a hack. I know it, and I've come to accept it. That's just not a manual skill I'm going to master. OTOH, I used to be a race car driver, and I'll put my conditioned reflexes for that activity up against Chet's any day. That doesn't mean either of us is lazy, or that either of us are brilliant, Einstein could probably do neither of these things. It is just that our talents run in different directions. It's like trying to teach a pig to sing, the result won't be pretty, and it annoys the pig. It's not the pig's fault that he'll never be Johnny Mathis, and it isn't Johnny Mathis' fault that he'll never be good at sniffing out truffles.

>Amateur radio is a many faceted hobby,
>at least for most of us, so you stick to your mindless typing and we'll go
>work CW on HF, or packet on the satellites, or FM on 2 meters and hopefully
>we won't bump into you. Just becuase one part of the hobby is something you
>don't (or can't) participate in, don't fool yourself into thinking the rest
>of the world can't either.

Oh, I don't. I hear that activity. I participate in a good bit of it, aside from manual Morse, and I sometimes even listen to that for a few moments, or set a machine to copying it. It often strikes me as dull, and of limited content, but that's not my business, so I tune on by if I have nothing to contribute to spice it up. I don't insist everyone do what I do, and I expect them not to insist that I do what they do. I especially expect them not to insist I do what they do in order to be allowed to do what I do. The two things are orthogonal to each other.

I find myself agreeing with Gary again... I was a VE before I became a Radio Dealer and my ethics have not changed. The important thing is to keep the instruction team and the VE team distinct. The way things are structured now if a team did choose to cheat it will not take long for that fact to work its way to the surface. Refer to the California and Porto Rican cases in the last 18 months.

The following is a QST

Revisions continue to the ham radio testing pool even as the dispute between the VEC Corporation and the ARRL drags on. This story and more on Newsline report number 971 coming your way right now.

(*****
NCVEC QUESTION POOL WORK CONTINUES

The American Radio Relay League may be at odds with the National Conference of Volunteer Examination Coordinators Incorporated, but the work of revising the questions that are used on Amateur Radio exams is going forward. As reported three weeks ago, the ARRL has petitioned the FCC to create what the league calls a "new mechanism" to

oversee the overall ham radio examination system.
So far, the FCC has ignored the Leagues request and according to Fred Maia of the W5YI VEC who serves on the NCVEC Question Pool Committee, revisions to several exam elements are underway right now:

"The Element 4B extra class questions were released and they will be used in the examination room on July the 1st as scheduled. And on February 1, 1996, the question pool committee released the syllabus, that's the outline for the next one we are going to work on and that's the no-code technician requirements which is element 2 and element 3A Technician." Maia

Maia adds that the Question Pool Committee has separated itself from the political bru-ha-ha that has developed over League membership and participation in the National Conference of Volunteer Examination Coordinators. He says that committee is letting the ARRL, the FCC and the VEC conference president work out the problem.

(*****
RAINCOAT CHARLIE FINE UPHELD

Raincoat Charlie has been ordered to pay up! Raincoat Charlie was the pseudonym used by William Irwin, K3CQR of De Bary, Florida when he was jamming other hams on 14.315 MHZ will have to pay a $500 fine. This according to the FCC which says that it has denied Irwin's Petition for Reconsideration of the monetary forfeiture.
Back in December of 1992, the FCC's Vero Beach Field Office was made aware of interfering transmissions occurring on the 20 meter frequency. The interference continued on a regular basis until July 23rd 1993. That's when federal agents traced the signals to Irwins home. During a subsequent station inspection, Irwin admitted to the FCC that he had used his station to interfere with other hams on the frequency under the guise of Raincoat Charlie.
On July 28th, 1993 the Vero Beach Field Office issued K3CQR a $2,000 Notice of Apparent Liability to Monetary Forfeiture. Irwin responded on August 11th that he could not pay. So on August 17th the assessment was lowered to $500, but Irwin still balked at paying. Again he petitioned the FCC claiming his inability to pay, but provided no financial information that would persuade the commission to further reduce its fine. Instead, he requested that the FCC permit him to inspect its records pertaining to the events that lead to his apprehension. But the commission has now ruled that the $500 fine is more than reasonable because Irwin admitted being the

source of willful and repeated interference to other ham radio communications. It has also denied his request to see the records of his case saying that can only happen if he files a Freedom of Information Act request. Even then the FCC can turn him down if it sees fit. In the meantime, Irwin was ordered to pay up. If he wants to appeal further it is going to cost a lot more than $500. That would not even be a down payment on a good communications lawyer capable of challenging the FCC in federal court.

(*****
HARRISBURG, PA HAMS HELP IN FLOODS

About thirty volunteers from a Pennsylvania radio club came to the aid of the Red Cross to help after the Susquehanna River overflowed its banks, flooding the capital on January 20th. According to John Obradovich, W3IS, who is the President of the Harrisburg Radio Amateur Club hams provided communication between Dauphin County Red Cross headquarters and two mass-care facilities that lacked telephone service. The following day, the Red Cross requested additional volunteers with vehicles for disaster assessment training and reporting. Several hams were among those who reported.

(*****
SKYWARN

And speaking about emergencies and emergency communications, word that a new communications tool came in handy when severe weather pounded central Alabama March 6th. A successful new idea was developed by radio amateurs active in Alabama's Skywarn network.
Hams in Alabama operating a Skywarn net. This has become a common event, Alabama has led the nation for 2 years in tornado related deaths. But Skywarn nets in Alabama and many other states face new challenges. The National Weather Service is doing more with less, by closing some of its offices, including Montgomery, Alabama. Two tornadoes struck in and near that area March 6th, killing 7 people and causing heavy damage. Closing the Montgomery office means local Skywarn groups must communicate with the Weather Service office near Birmingham. That's almost 90 miles away and too far for any one repeater to cover. So hams came up with a solution.
Montgomery and Birmingham radio amateurs are now tied together, it's thanks to the 220 MHZ band and some technical ingenuity. A 220 repeater south of Birmingham links hams in both cities. The link simulcasts on a 2 meter repeater serving Montgomery. And there's a touchtone activated alarm system. This allows hams in either city to call each other

when severe weather or other emergencies arise. The link system was jointly designed by Ken Barnes, KD4PEI and Ron Arant, N4PHP. It didn't take long for the system's value to become obvious.

"The signal was crystal clear and very very clean." Arant

John Simons, KC4UCP, ran a Skywarn Net using the new 220 link system.

"The 220 machine proved to be an asset that night. And I think that if other areas had 220 available, it would be more useful in the weather network." Simons

Hams in Alabama already use remote base systems tied to repeaters to extend their communications range. The 220 link between Birmingham and Montgomery is another step in their efforts to better serve the public during emergencies using amateur radio.

Voice communications networks are just part of what Alabama Skywarn groups are working to improve. Efforts are also underway to set up a wide area coverage packet radio system to assist with relaying storm and damage reports.

(*****
NEWSLINE CINCINNATI

Phil Thomas, N8LJA who produces the regional Amateur News Weekly has put a new outgoing Newsline service into operation from Cincinnati, Ohio. According to Thomas, the number for the service is (513) 745-1948.
Midwest hams interested in Thomas' regional ham radio news service can call into Amateur News Weekly at (513) 745-2824.

FREE COLLEGE HAM RADIO CLASS

A free Amateur Radio course will begin on Wednesday evening, March 27, at the University of Massachusetts, Dartmouth. The class will meet at 7:00 PM until 9:00 PM for 8 consecutive Wednesdays.
There is no charge for this course, however, the students will be responsible for purchasing their own study materials. The purpose of this course is to provide the students with the information and training necessary to pass an entry level Amateur Radio exam and acquire a FCC Amateur Operators license.
If you live in the area and want to register for the course, contact Ed or Carol Walsh at (508) 679-8527 evenings or weekends. You can also register E-Mail to

mrefw@aol.com

(*****
NEW CD-ROM VERSION OF QST AVAILABLE

The ARRL's new CD-ROM version of QST was a hit at the marketplace. The CD-ROM features an entire year's worth of QST, plus QEX and the National Contest Journal. It includes full text, photographs, schematics and other graphics, and advertisements. Among other things, users can search for text and zoom in to schematics and diagrams to enhance detail.

(*****
NEW EU EMI STANDARDS

From England comes word that the draft of the European Union EMC Standard has been published by the European Telecommunications Standards Institute. It contains procedures and tests to ensure compliance with the European EMC Directive which came into force on the 1st of January.
The Radio Society of Great Britain, through its EMC and Licensing Advisory Committees, is evaluating the document and will be responding to it. Copies are available from the:
British Standards Institution
389 Chiswick High Rd
London
United Kingdom

(*****
NEW RSGB RLO

Also, a new RSGB Radio Liaison Officer has been appointed for the county of Wiltshire, until the next session of RLO elections take place later this year. He is Ivan Rosevear, G3GKC of Bradford-on-Avon in Wiltshire. The RSGB says that its RLO's are available to help and advise members locally.

(*****
DX STAMPS

Also, the government of the Solomon Islands has released a set of four postage stamps commemorating inventor Guillermo Marconi and 100 Years of Radio Communication. The $1.05 stamp shows Marconi demonstrating his invention, c. 1896. A $1.20 stamp depicts a typical maritime installation of the Marconi International Marine Communication Company, c. 1900. A $1.35 stamp depicts the first aeronautical radio systems supplied by Marconi to commercial aircraft. A $1.45 stamp shows Marconi in Japan during his 1933-34 world tour.

The four stamps are available on a color first-day cover
from Peter Taylor, G8BCG.

(*****
UNDERGROUND CABLE BY LAW

And good news for hams down under. Word that the
Australian Federal Government has announced that it intends
to force both Telstra and Optus Vision to lay their cable
television lines underground. Local municipal councils will
also be given the power to insist on underground cabling in
their areas.
The new measures are in response to public comment about
the installation cable and pay television transmission lines
alongside existing above-ground telephone lines. The new
rules will apply only to cables that have not yet been laid;
existing cables will not be affected. Putting the new cables
underground should minimize RFI ingress to pay cable television
systems.

(*****
SOUTH AFRICA HAM CLASSES

The South African Radio League has appointed Dikgang
Moseneke as its Patron. Moseneke is chairman of the board
of Telkom South Africa's telecommunications subsidiary. At
his induction ceremony, Moseneke released a plan to
introduce Amateur Radio into South African school system.
He also wants to create a development fund to establish ham
radio stations at educational institutions in South Africa.

(*****
DX - 3RD DISTRICT QSL BUREAU

In DX, the Third Call Area Incoming QSL Bureau has a new
address. The Pennsylvania DX Association has assumed
responsibility for the bureau. The new address is:

Pennsylvania DX Association
P.O. Box 100
York Haven, PA
17370-0100

All envelopes and cards on file at the former incoming
W3 bureau have been transferred to the Pennsylvania DX
Association.

(*****
DX - 6 M BEACON FROM 4X

Also, Neil Carr, G0JHC reporets via the VHF reflector
that 4X1IF has been granted permission by Israeli
telecommunications authorities to run a 50 MHZ beacon

from his home. Neil says that Ralph has already installed a halo antenna on his tower and the beacon system itself is now complete. The beacon will take to the air in early May on 50.058 MHZ running about 3 watts and initially with Ralph's 4X1IF call.

(*****
AO-10 BACK

From AMSAT North America, word that OSCAR-10 may once again be coming back to life. Reports say that the satellite's transponder is putting out a beacon tone. Also, the downlink has been intermittently functional. OSCAR-10 is one of the oldest ham satellites still in orbit. As such it has been plagued by solar radiation corrupting its on-board computer. Also, low levels of sunlight reaching its panels have kept it off the air.

(*****
CONGRATULATIONS SAMMY

A word of congratulations to eighteen year old Sammy Garrett, AA0CR. Sammy was the recipient of Newsline's 1991 Young Ham of the Year award. Now some six years later Sammy is the recipient of yet another honor. AA0CR has been selected to receive a $1,000 college assistance scholarship from the C-Span television network. As a part of the award, Sammy also gets an expense paid trip to Washington, D.C. for himself and one of his parents. He plans to use the scholarship funds toward his first years tuition at American University.

(*****
HAM RADIO THESIS

Last but by no means least, a Georgia ham has decided to use Amateur Radios' participation in emergencies as a subject for her Masters thesis, and she is asking for your help. Bella Romain, N4ILQ of Carrollton Georgia has decided to do an in-depth study into just what motivates hams to risk their own lives to provide help to others. Sometimes doing so while putting their own personal safety at risk. She says it is something that needs to be better understood:

"Ham radio has been a part of my life for many years
Out-Q: ...ham radio operators who do this.

Since nobody has done such a study, and since Bella Romain needs a topic for her thesis, she figured she could combine the two into a single project that would benefit not only her, but the Amateur Radio service as well. To that end, she will make the completed work available to

anyone interested after it has been completed and graded.
If you want to become a part of this rather ambitious
project, drop a note to:

Bella Romain, N4ILQ
285 Timber Ridge Trail
Carrollton, Georgia
30117

You can also e-mail her via the Internet to:

>despite the bells and whistles, but a Motorola Mitrek would be better,
>and cost less than $100 (or a MIcor for $50, or a GE Mastr II for $75).
>With the change, you could also buy a scanner if you just have to have
>that capability.

C'mon Gary! The suggestions you have given here are 180 degrees from what
Stephen is looking for. You think you're helping?

Sure you can buy a Micor for $50. But then you are limited to the
channels you have put in it. And elements will most likely cost you at
least $50 a set. And since I have never seen any of those radios with
"dual band" features, he's gonna need two (no room left in the trunk for
luggage).

I agree that alphanumeric displays and other bells and whistles are luxury
items that should come second to performance - and even then, I question
some of their real value. But I think that "solid communications" can be
had for $400 in an amateur rig. You also get versatility that you don't
get from a commercial rig. But then for $200, this guy might get what he
wants with an amp - and depending on how he installs, it could be clean,
neat and easy to use.

IMO - About the only thing you gain by going to a Micor/Mitrek/Mastr type
of radio is ruggedness. But most hams treat their radios with more care
than the average refinery/pipeline/contruction worker, so I would go with
frequency agility, power control, ect. My only use for commercial gear in
ham radio is fixed stuff - repeaters, etc. - they're good for that.

4034. Albany, NY Area SAREX QSO

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-24 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xhLqIlg.sanderman@delphi.com>
Source record: 228972

FOR IMMEDIATE RELEASE Page 1 of 2

Friday's successful launch of the space shuttle Atlantis was of special interest to students at Delmar's Bethlehem Central High School. If the mission goes according to plan, several of those students will have the opportunity of a lifetime to talk directly to shuttle Commander Kevin P. Chilton, KC5TEU, aboard Atlantis by way of a special "ham radio" link late next week.

Through SAREX, the Shuttle Amateur Radio EXperiment, educators are able to bring the space program directly into the schools with the aid of amateur radio clubs throughout the world.

Hams from the Albany Amateur Radio Association are providing the equipment and technical expertise for the local "SAREX" contact.

The effort to bring the space program "down to earth" for Bethlehem Central students was spearheaded by one of its own. Senior Geoff Phillips, who holds the amateur call sign N2TJK, first suggested the idea over three years ago. Bethlehem Central Schools' Science Supervisor Dr. Bruce Tulloch, is coordinating the project within the school.

Other ham-astronauts aboard Atlantis include Pilot Richard A. Searfoss, KC5CKM; and Mission Specialists Linda M. Godwin-Nagel, N5RAX; and Ronald M. Sega, KC5ETH. The remaining crew members are Mission Specialists Shannon W. Lucid and Michael R. Clifford.

During the mission, the shuttle will rendezvous and dock with the Russian space station Mir. Later, the shuttle will return to Earth, leaving Shannon Lucid aboard the Russian complex for a 5 month stay, making her the first American woman to fly on Mir for

an extended mission. This is the third of seven shuttle flights to Mir, a precursor to building the International Space Station.

According to the Albany Amateur Radio Association's David Jones, WB2YLR, who is coordinating technical operations for the contact, only selected clubs and educational facilities receive this opportunity. "For this flight, we are one of only five groups to be offered the chance to bring amateur radio and the space program into the science classroom curriculum." The other participating schools are in San Antonio, Texas; Artesia, New Mexico; Troy, Texas; and the University of Colorado College of Engineering and Applied Science in Colorado Springs.

The Shuttle Amateur Radio Experiment is sponsored by the American Radio Relay League, the national fraternal organization of "ham" radio operators of Newington, Connecticut, AMSAT - the Radio Amateur Satellite Corporation, and the National Aeronautics and Space Administration, and supported by the Federal Communications Commission. NASA's intent in making astronauts available for SAREX operations is to involve the largest possible number of people, particularly youngsters, in technology and the US Space Program with the help of amateur radio.

Many of the astronauts in the US and Russian space programs are avid ham radio operators. NASA's support of ham radio provides astronauts with the opportunity to talk to their families and other hams around the world during their off-duty hours in space.

Amateur radio has been flying aboard shuttle missions since 1983 when Dr. Owen Garriott was the first to talk to earthbound amateurs. Slow scan amateur TV (ATV), computer packet messaging systems, and conventional FM voice communications have all been successfully used by astronaut-hams to enlighten school children.

END END END

The contact will be carried in the Albany area on the KM2H repeater on 145.19 MHz. In addition, it can be heard throughout North America on the Anik E-2 commercial communications satellite at 107 degrees west longitude, transponder 18 (9B vertical), 5.8 MHz wide-band analog audio.

At present, coverage is scheduled to begin at 7:30 AM EST on Friday, March 29th.

Sorry, Ron, but that's not it.

If a one ohm resistor is connected between the poles of a 1 volt battery, one ampere of current will pass through the circuit. If you were to use a 100 volt battery, 100 amperes would pass through. I think that you will find that Ohm's law will explain things to you and you will then understand it all. If not, just ask.

This is true, however it will be a long time before there are GPS
'approaches' published for all airports with 'instrument approaches',
thus VOR/DME will be around for quite awhile yet :-).

My only issue with use of non-approved electronic equipment on
commercial flights is that while on a 'Private Aircraft', the Pilot is
highly likely to be aware of anything in use and recognize a possible
problem with nav when it's in use. On a commercial flight, the Pilot is
highly 'unlikely' to know and much more likely to recognize a problem
before it becomes 'major'.

>have to do with amateur radio?

It has nothing to do with amateur radio. I have seen exactly what you
are talking about. CD ROM stuff seems to be the most visible
offender, at least in this area.

I would not blame this on amateur radio. This is a result of the
computer hobbiests tagging along with the hams.

Up until the late 70s, a hamfest was just that. Only radio related
stuff. Then the computer geeks decided that "hamfests" were a good
place to sell their stuff. By the mid eighties, a lot of "hamfests"
were more computer than ham radio related.

To solve this problem, you could ban all computer vendors from
hamfests. That would be fine by me. I go to hamfests to find radio
equipment. In my opinion, 99% of the computer stuff that shows up at
hamfests is obsolete junk anyway. If you really want good computer
stuff, go get a copy of "Computer Shopper" and mailorder it.

A friend of mine went to the Tulsa hamfest this weekend, and saw
a demo by SkyWalker Data Systems. They sell a decoder for the NWS data
transmissions. I hadn't heard of this, and it sounded interesting to see
what I could find on the Web. It was quite a battle with the several search
engines, but I finally did track down the main page. It is:

http://www.nws.noaa.gov/oso/oso1/oso12/document/emwin.htm

There's a schematic and protocol description. Basically it is 1200,N,8,1
and the components are a TCM3105 and a MAX232. Here locally (Oklahoma
City area) the data is transmitted on 169.025.

I think this is a great application for home use. How many of us really
listen to the NWS audio? The data products will be of much higher value.

I notice that Kantronics has released their new Amateur Paging upgrade to
the KPC-9612. It might make a great combo to transmit Alerts via
alphanumeric pagers (people chasing storms). I can see the need for voice
diminishing, and the greater throughput and reliability that can be
achieved. I'm sure there are many more applications for both of these
systems. I'm thinking about making a clone of the NWS idea and transmitting
all the BBS messages as files. A person would never have to log on to
a BBS ever again. Anyone could just tune an old scanner to the frequency
and use the software to store each file. You could then read the junk once
a month a keep up with the Morse Code debate :-)

Here's the two companies with products:

1) Maryland Radio Center, Inc.
8576 Laureldale Drive
Laurel, MD 20724
(301) 725-1212
(800) 447-7489
BBS with demo software (301) 725-8307
EMWIN datastream on-line demo, 1200-8-N-1 (301) 725-6467

a) MRC demodulator kit, unassembled $29.95
b) MRC demodulator, assembled and tested $69.95
c) MRC Weathernode software $49.95
d) MRC WeatherNode software plus the demodulator kit $69.95
e) MRC WeatherNode software plus the assembled demodulator $99.95

One of the disks filled up, makeing a mess of the DX subscription
list (as well as messing up a couple of the other lists). We're
pretty well back to normal (if you can call it that :-). Anyone
not receiving traffic should just resubscribe.

4043. Internet DX Mailing List -- Operations Guide

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-24 00:00:00 UTC
From: lyndon@ve7tcp.ampr.org
Message-ID: <4j590r$bb2@ve7tcp.ampr.org>
Source record: 228981

[This document is also available at http://ve7tcp.ampr.org/Lists/dx.html]

The Internet DX Mailing List
Operations Manual

Comments or additions should be sent to: lyndon@ve7tcp.ampr.org.

Last updated: March 24, 1996

Introduction

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the discussion of Amateur Radio DXing. This is the place to exchange tips and techniques, discuss hardware (rigs, antennas, DSP add-ons), awards, DX related software, announce upcoming DXpeditions, etc. Anything and everything pertaining to DX is fair game, with the following exceptions:

o Park your flames (and egos) at home. This list is for constructive commentary. If you don't like the way something is done, we don't want to hear about it unless you have a positive and constructive solution or alternative. (Perpetual whiners will be banished to 160 KHz with a 10 mW transmitter, and will not be admitted back to the list until they achieve DXCC honour roll on that band.)

o Discussion about contests and contesting should be kept to a minimum. The CQ-Contest list already provides an excellent forum for contest related discussions. (To subscribe to CQ-Contest, send an e-mail request to cq-contest-request@tgv.com)

Subscribing, Unsubscribing, and Administrivia

How do I subscribe to or unsubscribe from the list?

A robot maintains the mailing list subscriptions. To subscribe or unsubscribe you need to send a message to dx-request@ve7tcp.ampr.org. The body of the message contains commands for the robot. To subscribe to the list include the following command in the body of your mail message:

subscribe

To unsubscribe use this command:

unsubscribe

If you get stuck you can send a message with only the word HELP in the body. This will tell the robot to send you help about the commands it

understands.

Mail from the list might not cease immediately after you unsubscribe. Due to the way mail is handled, you will receive any messages in the delivery queue (but not yet delivered to you specifically) at the time you unsubscribe. This should only amount to two or three messages.

What about these duplicate messages?

Before you panic, check the mail headers. Many complaints about duplicates are really messages sent to more than one list. If you are subscribed to both lists (for example, the DX list and the CQ-Contest list) you will receive two copies of the message - one from each mailing list. This is not a bug.

Unfortunately, duplicate messages can also be caused by mailers at the receiving end of the mailing list. I take precautions to prevent error messages and the like from escaping back to the mailing list, but you would not believe the amount of totally broken mail software out there on the Internet these days.

If you receive one or two duplicate messages, ignore them.

If you receive more than one or two duplicate messages, and if you can extract the Received: headers from the message, you can forward copies of the message with the Recieved: headers intact to lyndon@ve7tcp.ampr.org. If you cannot include the Received: headers DON'T forward the messages. I can't debug the problem without them.

DO NOT send mail about the problem to the entire mailing list! The list subscribers cannot do anything to fix the problem, and have probably figured out for themselves that something is wrong.

Is the mailing list archived?

Yes. Archives (starting from Mid-June 1995) are available via anonymous FTP from ftp://ve7tcp.ampr.org/mailing-lists/archives/dx/.

If you don't have FTP capabilities you can retrieve the archives from the mail server. Send a message to listserv@ve7tcp.ampr.org with the command

INDEX DX

in the message body. In return you will receive a message listing all the files available for retrieval using the GET command.

Those of you with Web browsers should use the interface provided at http://ve7tcp.ampr.org/Lists/INDEX/dx/.

How do I send a message to the list?

It's easy! Just send an e-mail message to: dx@ve7tcp.ampr.org. Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day

or so, send a message to lyndon@ve7tcp.ampr.org (NOT the general submission address) and I will look into the problem.

Here are a few things to keep in mind when sending a message to the list. Adherence to these guidelines is mandatory! If you fail to follow them you will immediately be removed from the list.

o Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

o Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

o Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is necessary to establish the context for your reply.

o Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air.

o If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary list traffic.

o Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

o Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the "envelope" from address instead of the From: or Reply-To: header values. Note that replies sent to the wrong address get filed in the bit bucket.

Copyright and Other Legal Muck

Can I reproduce material from the mailing list?

No compilation copyright is asserted over the mailing list. The individual submissions to the mailing list may be (and probably are) covered by national copyright law, and international copyright conventions. When in doubt, consult a lawyer.

If you do reproduce information obtained from the list in a published newsletter please give credit to the message author and the mailing list.

Other Related Internet Services

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of DX related bulletins is available via anonymous FTP from ve7tcp.ampr.org:/bulletins/. I add back issues as I come across them. Feel free to contact me if you can help fill in the holes. At some point I hope to set up a WAIS search index that will let you do keyword searches on the bulletins in the archive.

Lisa,
As long as I have been a Ham Radio Operator, there have been potty
mouth people on the air, no matter what frequency. I am sorry that you
as a new ham have to listen to this.
QSL and have a great day.

SB DX @ ALLBBS $OPDX.248
Ohio/Penn DX Bulletin No. 248

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 248
BID: $OPDX.248
March 25, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2UFT, AE4EZ, AA8SM, NL7TB, NW8F, KB9CRY, W0YR/4, EB2DD, DF4RD, K4YT/DL4YT, DL4VBP, F6AJA & LNDX, F8RU, G4BUE & DX News Sheet, IK2SGC, LA6RHA, ON6QR, PU2LSR and VK2SG RTTY DX Notes for the following DX information.

3W, VIETNAM. Just a reminder! Franz, 3W6GM, will be going QRT on March 31st and returning to Germany. He can be found daily 1100-1500z on 14198 kHz. QSL via DF5GF.

5R, MADAGASCAR. Gerard, 5R8EN, continues to be active daily on 40 meters for the West coast USA stations. Look for him on 7057 kHz while he is listening on 7240 around 1415z. He will give a CW QSO on request. He cannot operate between 7000 and 7050 kHz due to the local restriction, yet there have been reports of activity on 7006 kHz around 0345z. QSL via F6ARA.

5T, MAURITANIA. Bernd, DK3LQ, will be leaving Senegal (where he is currently active as DK3LQ/6W1) and hopes to be active in 5T-land, late March or early April as 5T5MB.

9L1PG AND 9L1MG GOING QRT! Cecil, NW8F (QSL Manager for Paul/9L1PG and Millie/9L1MG), has informed OPDX that Paul and Millie will be leaving very soon (possibly May 15th). Paul will try to spend some time on 80 meters CW for those who still need him on that band. Millie is usually active on the 14226 DX Net. QSL both to NW8F Cecil Williams, 875 Kittle Rd., Wheelersburg, Ohio 45694.

BV, TAIWAN. The DXNS report BO0OKS will be active next week (March 29-30th) from Kin-Men (Quemoy) Island. QSL via BV2KI.

J5, GUINEA BISSAU. VK2SG RTTY DX Notes report I4LCK and IK4SDY plan to operate from Majo Island (IOTA AF-020) from March 27th to April 6th, signing J56CK and J56DY, respectively. Activity will be on CW, SSB and RTTY. QSL via home calls.

JW, SVALBARD. The three operators JW6RHA (Unni), W9THA (Turid) and JW8KT (Inger) will be active from March 31st to April 7th. Activity will be on SSB and CW modes. Check on SSB around 14248 and 21248 kHz. Unni, LA6RHA, reports that they will fly from Oslo to Svalbard and occupy a small cabin where Unni said their biggest fear is polar bears!

KH6, HAWAIIAN ISLANDS. Look for Laing, KB3TS, (signing KB3TS/KH6) who will be on vacation and plans to be an entry in the CQWW WPX SSB Contest as a multi-single with his son Tim, N3KEG/KH6. Their length of stay is unknown at this time.

NOTICE OF CANCELLATION. Ken, AE4EZ, reports his DXpedition to Cocos Keeling (VK9/C) and Christmas Island (VK9/X) was cancelled because he had to attend an emergency meeting at Tokyo. Ken plans to make another schedule in the future from these islands.

PIRATE ALERT!
3V8AS PIRATE (POSSIBLY)? Sources from Europe indicate that this may be a pirate (not even in 3V-land) and a scam that is taking place. The DXCC Desk does not accept 3V8AS cards at the present. You may be throwing away your greens stamps for nothing. Wait until there is a DXCC acceptence.
TT8AK PIRATE. Antoine, F6FNU, would like to let everyone know that this station is NOT legitimate. Also, this Chad callsign has not been re-issued.

QSL ROUTE. Matt, IK2SGC, from the (MC2) Contest "TEAM", says if you need a QSL card from any of the IU2M, II2M, and II7M contest operations, you can send it by the bureau or at the same time send Matt an E-mail message to his InterNet address: matt@galactica.it

QSL TIP! Karl, K4YT/DL4YT, states he has been assigned to the consulate in Frankfurt since 11/94 and travels to the former UI8 and UJ8 from time to time. He has been helping the hams out there with outgoing QSLs and some in coming. UK9AA uses him as a central collection point for his cards. Karl states he is really not his manager, but he or one of his engineers flies to Tashkent and Dushanbe each quarter and brings him his cards. Karl suggests using one of the following address:
Karl Renz Karl Renz, DL4YT
PSC-115 ESC Frankfurt -or- D-60320 Frankfurt
APO AE 09213 Ernst Schwendler Str. 5/6
Germany

S0, WESTERN SAHARA. Members of the LYNX DX Group have announced that they will be on the air from April 5 to 8th. The DXpedition team will consist of EA2BP, EA2BSJ, EA2CLU, EA2CNU, EA2JG, EA2KL, EA3ELM, EA3GBU, F2VX, F6EXV and Naama S01A. There will be activity on SSB, CW and RTTY, with operations on 6-160 meters, including WARC bands and RS-12. There are plans to have two stations on at the same time. Also, there may be a special prefix used to celebrate the 20th aniversary to Western Sahara. Look for them on the usual DX windows. QSL via EA2JG, Arseli Echeguren, Las Vegas 91, 01479-Luyando, Alava, Spain.

TF, ICELAND. A Belgian team will be active from Reykjavik (IOTA EU-021) using TF/callsign/P, from March 26th through April 2nd. On March 28th, they will be active from the Westman Island (EU-071) using TF7/ON6QR/P. After installation of the portable station, they plan to be active between 1000 and 1700z. They also plan to take part in the CQWW WPX SSB Contest. The contest team is composed of Fred/ON6QR, Peter/ON7PC, Jack/ ON5OO, Stef/ON1KSZ, Tan/ON4KHG and Seb/ON4LAI. Look mainly around the IOTA frequencies (7060, 14260 and 21260 kHz). QSL via ON4GO.

The Northern Illinois DX Association is pleased to announce the 44th Annual W9DXCC DX Convention and Banquet will be helded Saturday, September 7th, at the Holiday Inn Rolling Meadows, ILLINOIS. There will be interesting programs, guest DX speakers, industry representatives, contests, exhibits, QSL checking, hospitality suites, banquet activities and PRIZES, PRIZES, PRIZES. For info contact: NIDXA or Chairman - Phil Camera, KB9CRY, at (708) 343-1696, FAX (708) 343-4394 or his E-mail address: Iphil@aol.com

USI ACTIVITY ("United States Islands" Awards Program). Jim, KA3UNQ, will be active on Cobbs Island (MD-NEW!) and St. George Island (MD-06) on Monday, March 25. Jim will fire up on 14.260 kHz -/+. Both islands are in the Potomac River.
The US Island Directory and island list is available on the "WEB" thanks to John, WD8MGQ. There are two versions of the island list ("complete" and "master") to choose from. The "master" version is the most detailed.
Try: http://www-dx.deis.unibo.it/htdx/islands/usiarule.html
http://www-dx.deis.unibo.it/htdx/islands/usialist.html

VK9X, CHRISTMAS ISLAND. In a press release by Warren, KF7AY, he states: "In the latest in a series of VK9X operations from this newly established Christmas Island Casino Resort, Martti Laine, OH2BH will lead his family team, Leena, OH2BE, and Petri, OH2KNB, to a well earned DX vacation over the Easter Holidays." They will touchdown on Christmas Island April 6th, for 5-day stay using the callsign VK9XM. You will find VK9XM in the vicinity of the usual DX frequencies on the bands where VK9XM can make the most of the band conditions. QSL is via JA1BK.
ADDED NOTE: OPDX InterNet subscribers will receive a copy of Warren's complete press release in an additional bulletin this week.

WP4, PUERTO RICO. A group will be active as WP4U as a Multi/Single operation in the CQWW WPX SSB Contest. Operators will consist of: WP4U, WP4G, RC2AR (AA3BG), RX3QA (KB2WBQ), EW1WZ (KB2WBP), UH8EA/EZ5AA and UR5LAW/UB5LAW. QSL to AA3BG, Box 766, Brooklyn, NY 11230.

YM, TURKEY. In the upcoming CQWW WPX Contest (SSB), a group of contesters from the German Rhein Main area will be active from the city of Izmir as a Multi OP/Single TX category using the callsign of YM3DL. They hope to be able to make CW/SSB contacts on 10-160 meters before and after the contest. They will be using YM3DL from March 29-31st and individual callsigns (ex. TA3Z) days before the contest. They will arrive at Izmir on Wednesday, March 27th and operate from the QTH of Mustafa, TA3B. Operators will be: Felix/DL8OBC/AA0NV, Thomas/DL3FDU and Patrick/DL4VBP/ AC5FJ. The QSL route for all contacts made during this operation will be

via DL4VBP new address: Dr. Patrick Scheidhauer, DL4VBP,
Fontanestrasse 134,
D-60431 Frankfurt (Main)
Germany

ZW & ZY, BRAZIL. Look for the following special callsign to be active in CQWW WPX SSB Contest: ZW2WAL (op PU2LCD) as a Single/Op Single Band entry on 10 meteres around 28400 kHz and ZY2HT (op. Rob, PU2LSR) as a Single/Op Single Band HI-POWER station on 40 meters.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

> Funny, it's still popular today and the code requirement is still here.

The wheels of government turn exceedingly slowly, but here we are
20 years later and the largest amateur class is indeed code test
free. And digital operation has exploded from being barely a blip
on the radar screen to the second most popular amateur mode overall,
and a rapidly growing third on HF. I expect it would already be
second on HF as well if it were not for the vestiges of Incentive
Licensing with which we are still burdened.

In 1975 those authors were prophets crying in the wilderness, but
now we can indeed see that their visions were prophetic. The handwriting
is on the wall, clear for all to see. Will we persist in fighting
rearguard actions that are ultimately doomed, or will we move forward,
embrace change, and take advantage of new opportunities to communicate
better?

I don't believe that's a defensible claim, except in the tautological sense that code proficiency makes better *code* operators. Every operating mode has its own set of skills, some are common, some are not. A Morse Code speed test evaluates only one very narrow modem emulation skill, with practically zero crossover to operation in other modes. Understanding propagation, understanding transmitter operation, etc are skills common to all operators, but a Morse test doesn't evaluate them.

Apparently, lots of radio amateurs buy it, otherwise these vendors
wouldn't bother showing up. Perhaps that tells you something about
radio amateurs you didn't want to acknowledge, but there it is.

Others have complained that the presence of computer equipment vendors
at hamfests doesn't have anything to do with amateur radio. But their
numbers too are growing, and they wouldn't be there if the equipment
wasn't selling.

Society is changing, and perforce amateur radio is changing along
with it, as it always has. We can rail against those changes, but
it's like trying to bail the ocean with a spoon. It's ultimately
a futile effort. Amateur radio is inevitably a reflection of the
society in which it exists.

I don't particularly like the image that this creates for amateur
radio, but it is unfortunately a reality. It shows that a mostly
male, mostly middle aged, mostly white group of asocial loners has
a rather large subset who like to look at dirty pictures. I'm not
sure that this should be hidden from potential amateurs. Perhaps the
young should be aware of the type of people with which they are
planning to associate.

Of course not all amateurs fit that stereotype, just as not all
gun owners are neo-Nazi skinheads or KKK members, but some are,
and there it is. Trying to sweep it under the rug doesn't make
it go away.

<about banning porn from hamfests>

Steve, the challenge is for a club/hamfest committee to come up with a rule which, if uniformly applied, will bar the purveyors of porn, but permit those other non-ham ventures involving knitted dolls, hunting knives, etc., etc.

If you can figure out how to do this, my hat's off to you.

73 QRO dear OM.
Tks reading this mail.

I would like to upload on a HAM FTP HOST my software who do TX and RX
CW MS hight speed with a single PC286 (or more) and a very small
interface (as JVFAX).

But, I can't upload my software (ZIP file of about 110 kByte with C source,
help, database, ...) on a FTP HOST because the writting access is denied.

Who can help me to give a access to a HOST or give me the adress of a
HAM FTP HOST with permissive upload ?

Tks a lot, Jean-Pierre

There are probably laws in your area against the public exhibition of such materials, particularly in the presence of minors. A quick call to local law enforcement during the 'fest probably would have solved the problem.

Bill Newkirk (wnewkirk@iu.net) wrote:

: that's code free technicians, 'dere, frank. there's a lot of no-tech extras too.
: and what do you think about waivers?

It is irrelevant what any of us "think" about waivers. The VE has no choice or latitude in this area; he must accept the waiver.

We had a gentleman come in at our last VE session with a waiver for the 20-wpm code test. He had already passed all written and code requirements, but could not get beyond 17 wpm. He saw an audiologist, who determined that his hearing loss was such that he would need a hearing aid in about two years.

I could tell that this gentleman was not trying to pull anything. Sure, the problem with the waivers is that, like everything else, there will always be those who try to abuse the system.

BTW, be sure to charge the appropriate testing fee to such an applicant, even if he takes no tests - it is an administrative fee. Not knowing this cost me $6.05, since I did not collect before he left.

: >Can anyone share with us what they have done to motivate hams to upgrade?

: 1) offer a regular testing session.
: 2) hold some events that would encourage operation of the needed skills
: and technical knowledge.

We are fortunate enough to have a permanent location for our club. Every Wednesday evening we have classes in code and theory, up to 13 wpm and Advanced Class, as necessary. Our largest product, not surprisingly, is the no-code Tech, but we have also had one 15-year-old high school student make the trip all the way to Extra in less than a year. Yes, some folks do upgrade.

We also have two operating HF positions at the clubhouse, and a group of enthusiastic OTs to encourage the newcomers, and to answer their questions.

Finally, we have VE testing at the clubhouse, once a month. Everything at one convenient location so that folks are comfortable.

If you consider only the licensed hams who are members of our local club, about 56 percent are Techs, and 44 percent are holders of General Class or higher licenses. Yet all some members seem to be fixated on is packet.46

Nobody said that that the author of the profane article was "bad"
nor made any personal attacks in the newsgroups that I follow. Does your
comment reflect YOUR true feelings - that he is "bad"?

1.) Talking and broadcasting are two very different activities. One
usually knows exactly who they are talking to, but not who is listening to a
broadcast. Therefore, a little more restraint is in order for the latter.

2.) He did not just say he ____ed up his transmitter, he said it over and
over again. Not only that but he went into excessive detail about things
that had nothing at all to do with the radio problem to the point of
distraction.

3.) Your only as old as you feel and I feel pretty young.

4.) Compared to other resources, the "net" is more full of chaff than
wheat. Anything we can do to change that is a positive. Did the profane
post elucidate anything for anybody?

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified section will include Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Message-ID: <4j2jp7$9eg@yrkpa.kias.com>
Source record: 229038
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I'll probably get a lot of hate mail over this but here goes.

With hamfests coming up I thought I would write something on my mind.
It seems more and more hamfest are allowing venders selling porn for the
computer. The last major hamfest in my area there were vendors selling
this stuff and nothing else. The vendors were even selling videos for
the vcr. It wasnt just one or two vendors but several vendors
selling this stuff. This is not just the swimsuit issue or playboy but
hard core stuff. This stuff was even out in the open. What does this
have to do with amateur radio?

We are always encourging the young to get into amateur radio and we
always are talking about our radio manners for they may be listening.
How about how we represent amateur radio at these shows. The hamfest
is a great way to get the young interested in ham radio. I feel its
a poor way to show what amateur radio is about.

I know clubs need money but I feel this is going to far. I feel
a club supporting and allowing this is out of line. If you agree with
me please let any clubs sponsoring hamfests that you dont agree and ask
they dont allow any vendors to sell this at a hamfest.

We need to represent ourselfs in good faith not just to the young and
future hams but also our community.

Any amateur radio magazines may print this.
Maybe it will do some good and get people thinking.

Hi there,

Can anybody supply me a diagram-copy for the STANDARD AX700 scanner
50-904 Mhz. This is my own unit. The 2nd PLL goes out of lock
sometimes. Carefull tuning the trimcap (very touchy and sensitive)
on this module then restores lock again until the next time
(days-weeks up to months). In the out-of-lock condition a "
machine-gun " sound is heard (most probably caused by "hunting" of
the PLL control feedback) only when receiving a signal. It seems to be
quiet with no-signal even with the sql. control fully open. The
problem appears to be temperature related to some degree. There are a
lot of pots on the main pcb, so maybe it just needs a good alignment.
I will meet all costs; copy, postage ect.

Thanks Deon

Here in SE Pennsylvania we're too far from Newington to get code practice
on FM VHF. However, several local radio clubs run code practice "to
order" on the club repeaters. At least one club has a phone number you
can call to order the speed of your code practice if you cannot transmit
on the band, but can receive, where the code practice is transmitted.
Ask around. Maybe there is a similar setup in your area.

Good points. Thank you. The best thing to do with offensive posts is
simply ignore them.

I am looking for a portable HF radio. I've got a chance to
purchase a used Kenwood TS-50(HF) with the optional CW filter.

I have also been looking at the Icom-706. I am new to amateur
radio and would like your opinion with regard to portable HF
transceivers.

Kenwood TS-750 (used) $700.US
Icom IC-706 (new) ~$1200.US

Comments Pros/Cons are welcome.

>Gary Coffman KE4ZV

Gary,
What you are saying makes a lot of sense. I only offered my solution as a
compromise. There are many Amateurs that want to see the code requirement
remain.

I also agree with you about the sub-bands. I feel the code portions could be much smaller also. Other than a contest, I have never seen the code sub-bands "crowded".
In any case, I think we are due for some changes.

Sen. Goldwater is a long-time ham radio operator (K7UGA), and has been a staunch advocate of our fraternity in high places. I've heard that he still gets on the air. Goldwater was born in 1909, so he's seen the evolution of radio over most of the century. Whether you agree with his politics or not, he probably has quite a few good stories and insights to share.

Steve,

I noticed the same thing at our last hamfest, but am happy to say I
didn't see anyone purchase any of this junk. If no one buys, they will
only be there once.

I don't know if the organizers can control the merchandise sold on
their tables, but they do sell the space, I suppose it would be a
violation of the 1st ammendment though, everything else reguarding porn
is.

4079. Appropriate newsgroup for CW requirement discussion

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: myers@West.Sun.COM
Message-ID: <4j73hm$f9@abyss.West.Sun.COM>
Source record: 228852

Not to play the heavy-handed Net.Cop, but rec.radio.amateur.policy
is the appropriate newsgroup for discussion of the CW requirement.
If you don't believe me, have a look at the charter of the newsgroups.

Of course, discussion of Morse code not related to the requirement
may belong somewhere else. Selection of code keys and keyers probably
belongs in rec.radio.amateur.equipment, for example.

Message-ID: <960325180020636@basselope.org>
Source record: 228853

DM>From: myers@West.Sun.COM (Dana Myers)

DM>The point of my paragraph is that many non-ham radio people perceive
DM>amateur radio as being of little or no value. Eventually, these perce
DM>influence how the service is treated by the FCC.

Dana,

It's not only non-hams who have that perception.

Personally, I fail to see see ham radio as having any significant value.
At best, I think it has limited value in two areas:

1) As a way to attract *some* kids to technology, an interest which may
later develop further. Probably only happens to a small percentage and
ham radio is not really essential to the process.

2) as a hobby from which an individual perceives some satisfaction.

I view ham radio as providing very little in *real* public service. Those
days are far in the past. Parades and track meets, etc. went on perfectly
well before we developed 2m FM.

Before the flamers decend on me and claim that I don't know anything
about ham radio, let me mention my experiences:
Ham for 32 years, Extra for 25. High level NTS operation, high level
ARPSC, RACES RO, State Mars CW Officer, Packet BBS Op (in the early days
of Packet networking). I have operated all bands from 160 through 220. I
was operating 6 and 2 meters before repeaters and even before FM became
popular.

As for emergency service, I spent 15 years in the fire and ems service.
When I was new, I thought that ham radio could help. When I had
experience under my belt, I realized that it could help very little.

"International good will"? I really don't see what goodwill comes of the
"Ugly Americans" piling up for a 20 second "579 OH, 73" contact.

Technology development? I don't think so. Most of our newer technologies
have been developed FROM commercial technologies, not the other way
around. Technology moves too fast today to wait for any developments from
ham radio.

My current ham radio interest is in increasing my cw speed. Not because it
has any value to anyone, but because I find cw more enjoyable at higher
speeds.

IMO, if ham radio totally disappeared today, I think the only significant effect would be the economic affect on the manufacturers.

Please don't misunderstand. I am certainly not against ham radio. Its just that I think its real value is grossly overinflated.

L >
L >Regards
L >
L >Lloyd
L >
L >
Lloyd,

I think different approaches work well with different people. What I found worked for me was to use a code practice oscillator and send a character and then say the letter in my mind. Keep up with the same letter 50 or 100 times, then move on to another letter. Later come back and do the first letter again.

IMO, you want to develop a Pavlovian response so that when you hear "dit da da" you think and write "W". When you hear "dah dit dit dit" you write "B", etc.

Once you develop that and know the alphabet and numbers well, then you might start listening to some code tapes or listen to on the air code practice.

4082. Esperanto vs Klingon

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: "William W. Munsil" <wmunsil@primenet.com>
Message-ID: <4j7etu$22q@nnrp1.news.primenet.com>
Source record: 228855

There has been some discusion here about the International Language,
Esperanto versus the made for tv language Klingon.
BTW, Klingo means knife blade in Esperanto. Esperanto (one who hopes)
doesn't exist in Klingon. In other words, there's no hope for Klingon.

Latest figures for Esperanto speakers vary between 600 000 to 2 000 000
people in over 100 countries! Over 75 countries have national Esperanto
societies.

Esperanto is similar to ham radio in that if you are not involved with it,
you don't have any realistic idea of what is going on.

So, you know where you can put your "language" Klingon!

4083. uk questions for amateur radios future

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <827779293.6105@skypilot.demon.co.uk>
Source record: 228856

General Questions on AR
=======================
1. Are you aware of the declining numbers of amateur radio
operators in the UK, about 200 per month.
2. Is the RA aware of the decline in activity on the amateur
bands in the UK.
3. Do you know that there has been an increase of 41,000 hams
in the USA in the last 12 months.
4. Two years ago we were told by the RA Chief Executive that we
would be getting 'the greetings messages facility' for use
from home but this has not happened, why and when will it
happen. If the delay is being caused by contacting overseas
administrations can the facility be introduced for 'inter UK
working' in the mean time.
5. How much did RA spend on promoting AR in the last 12 months
6. Will the RA make public the agenda for any meeting it has
with the RSGB. In the USA this is a legal requirement,
(Government in the Sunshine Act) this gives interested par
ties the opportunity to make an input and comment.
7. Do the RA plan to run a BBS for 'on line' access to the RA
database, in the USA the FCC already have this available.
8. Is the RA available on the Internet, if not do you have any
plans to do so, the FCC already have a page on the World Wide
Webb.
9. Why are the minutes of RSGB/RA meetings 'secret' and not made
available. Why is the RA still so secretive in 1995.
10. Are you aware that GB2SM (Science Museum) has closed after 50
years of operation and the Science Museum have no plans to
re-introduce the amateur radio exhibit.
11. I read in Who's Who you are a radio amateur what is your call
sign and are you active, if so on what bands.
12. Will you permit crossband repeaters from HF to UHF/VHF ie
2m/70cm to 28mhz, these are widely used in the USA.
13. Is it legal to operate the main HF station remotely, using
uhf/vhf and DTMF tones e.g. while driving or walking. This is
already available in the USA.
14. Will you make available 'for sale' the internal RA staff
phone directory. FCC make this publication available.
15. Do you plan to introduce an 0800 number FCC already have.
16. Will you allow 10m FM repeaters, already other countries in
Europe have these, as usual we are behind the times.
17. How many NOv's are in force on amateur licences to combat
abuse e.g. has anyone been prevented from using just 2m.
18. Will you make available the full data of all Amateur radio

callsigns showing the status of every callsign ie when it was last issued, revoked or when it became 'silent key' etc.
19. In the USA they have a system called 'Notice of proposed Rule making' this is a far better system for dealing with proposed rules changes than we have here. Any proposal submitted by a customer has to be published by FCC and com ments are invited. Here, no publicity is given and no-one knows how seriously individuals letters are dealt with by the RA.i.e. are only proposals put forward by the RSGB at your meetings given proper consideration by senior management. Here individual letters and proposals maybe answered by junior staff who would may not understand the details. In the USA all proposals are treated at the same level.
20. Because the RA is holding back new technology in amateur radio perhaps this is contributing to the falling numbers here. The hobby needs to keep up to date so as to keep 'tec hnical people' interested. An example is Repeaters which have hardly changed in technology in 25 years. In the USA repeat ers are very High-tech and offer many facilities. Is the problem one of changing civil servants at the RA, learning on the job and after they have been there a few years moving on to another Government department. Amateur radio customers are dealing with new junior staff who don't understand ama teur radio and have had little training. How many staff at the RA have been involved with amateur radio for over 30 years like members of the RSGB LAC have. How do you make up for this imbalance of experience on the RA's part.
21. With the future privatization of the radio spectrum is this why the RA shows little concern about amateur radio. Does the RA have an 'hidden agenda'i.e. the more the amateur bands are unused then the more frequencies available to be sold off.

Scanners
========
1. Is it legal to produce lists of who uses what frequency and to comment on such transmissions and frequencies in magazine articles.
2. Has any action been taken against Interbooks of Perth for their frequency directory.
3. Are you concerned about of this type of publication.
4. Are there any plans to change the law and make listening to any frequency a right, if not why. In the USA this right already exists.
5. With the wide use of scanners today, is the 1949 W/T Act out of date, it is nearly 50 years old.
6. How many people have been prosecuted for listening to the Police.
7. How many people have been prosecuted for listening to the Fire Service.
8. How many people have been prosecuted for listening to the

Ambulance service.
9. How many people have been prosecuted for listening to Air
craft.

Aeronautical Mobile operation
==========
1. When do you expect /am operation be introduced
2. How many years has /am been under discussion
3. What are the issues involved
4. What is causing the delay
5. Do you know /am operation is already available in the USA and
other countries
6. Do you plan to have it available as an Nov. In the USA any
person can operate /am who holds an amateur licence. This has
been able to do so for years.
7. What has been the progress so far
8. What are the names of the RA/CAA/RSGB officials involved
9. When is the date of the next meeting to discuss the subject
10. How many meetings have you had

Packet
======
1. How can the 'pecuniary interest' clause be removed from the
amateur licence to permit adverts for amateur radio equipment

only, using packet radio.
2. Radio Amateurs have always sold their equipment 'on the air'
on voice and ignored this clause and no action
has ever been taken against them why should they not be al
lowed to take advantage of new technology. Adverts for
amateur radio equipment only, are legal in USA Canada and
other countries. They take a more sensible view of ITU rules.
3. No password system for sign-on operates on packet and there
fore the system is wide open to abuse. Anyone can presently
sign on and pirate any callsign and send a bulletin using that
callsign. This results in some very abusive bulletins being
sent on the network. Passwords are readily available in the
BBS Software but Sysops have so far not implement them. In the
USA and other countries passwords are mandatory.
4. Packet in the USA is already connected to the 'Internet' and
offering international 'gateways' would it be legal for such
connections to be made here, if not why. If it is Ok what
would be the restrictions placed on the use of it.
5. How many HF Packet BBS stations have been licensed and how
long does it take to obtain an HF Packet BBS licence.

Phone patch
==========
1. Will we ever get phone patch here
2. What are the issues involved
3. What are the agencies involved

4. Who are the contacts at those agencies
5. Would any changes to the amateur licence have to be made to
permit this to happen
6. Are you are aware the USA has had phone patch for years
7. Are you aware that it saves lives.
8. Would the 1984 Telecoms Act permit phonepatch
9. Is the RA in favour of the phonepatch for amateurs.

It seems to me, that compared to the RA,the FCC have got their
act together, are on the ball and delivering the goods.
When that happens, amateur radio grows and prospers.
Taken from Wireless World 1994
==========
New challenge for amateur radio.

When was the last time that you read or heard
something positive about amateur radio?
I can't remember either.
Everyone recalls and enjoys the Hancock
sketch where the man himself played a
pompous, petty and technically
incompetent ham communicating with a
world where everybody wanted to talk and
nobody wanted to listen. We remember
Tony Hancock's radio amateur because it
encapsulates truth about the hobby more
accurately than any words that we might
write about it.

Amateur radio desperately needs a new
reason for its continued existence.

Radio communications was the principal
driving force behind electronics
development from its beginnings until the
end of the second World War. It was used
to tie empires to their mother countries,
and then as an instrument of war itself
when empires disintegrated. Radio hams
found themselves involved in research and
development, especially in the early days
of radio, and then as a source of specialised
skills in the war years.

There was a post-war surge of interest
fuelled by the availability of surplus
equipment, most of which required
technical competence to adapt for amateur
use. But when this was gone, radio
amateurs became simple consumers and
mostly bought their equipment off the shelf
losing much of their technical

independence and usefulness. Galton and Simpson were now able to document Hancock's radio ham.

Somewhat paradoxically, the intellectual decline in amateur radio reached a trough when the numbers engaged in the hobby peaked in the early Eighties. Two factors combined and contributed in this. Firstly, the multiple choice entrance examination as an order of magnitude easier to pass than its written predecessor; secondly, radiocomms as a hobby was massively popularised by the CB boom. Most of the new influx could contribute nothing except self-conscious and inane chatter using equipment which owed more to credit card companies than the owners' technical competence. We are now seeing a decline in the number of radio amateurs as the novelty wears off.

Naturally, this jaundiced view does not tell the whole story. One only has to look to the work of Amateur satellite groups and the activities of Surrey University to appreciate that some aspects of the hobby remain challenging, educational and useful. A few enlightened souls still manage to push the bounds of RF design engineering, usually by combining the demands of their jobs with the pursuit of their hobby. But if amateur radio is to command any respect - and retain its frequency allocations and privileges - it must take up new challenges.

The market requirement for cordless communications once again casts RF engineering as a driving technology. While it seems unlikely that amateur radio could contribute directly at chip level development it has a role to play in enthusing and educating the next generation of RF engineers. As editor of this magazine I hope to hear from radio amateurs prepared to experiment with direct digital synthesis, If band, DSP spread spectrum communications, high performance small signal and large signal RF systems, broad band design techniques and packet

transmissions etc.

If amateur radio finds itself incapable of
of, or indifferent to accepting a new challenge,
then it does not deserve to survive.

20 March 1996

United Kingdom Radio Society
==========

Since the concept of a new national society was mooted, I have received an increasing number of requests for details about where subscriptions could be paid. Although I have very gratefully noted the total commitment implied by such early offers of payment I have so far refused (politely I hope) to accept them.

That is because I was waiting for wiser counsel to confirm that my own expectations - which so many of you share - are attainable and that the new society can be so organised as to ensure that its members can safely entrust it to represent their best interests without ever feeling that they have "lost control" of it.

In light of some of the bulletins which have appeared recently, I should perhaps confirm that I realise members do not join an organisation in expectation of being consulted about every little issue that comes along. I have never suggested otherwise and, similarly, it was never my intention that the new society would freewheel aimlessly from one referendum to the next.

However, I specifically _am_ concerned by the ease with which the governing bodies of so many large organisations come to believe that they know better than their members about what those members need. Equally, I am concerned by the way in which, for all practical purposes, such governing bodies cease to be accountable to their members. These problems are by no means unique to amateur radio and, whilst I am sure there must be exceptions, it has been my experience that the risk increases as the size and influence of the organisation increases. This is the pitfall of which I am so wary: It is the one thing, above all others, which would lead members to be unhappy with their society.

I have now received the professional advice I have been waiting for and I am very much more comfortable with our prospects of success.

On that basis I can now confirm that the new society _will_ be formed and that, having considered such representations as have been made on the subject of its name, it will be called "United Kingdom Radio Society" (UKRS).

Arrangements for its incorporation are in hand. Professional Accountants and Solicitors have been consulted and are actively

working in our behalf. Arrangements have been made with Yorkshire Bank plc for the safe receipt of monies and the provision of banking services to UKRS on attractive terms. All are aware of our intentions and, when the Certificate of Incorporation is received, the bank accounts will be transferred to corporate status (but with the same, helpful terms) and the retention of professional accountancy and legal services will be formally reaffirmed.

Since the conduct of the society will be prescribed by its Memorandum and Articles of Association, it is not proposed that a Constitution be drawn-up in the interim. The Memorandum and Articles are being drawn in accordance with the proposals outlined in my first bulletin, "The Monopoly Ends ...."

In fairness to the society's members, no further changes will be made until and unless they are deemed necessary by the members themselves and adopted at General Meetings called for that purpose. Since it would not be fair to members to have non-members influencing the course of the society, non-members will have no further input to the way in which UKRS conducts its business on behalf of its members.

As is normal in these circumstances, colleagues who wish to join the society at this early stage may now do so if they wish. In recognition of their early commitment, those who join before the Certificate of Incorporation is received shall be known as "Founder Members" and that status will be reflected in their Certificate of Membership and throughout their membership in such others contexts as may be appropriate.

There is, of course, no reason why any member should commit to joining until he has had an opportunity to study the society's Memorandum and Articles of Association and no-one is authorised to persuade anyone otherwise. I am asked to confirm too that the only persons authorised to speak on behalf of UKRS at this time are Michael Mansfield (G2SP) and myself.

Those of you who have already declared your intention to subscribe as soon as UKRS is willing to register your membership should please note that your signature on a Membership Application form will be required. Such forms are available from the address below. Whilst by no means obligatory, it would help considerably if those sending for a form would please enclose a stamped, self-addressed envelope (9" x 4.5" minimum).

For those of you with printing facilities, an acceptable substitute has been uploaded in ASCII format to the UKRS topic of the CLIVE database in GB7OAR (file 11). It should be available anytime after 1800hrs today, 20th March 1996. Please feel free to print it (without alteration please) and use that if you find it easier. It must, of course, be returned with your subscription by landmail.

The file may be downloaded by sending an 'sp' addressed to CLIVE @ GB7OAR, with the one-word subject line REQUEST. The rest of the message should then be entered as follows, with each command on a separate line as shown:

TOPIC UKRS
SELECT 21
DOWNLOAD
NAME Yourname (If you have not used CLIVE before)
WHAT (If you want a list of other UKRS files)
BYE
Ctrl-Z or /ex

All subscriptions will be promptly acknowledged by a formal receipt issued in the name if the society. Membership Certificates and other relevant documents will be forwarded in due course.

May I take this opportunity of recording my very real gratitude for the constructive comments and suggestions which so many of you have sent to me. Our ambition now is to help UKRS grow so that, whilst remaining firmly under your collective control, it can become an organisation of trustworthy influence.

While I am able to influence its course, it will be my personal goal to ensure, so far as I am able, that UKRS meets the high expectations which we all share for it. We must have no illusions, however, that this can be achieved without your help. I shall try to ensure that your membership of UKRS is a pleasure rather than a burden but such high standards cannot be achieved by a few of us in isolation. UKRS will always need an input from its members and I can only hope that you will feel able to support its efforts on your behalf with the same enthusiasm you have shown for its creation ....

Please see also the bulletin entitled "As promised .... UKRS :-)" which contains further details.

Best wishes - and sincere thanks.

4086. famous hams

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <827779282.6105@skypilot.demon.co.uk>
Source record: 228859

List of 'famous' hams

7L2NJY Dr Mamoru Mohri, Japanese astronaut
9K2CS Prince Yousuf Al-Sabah
9N1MM Father Marshall Moran, missionary (SK)
A41AA Qaboos Bin Said Al-Said, Sultan of Oman
EA0JC Juan Carlos, King of Spain
FO5GJ Marlon Brando aka Martin Brandeaux, actor
G2DQU Lord Rix (formerly Sir Brian), former actor and charity head
G3TZH Tony Dolby, brother of "the" Dolby
G3YLA Jim Bacon OBE, weatherman
GB1MIR Helen Sharman, astronaut
HS1A Bhumiphol Adulayadej, King of Thailand
I0FCG Francesco Cossiga, former President of Italy
JA5FHB Japanese Minister for Transport and Communications
JY1 King Hussein of Jordan
JY1NH Offspring?
JY2 Queen of above
K0HWY Tex Beneke, band leader
K1OKI Mickey Schulhof, head of Sony US
K2HEP John Sculley, CEO of Apple (lapsed)
K2ORS Jean Shepard, author
K4LIB Arthur Godfrey, TV performer (SK)
K6DUE Roy Neal, television reporter
K7TA Clifford Stoll, author & scientist
K7UGA Senator (US) Barry Goldwater (sk?)
KB2GSD Walter Cronkite, news reader
KB6LQR Jeana Yeager, Voyager '86 pilot
KB6LQS Dick Rutan, Voyager '86 pilot
KB6OLJ Paul J Cohen, mathematician
KC4OCA Gordon Barnes, weatherman
KD6BUP James Treybig Jr, son of W6JKV?
KD6OY Garry Shandling, comedian
KG7JF Jeff Duntemann, author
LU1SM Carlos Saul Menem, President of Argentina
N4KET David French, CNN newsman (K4... ?)
N4RH Ralph Haller, FCC PRB chief
N5YYV Kathy Sullivan, Chief Scientist NOAA (former astronaut)
N6FUP Stu Cook[s], baseball player
N6GGM Laura, XYL of N6FUP
N6KGB Stewart Granger (born James Stewart), actor
N6YOS Priscilla Presley / Lou Lou Beaulieu, actress (any relation?)
NK7U Joe Rudi, baseball player
ON1AFD Count Dirk Frimouth, Belgian astronaut

S21A Head of Bangladeshi PTT
SU1VN/P Prince Talal of Saudi Arabia
SV2ASP/A Monk Apollo
U2MIR/UV3AMMusa Manarov, cosmonaut
UA1LO Yuri Gagarin, cosmonaut (SK)
VK2BL Graham Connelly, radio announcer
VK2DIK Dick Smith, entrepreneur & millionaire
VK2IG Dave Grey, Deputy Commissioner (???)
VK2KB Sir Allan Fairhall, politician
VK2YOW Bob Hughes, radio announcer
VR6TC Tom Christian, great**n-grandson of Fletcher Christian
VU2RG Rajiv Gandhi, Prime Minister of India (SK)
VU2SON Sonia Gandhi, XYL of VU2RG
W0ORE Tony England, astronaut
W2TQ Joel Miller, IEEE lawyer
W3ACE Armin Meyer, US Ambassador to Japan
W4ZG Worth Gruelle, started Raggedy Ann and Andy
W5LFL Owen Garriot, astronaut
W6EZV General Curtis LeMay (SK)
W6FZZ Samuel F.B. Morse III
W6JKV James Treybig, CEO of Tandem
W6QHS President of California Microware
W6QYI Cardinal Roger Mahony
W6ZH Herbert Hoover Jr (son of ARRL Pres, grandson of US Pres)
W8JK John Kraus (astronomer?)
WA2MKI Larry Ferrari, organ player
WA4CZD Chet Atkins, GUITAR PLAYER (alright! alright!)
WA4SIR Ron Parise, astronaut
WA6TJM President of ISD Inc
WA7WYV Andy Griffith, actor
WB4KCG Ronnie Milsap, singer
WB6ACU Joe Walsh, singer
WB6RER Andy Devine, actor (SK)
WD4SKT Donnie Osmond, entertainer (?)
K0HWY Tex Beneke Band Leader
K2ORS Jean Shepherd Author
K4LIB Arthur Godfrey (SK)
K4ZVZ Paul Tibbets Pilot (A-Bomb)
K6DUE Roy Neal Newsman
K7UGA Barry Goldwater Senator
KB2GSD Walter Cronkite News Anchor
KB4VJG Tommy Tucker
KB6LQR Jeana Yeager Pilot-Voyager
KB6LQS Dick Rutan Pilot-Voyager
KD4WUJ Patty Loveless Singer
KD6OY Gary Shandling Entertainer
KI6M Stu Gilliam Entertainer
KN4UB Larry Junstrom Musician
N4KET David French Newsman
N6FUP Stu Cook Baseball Star

N6KGB Jimmy Stewart Actor
N6YOS Priscilla Presley Actress
NK7U Joe Rudi Baseball Star
W3NOD Jacob Beser Electronics Specialist
W4WRO Emory Gordy Jr. OM of P. Loveless
W6EZV Curtis LeMay General (SK)
WA3VJB Paul Courson
WA4CZD Chet Atkins Singer
WA7WYV Andy Griffith Actor
WB4KCG Ronnie Milsap Singer
WB4KVB Paul Yandell Musician
WB6ACU Joe Walsh Singer
WB6RER Andy DeVine (SK)
WD4SKT Donny Osmond Entertainer
WP4CO Jose Feliciano Singer

Several lists have propagated through the amateur community from time to time
often with errors. For example, some lists claim N6KGB was actor Jimmy

Stewart, when the call was really held by another well-known actor: Stewart
Granger (whose real name was James Stewart, and who became a Silent Key in
1993). Many lists claim that Russian cosmonaut Yuri Gagarin was a ham (some
lists even claim his call was UA1LO); there is no hard evidence that he was
ever licensed. Another rumor insists that musician Jon Bon Jovi is a ham. He
is not licensed but his cousin, record producer Tony Bongiovi, is KX2Z.
Other lists indicate that musician Jose Feliciano is a ham; WP4CO's name is
definitely Jose Feliciano, but he's not the famous musician. Donny Osmond
was once licensed as KA7EVD, but his license has expired - another Donald
Osmond holds the call WD4SKT, but it's not the same person. KD6OY insists
that his name is really Garry Shankling, not Shandling, even though he lives
in Los Angeles. And WA7WYV's name is indeed Andy Griffith, but he's never
played either Andy of Mayberry or Matlock on television.

Royalty
Juan Carlos I de Borbon y Borbon, EA0JC, (1938-), King, Spain
Bhumiphol Adulayadej, HS1A, (1927-), King, Thailand
Hussein I, JY1, (1935-), King, Hashemite Kingdom of Jordan

Political and Religious Leaders
Francesco Cossiga, I0FCG, (1929-), President of Itally
Barry Goldwater, K7UGA, (1909-), former U. S. Senator (R-Az)

Radcom April 1996

Stop the Knocking

I have noted in recent weeks the proliferation of anti-RSGB diatribe on the packet network. I know members will say this has been going on for years. But recently it seems to have become most fashionable to knock the Society and its work at every given opportunity. It must be extremely frustrating for the perpetrators that the Society does not respond in a similar vain.

To take one example of the criticism aimed at the Society , I recently read that the Society fails to take account the views of its members. Nothing could be further from the truth. Over the past two years the Society has held a number of regional meetings up and down the country. These meetings where open to both members and non-members, and gave detractors the ideal opportunity to put forward their views. With out exception theses meetings were very poorly attended. At most of the large rallies and events we attend there is always a chance to take to task members of the HQ team, myself included, and members of Council and the volunteers Committees. Most people who take the time to talk to us are most supportive of the work of the Society.

I think at times members and non-members of the Society forget that the vast majority of the work carried out by the Society on behalf of the amateur radio community within the UK is done by volunteers. Over 2000 people work on a volunteer basis for the Society. Without the efforts of these dedicated people, amateur radio would have sunk without trace years ago.

All of us that hold a license and enjoy our hobby own them a debt of gratitude

for their efforts. They certainly do not deserve the level of criticism aimed
them by a few mis-informed mischief makers who have put their views across on
the packet network, but do not have the courage to raise their views
face-to-face when given the opportunity.

Criticism of HQ staff is acceptable, because the staff and I are paid to
service the needs of the membership. However such criticism should not be on
packet network, because HQ staff - as professionals - are prohibited from using
amateur radio to reply. If we are failing in our duties then I would welcome
any constructive criticism in writing, back by facts and figures. That would
give me and the staff the opportunity to make any changes required to improve
the service.

Misinformed criticism is unproductive and serves no purpose other than to
create ill-feeling.I am sure that many thousands of amateurs are fed up as I am
at the rubbish put out on packet by a few operators who feel the network is
there solely to broadcast their views. Its time the knocking stopped, because
in the eyes of the general pubic it does nothing to enhance the reputation of
amateur radio which is already suffering enough from "external" sources.

By Peter Kirby G0TWW General Manager.

4088. facts and figures on uk ham radio

Newsgroup: rec.radio.amateur.misc

```
UK/USA Amateur Radio Figures 1995
================================

Population No of Hams Increase/ decline
UK 1994 60,000,000 62,000
USA 1994 250,000,000 631,600

UK 1995 60,000,000 60,000 -2,000
USA 1995 250,000,000 672,600 +41,000

UK 1 ham per 1,000 population
USA 3 hams per 1,000 population

Based on the USA figure we would have 180,000 hams in the UK.

UK/USA Radio Society Membership
==============================

1990 1995 Increase/decline
RSGB Membership 35,000 30,000 -5,000
ARRL Membership 156,000 172,000 +16,000

5,000 x 30 pounds means 150,000 pounds loss of income

The DSI report states 'The number (of radio amateurs is growing)
at a steady rate of 7% per annum '. This would mean we should
have a yearly increase of around 4200 here and that is not hap
pening instead we have a 3% fall.
Figures supplied by the dti Radiocommunications Agency

RSGB lose 7,000 members in 8 years

The highest membership of RSGB was 1987 with over 37,600 members
now it is down to 30,600 a loss of 7,000 members in 8 years.

The loss is about 1,000 members per year for the last 8 years
with a loss of revenue of 231,000 pounds (7,000 X 33).

RSGB membership figures taken from the RSGB Annual Report
=========================================================
June 1995 30,661
June 1994 30,916
June 1993 31,018
June 1992 32,416
June 1991 34,581
June 1990 35,225
June 1989 35,868
June 1988 36,809
```

June 1987 37,601

P.S. In the RSGB Annual Report Peter Kirby G0TWW RSGB General Manager
states 'Membership has shown a modest increase....'
news to me I thought 30,661 was a decrease from 30,916!
When asked the RSGB always seem to say the membership has
increased
its a pity the figures don't show that.

> young should be aware of the type of people with which they are
> planning to associate.
> Porn or not, hamfests in general do not present amateur radio in a very favorable light(or smell). I have been regularly attending hamfest all over the Southeast for the last 14 years and have never failed to come away wondering why I bother. Many 'fest have people selling everything from fruit (the non-ham variety) to used clothing. I can count on seeing at least 15 exhibitors who have obviously not had a bath in at least a week and whose wares consist entirely of broken 8 track tape players and CB walkie-talkies. I have taken my 8 year old son with me to hamfest since he was born in hopes that he would develop the same love of ham radio that I have, but I look around and think to myself "I'm going to get worried if this turns my kid on." I go home and tell myself that the people I meet on the air can't possibly be like the ones I see at the 'fest, though I am afraid that this probably not true. And no I am not talking about the "old farts" either. Though I am only 32, most of my best ham friends are 20 or years older than me. No, this is something that seems to span the generations. I guess my point is that porn or not, hamfest have for many reasons become cesspools that I am afraid may reflect our society and unforntunately amateur radio.

Seems pretty simple to me...When the tables are sold hand out a policy letter that says "NO PORN", if any vendors show up and try to sell porn related items ask them to remove it or leave....

There are enough book stores, magazines and mail order places if you just must have this stuff that we dont need to have it at hamfests also.

...hey event organizer....wondering what to do with that empty space that a seller of porn cd's isnt using anymore..try a live packet station, or maybe a club member working 10 meters, ATV, 6 meter, ...SOMETHING to show the clubs interests and the hobbies variety!

> 73 de Greg Raven KF5NWe had a problem at our Hamfest in Manassas, VA, last year when some
folks complained about the trash one vendor had on display. We had to
evict the guy.
Anyway, this year, in the material we mailed to everyone exhibiting at
the Hamfest we have put a notice, blessed by our lawyer, that lays out
what is not permitted at the Hamfest. We have told our exhibitors to
leave the adult, x-rated, etc., stuff at home; if they display it, they
will be required to leave and will forfeit their fee for booth space. Sad
that it has come to this as computers and ham radio are a natural

together. We are even banning martial arts stuff and weapons (had a guy selling AK-47's a few years ago -- where do people come up with this crap?).

4093. ARO's suck

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: clueless129@clubhouse.email.net
Message-ID: <9603252153.S152062467@clubhouse.email.net>
Source record: 228866

I must confess that at various times in my life I have toyed with the idea of becomming an amateur radio operator. Even went so far as to obtain a copy of the morse code and commence to memorize it. I always soon gave up with it as a waste of time. Listening to real-life hams I realized just how boring and empty your lives are. All you ever talk about is themselves and how much you paid for your equipment. Whats the sense in memorizing morse code when it is outmoded? Why force people to pass a radio theory test when they never build or fix their own equipment? All ARO's do is go down to their local store and tell the man behind the counter to give them the most expensive gear he has so they can boast on-the-air about how much it costs. When it breaks they just post an ad to rec.radio.swap and sell it to some unsuspecting dufus who thinks he is getting something that works and then they go out and buy something even more expensive to boast about. At least Hams only cheat each other and not honest people. I can respect CB'ers who are involved in community work and highway assistance. Hams are nothing but loosers. Who cares how many kilowatts of power you can run or how many countries you talk to? Its all "me....me...me" with you loosers. What a gaggle of clowns.

SWR is 2:1 across the 2m band and from 435mhz to
450mhz on the 70cm band.

1. Use good quality TV twin lead.
2. Strip insulation at the solder point for coax feedline.
3. Cut out and remove the 1/2" long notch N.
4. Feed with a length of 50 ohm coax and terminate with the
appropriate connector. Tape coax at feedpoint to the twin lead,
```

or use heat shrink, and make sure the joints are insulated from
each other.
5. Antenna may be sleeved inside 1/2" PVC for outside mounting or
hung on a loop of string run thru hole O.

I'd be very surprised if anyone could learn or improve their CW skills by watching a computer perform the translation. Programs like the one you're describing are generally used so the operator *doesn't* have to learn the code.

I agree - maybe writers of news client programs (such as Free Agent -
the one I'm using) could add kill file facilties to blank out articles
with rude words in them.

I suppose the only problem is it would kill articles with words such
as "Poshitridge" - a village near where I lived in the Midlands..!

This is off-topic but a thought anyway...

I haven't looked - are other newsgroups where the original article was
posted having this conversation? Nice bit of bandwidth and disk
storage used up if they are...

4111. XMLog Log/Packet freeware has moved.

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: michael.mcamis@valley.net
Message-ID: <4j4v8c$3t3@dartvax.dartmouth.edu>
Source record: 228912

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible set
of coordinated logging and packet features.

If you're using a Web browser, start at Boston Amateur Radio
Club's home page (http://www.acs.oakland.edu/barc.html), go
to the section "BARC FTP archives" and pick "FTP Archive",
then pick "Software Archives/PC Files". Select the "logging"
directory and fetch xmlog123.zip

For ftp users, sign on to ftp.barc.org with the userid
of anonymous and a password of guest. Move to the
pub3/hamradio/dos/logging directory and get xmlog123.zip

XMLog is now also available from ftp.funet.fi in Finland.
Sign on with a userid of anonymous and supply your e-mail
address as the password. Move to the directory
pub/ham/hf-log and get xmlog123.zip

The archives can be busy at times, don't give up if you
can't sign on right away. Let me know if you:
- want more info
- can't fetch the file
- want diskettes instead

Have fun...

Mike/WA3ECT

>I should think more radio amateurs speak Classical Latin than Esperanto!

ISTR a recent survey showed that more people now speak KLINGON than Esparanto.

I know of one radio amateur who speaks Klingon (G7LTT). Are there any others?

>(Morse Code is a perfectly satisfactory international language.)

Agreed - but CW's opponents fail to see it as a language, just as a means of encoding English.

That is the advice I have gotten from more experienced hams.
Ignoring them probably won't make them go away, but at least it
won't encourage them. And also, as a fellow new ham, I think
you picked a wonderful hobby. Don't let a few bad apples spoil
it for you. I've had nothing but positive experiences so far.

My experience is that people outside amateur radio are still generally
unaware of the dropping of the code requirement for the Technician
class license, even though it has been 5 years now. Folks just don't
know.

>If people don't know that those
>volunteers are hams, whose fault is that?

Um, possibly the ARRL PR volunteer? ;-) ;-) ;-)

<everything deleted in the interest of disk space.....>
<read backwards if you are interested....>

Gary,
Well that was 180 degrees out of what I expected. You just changed my opinion of you by 900 percent. You have been around for a few years longer than I have, I honestly can't remember what year I was first licensed, I think 70 or 71. Anyway we share some common activities. I was active on packet for about 5 years, ran a BBS and also a packet gateway on UO-22. Before that I was very active on HF, worked about 49,000 stations from here in Guam, and was active in my younger years in HF contesting.

I think what the code/no code debate all boils down to (I will admit I haven't seen much 'debate' worth reading) is that fact that ham radio is changing. I'm sure you can't honestly say you haven't seen a drastic change in the last 10 years... more drastic in the last few years since the new license structure was put into place. I know the no-code ticket was put into effect to let the 'computer' types into the hobby, in the hope that they would 'experiment on the higher bands'. Of all the no-code types licensed here in Guam (and I have to admit our ham community is very small) the most outstanding experimentation we have seen is the addition of a two meter repeater and a few simplex autopatches on two meters. I know of absolutly no hams here in Guam (new ones) that are interested in ANY aspect of the hobby other than two meter FM.

Ham radio, when I started, was dipoles in every tree in the yard, a room or basement full of home-brewed junk, and sitting up at nite listening for DX even though you knew you had to get up for work in the morning. It used to be when a new ham needed a dipole, an old ham would dig some wire out of the junkbox and show him how to build one. Now Gordon West sells him one for $ 89.95. I think a lot of the 'I'm for the code' guys are scared to death that ham radio as they knew it is dead. I think it is, but I can't fix it, and ham radio always was a HOBBY to me, so what the hell. All the name calling in the world isn't going to fix it.

People just don't see the 'big picture'.............. Ham radio is a BUSINESS. And to sustain any business, you need CUSTOMERS. Remember when you used to get a DXCC list from the ARRL for free ? Now they sell you one for 2 bucks (and if you live in Guam they mail it surface mail to save 3 cents and it takes 3 months to get here). I passed my novice test because some guy up the street with a basement full of junk and a backyard full of wires took the time to

help me. I didn't buy any video tapes for $ 79.95 on how to become a ham. Remeber Dick Bash ? The ARRL raised HOLY HELL about what he was doing when he started putting together the Bash Book. Now they will SELL you all the answers to any test you want to take.

I also see a lot of what looks to me like the 'something for nothing' syndrome. I really think a lot of the no-code stuff stems from the fact that a lot of Americans think the world owes them something for free. My mother always told me that when you get something for free, you get what you paid for......

Anyway Gary, I don't see no-code tests in the future. I see no-test licenses. Everybody who is making money wants more. So they need more customers. KMART sure isn't giving tests to get in the front door, and before long I doubt ham radio will be either.

All the screaming and yelling isn't going to fix anything. But I really think you should be a bit more 'gentle' with the new guys. If the guy who originated this thread loves CW, then let him love it. Our opinions differ dramatically on the CW point anyway, to me Morse code is another language, to you it's a nobrainer.... but I guess we are both entitled to our opinions....

: need to be written.

: Any thoughts or ideas?
: Jack.

Jack, there's a ton of hardware been around for years to copy morse code.
Most of the newer packet TNC's will do it too. No amount of hardware
piled up on your desk connected to the radio is gonna make YOU learn
Morse code. You have to do that with the grey stuff between your ears.
It's like going to the proctologist, Jack. The sooner you do it and get
it over with, the sooner you will feel better. Stop looking for an easy
way and start doing it the hard way, like everybody else..... you may
be pleasantly suprised that it's not near as bad as going to the dentist.

>me please let any clubs sponsoring hamfests that you dont agree and ask
>they dont allow any vendors to sell this at a hamfest.

S>We need to represent ourselfs in good faith not just to the young and
>future hams but also our community.

Well, if clubs are going to charge $6 and up for admission to hamfests,
there are few children, kids and even adults that will go. I,
personally, will not attend any hamfest that charges over $5. I have
made this a hard and fast rule and I would like to see others do it too.

The way things are now, I doubt that any kids will be willing to spend
big bucks (to them) just for the privilege of looking at tire rims and
porn tapes!

>lifetime to *gain* Phd expertise.

Okay, let's say for a second that I agree with you here. Why then:

1. Do I hear questions about "how do I build a dipole" ?

2. Why when a woman mentioned that her radio was "getting hot"
and someone suggested she check her SWR she replied "you know
I don't know anything about that stuff".

While perhaps your statement above may be true, you certainly must agree
that the existing testing system does not ensure that people have a
sufficient level of technical expertise.

Okay, granted that perhaps the two examples I mentioned are the exceptions
to the rules. But I can turn on my radio almost any day and hear the same
type of questions, even from some people who have been licensed for years.
This would tend to contradict your last statement regarding a lifetime
learning process.

I don't profess to know everything about electronics and RF, but at least
I have a copy of my ARRL Handbook around so when the time comes to build a
dipole, I can easily look up the formula that I once knew for my test and
have long since forgotten.

>movement rather than a "top down" league decision, it was
>becoming clear the FCC was going to wait to hear from the ARRL.
>the ARRL proposal was crippled and quite properly not just taken
>verbatim as a rule making.

Wrong, entirely. It is not even correct to say the no-code
movement was initiated and had support by a strong grass-roots
contingent. Certainly, some amateurs supported such a change.
However, the reason for FCC's statement in the late 80s that
there was "a change in amateur sentiment" to bring on a no-code
license (after amateurs had turned down no-code by a 25:1 margin
in 1982), had to do with its 1982 defeat, and the following
statement from an FCC official:

"Because amateurs have opposed the no-code license, the
Commission can no longer guarantee that frequencies in the
VHF/UHF spectrum will not be in jeopardy of being lost."
--Former PRB Chief Robert Foosaner, ARRL National Convention, New
York City, 1984.

Thus, if you wish to state that the Commission applied an undue
degree of pressure on amateurs and the ARRL for a no-code
license, one would tend to agree. But "the change in sentiment"
did not come from the heart and soul of those in the Amateur
Radio Service clamoring for a no-code license. On the contrary,
the evidence indicates the FCC led the move towards a no-code

license, going all the way back to Ray Kowalski's efforts in the early 1980s.

>>Ultimately, FCC overturned a part of that decision, which was

>vince, you _do_ understand that the FCC runs the amateur radio
>rulemaking process...that the League is only a contributor to
>it?

In the case of bringing on a no-code license, definitely. Otherwise, generally NO. That's because the stock-in-trade, bread-and-butter statement found in a multitude of FCC Report and Orders is as follows:

"By and large, the Commission's conclusion (to grant or deny said petition) is based on the views that the Amateur community has shared with us over the years, generally in a rule-making context."

The above statement essentially says that the Commission will go along with the wishes of the Amateur Radio Service, i.e., in particular, the representative body of the Amateur Radio Service, the ARRL, whenever possible. It was indeed rare for the Commission to part hairs on an ARRL petition concerning the frequencies under which said petition would take effect. But this is one proposal the _FCC_ wanted, not necessarily amateurs nor even the ARRL. Nevertheless, the ARRL surrendered. I believe a major reason for that goes back to a 10-to-15 man NARA group, and their influence with Ray Kowalski. ARRL could not afford to have a small contingent prevail over the 135,000 member League. As for choosing 144 MHz, we now know that the FCC had plans for the 220 MHz band.

>>initially intended for amateurs operating ABOVE 144 MHz. The
>> passage of no-code was pushed through, in my opinion, in less
>> than an honorable, democratic fashion. Not that no-code has
>> been

>yeah, all those letters to the FCC and the other mags didn't
>count because the decision wasn't made at the league first, huh?
>lemme check here again, they have something like 175,000 members
>and there's 750,000 plus hams? the league needs to get serious
>about recruiting...

Actually, the decision WAS made by the League. If you attended the Dayton Hamvention in 1989 and kept close to members of the BoD, you know that the decision had already been made. But even if you did not attend Dayton, simply read the aforementioned minutes of the meeting, where the BoD took several hacks at the proposal to arrive at one that would be acceptable to all. That again clearly indicates that going in, the decision had already been made to get the proposal through. Essentially, membership was saying: 'no, we do NOT agree with the ARRL proposal for no-code.

Formulate another proposal and we will consider it.' Instead, the
BoD decided they weren't going to do that. There was no reason
to rush to judgment.

>>that." The story has changed now, hasn't it?

>well, if the international rules change, then yes, our domestic
rules should change.

I believe you've got the tail before the horse. The ARRL often
assumes a leadership position in issues such as these. It would not
be unusual for a change in treaty to be spearheaded by ARRL. Under
those circumstances, it would be fair to conclude that Amateurs
were led down the garden path in accepting the no-code VHF
license to begin with.

>>"The Morse Code issue has little to do with whether it gets
>>through when other modes do not, whether it is a useful mode or
>>not, or whether hams should 'pay their dues' as their
>>predecessors. The issue involves whether this Service should

>>be a durable beast."
>> --Former ARRL President Vic Clark, 1982

>so Vic Clark was taking a defeatist stand here - effectively
calling for a mercy killing.

Far from it. Vic Clark, an electrical engineer by trade, knew
EXACTLY what was going on at FCC back in the early 80s. And
that's what prompted his statement in 1982. Unfortunately,
the good Lord did not give him enough time to do anything
about it.

>>Without meaning to take an adversarial position, theory exams
>>were long ago eased, starting with the publishing of the EXACT
>>questions and answers for all ham exams. It wasn't always that
>>way, and is the prime reason ARRL threatened court action

>be public, they're public. and we had 50% fail rates at the last
>test session...explain to me about how publishing all the
>questions and answers makes for a no-fail scenario at the
>exams...

The ARRL HAS options. Constitutional law states that one cannot
stop the publishing of exact Q&A. But there is no law that
prohibits VE's from securing the right to modify questions, or

VEC's from generating question pools faster than they can be
published. As for the 50 percent fail rate, it simply shows
that our educational system may be in much worse shape than
is generally recognized. It appears to me you are saying,
'well, things are pretty bad....let's not fight it.'

>>What are we experiencing instead? Extra Class Amateurs who
>>never learned Ohm's Law, for one. Hams that still believe that
>>voltage, a fundamental unit of electricity, is a unit of force
>>or pressure.

>(what's funny is that the MEs get an electrical analogy in their
>hydro classes.) and it's called Electromotive Force and it's
>measured in Volts...no voltage differential, no current
>flow...humm..sure seems to be a lot of "water" based
>terms in use here...)

Actually, freshman physics courses teach what is even in the
ARRL handbook, and in the simplest terms: voltage is the WORK
per unit charge, needed to move electrons from place to place.
But the fact that it's in the Handbook, and the fact that ARRL
does produce some excellent texts, doesn't get it done because
the exam structure doesn't really demand that the applicant
understand even the BASICS of electrical law.

: >
: > There is no way the FCC can be given jurisdiction over the entire Internet
: >for the simple reason that nobody has the authority to give them that
: >jurisdiction.

: That's true. The FCC's jurisdiction stops at the border. But the FCC
: can cut off the internet at the border if they choose. We've already
: seen the German government insist that content be filtered at their
: border, and the FCC could do the same for the US border. That would
: have an enormous impact on the internet. Every posting and every piece
: of Email and every file and every data stream would have to be vetted
: by a gateway at the border before being allowed to cross. That would
: pose an enormous logistical problem to the net, one large enough that
: it could effectively kill the net as a worldwide entity for practical
: purposes. Most internet traffic crosses the US border, sometimes more
: than once, even if its ultimate destination is outside the US. Blockages
: at the borders would have the same effect as blockages of the coronary
: arteries, it could give the internet a heart attack from which it couldn't
: recover.

[sig snipped]

That's possible, but it's not the only possibility. As the German government
discovered, the Internet can be a very difficult beast to tame. While
having the US block traffic would hurt the net, it might not kill it. If
enough people outside the US decide to create new links to bypass the
blockage by avoiding the US altogether, the result would be that the US
would have effectively isolated itself from the rest of the electronic world.
Neither outcome is very happy, and probably not what the authors of any such
legislation would have in mind, but then politics never did have a whole
lot to do with either reality or helping people.

Good point. A couple of the local fests around here let kids under 16 in
free. I'd like to see more of that. It's a good way to get kids
interested.

>the hobby, in the hope that they would 'experiment on the higher bands'.

That was some people's rationale. I never expected the bulk of the new licensees to be avid experimenters, but I did expect to gain some (Sturgeon's Law), and that has come to pass. I have become close friends with several such experimenters over the last 5 years.

I expected most of the new licensees to be wet behind the ears beginners, and that turned out to be true as well. That's why I filed comments with the FCC opposing the ARRL plan to ghettoize the new Techs. I wanted them to be mainstreamed so that they would come into intimate contact with older and more experienced amateurs who would help and guide them in learning their way around amateur radio. Such socialization is essential if the character of amateur radio is to retain its better characteristics.

To a larger extent than I had expected that hasn't happened. And I must say that the bulk of the blame for that lies on the shoulders of the older amateurs. Too few have accepted the challenge of being mentors and good examples for the new licensees. Too many have approached the new licensees with a chip on their shoulders. Too many have striven as hard as possible to alienate the next generation of amateurs. And too many have attempted to run away and hide on closed repeaters, or retreat to HF to avoid their

responsibilities to the next generation of amateurs. You see their ilk posting in these threads all too frequently.

Of course the new licensees are not without fault either. Many are brash, some abrasive, some think they already know it all, much like teenagers trying to find their place in the world. But no one should have been surprised at that. It takes patience, and some skill, to deal with teenagers, and it takes patience and skill to deal with the new licensees. It isn't a task that I thought would be beyond the older amateur, but apparently for many it is.

Apparently the newcomers were expected to be in awe of the old timers, to look up to them as radio gods, but that's ridiculous. It was ridiculous in 1963, and it's still ridiculous in 1996. Fortunately during the last large wave of new licensees in the 1950s and early 1960s, older amateurs were as a whole more understanding and patient with those of us who thought our still wet licenses made *us* radio gods. I was blessed with a couple of real mentors who had almost infinite patience with me back then. They had a real job on their hands too, because I was *sure* I was a radio god, and was *sure* the old fogies didn't have anything to teach that I needed to learn. But gradually it dawned on me that they *did* know things I needed to learn. (It is emphatically not true that all you need to know is what you studied to get a license. That's only a beginning.)

I had hoped that situation would repeat itself again this time. I've certainly tried to be a mentor and friend to the new licensee. I make an effort to welcome them to the service, invite them to use my repeater, offer them help with their rigs, etc. Sometimes they don't seem to appreciate my overtures, but I don't let that discourage me. I remember how it was, and I just patiently keep trying. I've found that eventually most of them come around, and I find that I've accquired many new friends.

>Of all the no-code types licensed here in Guam (and I have to admit

>we have seen is the addition of a two meter repeater and a few simplex
>autopatches on two meters. I know of absolutly no hams here in Guam
>(new ones) that are interested in ANY aspect of the hobby other than
>two meter FM.

Have you tried to interest them in other facets of the service? I don't mean preach, I mean by approaching them with "hey, have you tried this neat thing, or that thing?", or "I've been having a ball doing this, would you like to give it a try?" And it really helps if you *listen* to them and learn what *they* might be interested in doing, and then helping them do it. You've got to be willing to let them lead once in a while, and be ready to catch them if they get in over their heads.

>a HOBBY to me, so what the hell. All the name calling in the world
>isn't going to fix it.

Amateur radio will never be what it was, those times are gone.
The fascination with Dx is lost on many of the newer licensees
who grew up on satellite TV, worldwide dialing, and the internet.
To them the world *is* a global village, and contacting a station
halfway round the world holds no greater thrill than contacting
one across town. They *expect* it to work, first time, every time.
To hold their interest, there must be some *substance* to the
contact, and that takes work on the part of both parties. It's all
too easy to make that cookie cutter contact and move on. It takes
real work to make every contact an interesting conversation,
especially when one party is on unfamiliar ground, and a little
bit self-conscious. It's all too easy to stick with the gang, to
hang in the hood, where you don't feel out of place or out of your
depth. So we see insular little cliques form on both sides of
the time in grade barrier. It is the more experienced operator's
task to break through that barrier.

>will SELL you all the answers to any test you want to take.

Ah, there you go again. I'm beginning to see that chip on your
shoulder grow into a redwood tree. I do not believe that *my*
ARRL is in it just for the money (and if I discover they are,
there's going to be some changes come election time). And I think
you're being overly influenced by what you read in the QST ads
if you think most new amateurs are buying those videotapes. I
don't see that, though frankly the videotapes aren't bad teaching
tools. I see many new amateurs taking advantage of club classes,
which may employ the videotapes as one of the teaching tools
that they use. The classes in which I've participated have been
lively affairs with a lot of questions of the "why" and "how" type
from the students. (Of course the instructors have to be *good*.
If they can't make the material interesting and relevant, the
class will be a dud.)

Yes, the question pools are public, the FCC requires that they be public, and I don't think that's altogether a bad thing. It exposes every question to peer review (I recall some really bad questions on my exam back when the FCC attempted to keep them secret, such questions wouldn't survive today). And it ensures that an already nervous applicant won't encounter any surprises when he takes the test. Many professional exams are also conducted from a public pool of questions, and there doesn't seem to be a problem with that. The only thing about the amateur pools that differs from those professional exams is the size of the pool. I do think we need to enlarge the question pools. When I took my electrical contractor's exam, the Q&A manual was 800 pages. I'd suggest anyone who can memorize that *deserves* to pass.

> I also see a lot of what looks to me like the 'something for
>nothing' syndrome. I really think a lot of the no-code stuff stems
>from the fact that a lot of Americans think the world owes them
>something for free. My mother always told me that when you get
>something for free, you get what you paid for......

Well I don't know about that. If someone wants to give me a new Mercedes, I'll drive it just as proudly as if I'd paid for it myself. I've said before that the value of a license lies in what it enables you to *do* every day, not in what you did once to get it. The latter describes the value of a sports trophy gathering dust on your mantel, not a tool that enables you to accomplish new things. An amateur license is a tool, it only has value if you use it.

> Anyway Gary, I don't see no-code tests in the future. I see
>no-test licenses. Everybody who is making money wants more. So
>they need more customers. KMART sure isn't giving tests to get in
>the front door, and before long I doubt ham radio will be either.

Perhaps, but I don't think so. Amateurs still have a large enough potential for harm that some knowledge will have to be required to make them accountable if they screw up. The biggest thing the licensing exam does is remove the excuse "I didn't know" from those who cause harm.

> All the screaming and yelling isn't going to fix anything. But
>I really think you should be a bit more 'gentle' with the new guys.
>If the guy who originated this thread loves CW, then let him love
>it.

I don't mind if they love it. I only mind when they make statements implying that there is something wrong with people who do not love it.

>Our opinions differ dramatically on the CW point anyway, to me
>Morse code is another language, to you it's a nobrainer.... but I
>guess we are both entitled to our opinions....

Well, I cannot bring myself to call an encoding of alphabet a
language. I don't call ASCII a language, I don't call Baudot
a language, and I can't call Morse a language. What the letters
any of them encode *spell* may be language, but the encoding
certainly is not. That's a fundamental confusion of medium and
message.

Nor can any reasonable entry exam system meet that criteria 100%.
Surely you know people who got through school simply by answering
present every day, blindly following directions, turning the crank,
but not having the slightest clue what any of it *meant*, and no
curiosity to find out what it all meant.

It's no different here. We try to screen the wheat from the chaff,
but no screen is perfect, there is always some amount of chaff that
gets through, and if we aren't careful, some amount of wheat that
is lost. We have to choose our screens with care to achieve a reasonable
balance. IMHO we can tolerate some chaff, it's just filler and doesn't
do any real harm, but we can't afford to lose much of the wheat because
it has real value. So I'd tend to set the screens a bit looser rather
than tighter in order to capture as much wheat as I can.

>Okay, granted that perhaps the two examples I mentioned are the exceptions
>to the rules. But I can turn on my radio almost any day and hear the same
>type of questions, even from some people who have been licensed for years.
>This would tend to contradict your last statement regarding a lifetime
>learning process.

As I noted above, some can turn the crank, but they don't know why it works, and they aren't curious enough to find out. The drive to learn, the drive to know "why", is an internal drive. We can't impose it from the outside, we can only cherish and feed it when we find it. There's no test for it except observation post hoc.

>I don't profess to know everything about electronics and RF, but at least
>I have a copy of my ARRL Handbook around so when the time comes to build a
>dipole, I can easily look up the formula that I once knew for my test and
>have long since forgotten.

So having the question on the test served no lasting purpose did it? Except maybe to make you aware that such a formula might exist. That's one reason I've advocated an open (reference) book exam. It shows the applicant knows how to *find out* what he needs to know when faced with a task requiring that knowledge. That's of much greater lasting value than regurgitating some numbers from turning the crank on a memorized formula that will soon be forgotten.

>

Hmmmm... so new directors are elected, resulting in the reversal
of an previous vote. The conspiratorial nature of the way that
Biancoman presents the situation is highly entertaining, but I
guess that we can only blame all those idiots who elected those
new Directors. We had better watch out, or there will be further
out-breaks of democracy. It would seem that Biancomano only trusts the
democratic process when the resultant views reflects his own.

By the way, as I last recalled, the ARRL position of the matter is not at
all definitive towards the final outcome of a rule making. Rather, they
are but one channel of input to the FCC who indeed make the final ruling
in telecommunications matter. The opinion of the ARRL no doubt carries
great weight, but if indeed there views were not reflected in the final
implimentation, then there must have been other factors that were
presented to the FCC which based on the evidence presented which had
greater merit than the one presented by the ARRL. I believe that in the
U.S. (and I stand to be corrected on this, please) the the decision on a
proposal is decided upon its merits, and not by counting all those who at
in favour or against a particular proposal. Oftentimes, one reasoned
arguement for a proposal will have greater weight than hundreds of
comments that just say "I want nothing to do with this, don't do this"
with little or no supporting argument. I believe that such
regulatory infrastructures ameliorate the temptation to succumb to the
herd instinct.

> Ultimately, FCC overturned a part of that decision, which was
> initially intended for amateurs operating ABOVE 144 MHz. The
> passage of no-code was pushed through, in my opinion, in less
> than an honorable, democratic fashion. Not that no-code has been

> that a no-code HF license might be the result. "Don't worry,"
> we were assured by ARRL officials. "International treaty prohibits
> that." The story has changed now, hasn't it?
>

Not having ever read the final rule making (please excuse my ignorance of the terms and documents published with respect to the regulatory infrastructure), it would seem to me that there must have been a submission on the proposal which carried greater weight. Thus the ARRL views were not adopted. With respect to the comment that the resulting decision was undertaken "in less than an honorable fashion", there is often the view that unpopular government agency undertakings are undemocratic because those adversely affected did not have the opportunity to individually consent or deny the action. But, determining the direction of the herd is but one factor in determining the appropriate outcome. Another democractic ideal is the "rule of law". If the decision by the FCC was lawful, in accordance with the enabling legislation, and was premised by the merits, then this decision was indeed a lawful, and democratic by the way, decision. Indeed, if the decision was taken to satisfy the whims of the herd, regardless of the the merits, such an decision would be undemocratic, and I believe open to reversal by the courts.

If I am mistaken in this view, I would heartely invite correction.

>

In the first place, Biancomano is a majority of one who believes that the call for the abolition Morse code testing goes hand-in-hand with the lowering of technical standards and competency in order to become an amateur. Althought he has been cited many times by others more elucid than I that his views bear little or no correlation, he persists in regurgitating his views. I suppose that there is no point in again stating that logic is a tad wanting. However, I will say this, I think that the technical competency demanded by the testing regime, bears faint resemblence to what is actually required to operate a modern amateur station. I will not repeat them here, Coffman's postings are much more erudite with respect to this concern.

> Without meaning to take an adversarial position, theory exams

> aren't being restored now to their former status indicates that
> the ARRL supports this deregulated format, i.e., it supports
> continuing the eased requirement format.
>

If Biancomano says that the technical examination standards have been watered down, perhaps he can elucidate what has been the deliterious result of doing so? Otherwise, its hardly relevant.

By the way, I believe that the publication of examinations is a requirement of Freedom-of-Information legislation, and FCC must undertake to have the question banks in the public domain. (To emphasize the point, it is called the "rule of law". Again correction is invited.) Therefore, if the question banks are inadequate, either quanitatively or qualitatively, perhaps Biancomano should volunteer his time to improve them or indeed increase the number of questions.

(snip, snip)

> equipment, learning by doing, which ultimately is the major reason
> for amateur radio.

No doubt, Morse code is rudementary, and since it plays such an overwhelming role in amateur communciations, in accordance with Biancomano's views, then mandatory Morse code testing is obviated. In contradiction to Biancomano's view, knowledge of Morse code does not foster discipline and it does not tends to encourage amateurs to build simple equipment. There are a small minority who do indeed build their equipment, but I daresay that the fact that they did (or did not) know Morse code had little to do with it. There are even more effective means of communicating without having to depend upon Morse code. The truth of the matter is that Morse code is Pavlovian condition - hear "di-dah" and you write down the letter "A" and there is no evidence that such knowledge encourages the individual to pull out a soldering iron and build a simple toy. To be somewhat controvertial - we should be encouraging amateur operators, not toymakers. If they wish to make toys, that is their business, but that should not be the objective of the certification system.

> The relationship between Morse Code and
> learning is subtle, but it's there for many who have come up
> over the years.

To the contrary, it is about as subtle as brick heaved through a window - it is a learned skill for which there is no evidence that supports the contention the this skill is vital in operating a modern amateur station. There are those who would like to have that skill. Go for it, but there is nothing to support the idea that Morse code is necessary skill in order to operate on the HF frequencies.

> There may be other ways to encourage discipline
> in the learning process, and learning by doing, but until something
> better comes along, there's no reason to eliminate the Morse Code
> in the Amateur Service.
>

Interesting, it would seem that Biancomano eschews the discipline necessary to have the technical competency to operate an amateur station, yet values above all Morse code skills. To reduce the arguement to its absurd, Morse code is the only valuable testing requirement and abolish the technical examination.

4140. Re: Low output with PK-232 and TS-440

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-25 00:00:00 UTC
From: dara@physics.att.com
Message-ID: <4j6kql$2i0@nntpa.cb.att.com>
Source record: 228941

There are two things going on here.
1. Low output power when driving acc 2 (13 pin connector)
2. Using a mic while connected to acc 2 wilth a data line

The reason for low output power is the acc 2 jack connects after
the mic preamp. The solution is usually to advance the mic
gain control from its normal 9pm position until you get full output.
Turn it pack down for mic operation.

You also should wire the 13 pin connector the way KAM recomends.
I would have to look in my manuals at home, but it has been written
up in QST. Essentially, you connect the data audio to a diffent
pin and connect to the normal pin through a diode. If you need
the pin info, send me mail at;

You're dreaming Stanley!

The insides of that radio is all miniature surface mount components.
There's nothing in there you could possibly repair without *very*
advanced equipment. Consider...

I opened mine last month with the intent of changing a resistor, fully
confident that the resources of Hewlett-Packard would be more than
enough (eg. anti-static tech station w/ microscope, micro-solder, etc.
and an engineer who does this kinda stuff for a living).

To our surprise, the standard size resistor in the radio was TWO or THREE
sizes *smaller* than the smallest resistor HP uses! That size isn't even
approved for new designs because our auto-place machines can't place them!
The other components are of similar scale.

So unless you have resources at your command that exceed Hewlett-Packard's,
you're gonna need to have someone else repair it.

Just remembered that I did indeed use AM. If using FM I think the best
system would be the Doppler system using two antennas spaced some
distance apart. The FM generated by switching antennas could be detected
by the FM receiver. Much of the electronics of the AM system would be the
same in the FM system. The main difference would be the antennas.

>is a great way to get the young interested in ham radio. I feel its
>a poor way to show what amateur radio is about.

I'm very tolerant of this stuff, and I still agree with you. At the
Orlando Hamcation back in February there were several CD vendors whose
displays showed far more than you'd see on the local beaches. I felt
uncomfortable about the kids present, even though I agree with Frank
Zappa's observation that it's a strange society that says it's okay
to see a character plunge a knife through a breast, but not okay to
see a character fondle one.

The stuff starts out segregated to the back, or in "adults only" piles,
but migrates out into plain view as the show goes on.

Of course, the argument that if it didn't sell, it wouldn't be there is
100% valid. And I'd rather see some sort of voluntary action rather than
another stupid law. Perhaps the answer is for the clubs to tell the vendors
to keep that stuff out of sight, and for those of us who care to tell them
when it is not hidden.

>If that infringes a little on your activities - fine. Stay home and
>watch it on television.

Baaa Baaa said the sheep. ACOG and Olympics International Inc. has
trampled US Law repeatly. If you do not like the idea of foreign control
over US citizens, you are really going to hate what they have planned for
you in the next 20 years. On the other hand, If you are just like Clint
I guess you are willing to give up your freedoms so as to >shine in the
eyes of the world.<

My job involves the Olympics, and I will do it to the best of my ability.
However, that does not mean I approve of the kind of high handed BS that
goes out of its way to recruit Hams as Radio Ops, but refuses to allow
those same people to enjoy there hobby, in the silly guise of extra security.
I guess I can say that, you see Law Enforcement and Security has been my
business for over 15 years. This is just another FEEL GOOD measure.

And yes Clint, I too kind of felt that as this event was occuring on US
soil it would be subject to US Law. I guess if most people in the US feel
like Clint, then they are ready for one world government.

A man much smarter than me said, Those who would give up freedom for
security, deserve nether. Sounds right.

4154. Chgo Area Ham Classes - Nov thru Extra

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-26 00:00:00 UTC
From: dreambig@ix.netcom.com
Message-ID: <4ja07j$68m@dfw-ixnews3.ix.netcom.com>
Source record: 228806

My idea is simply this --
ham radio classes see a lot of drop-outs
because the classes go on too darn long!
People have better things to do with their lives
than attend 6 to 12 weeks of ham radio classes.
I am looking for students and
sponsors for one-day license workshops.
If you know anyone interested in getting their
Novice ticket or upgrading to Technician,
General, Advanced or Extra, please
have them call me. I will teach a one-day
theory seminar & workshop for any
license level -- Novice through Extra.
I've taught ham radio to about 300 people
during the past 10 years from Novice
through Extra and always enjoy the excitement
in the faces in front of me.

What do I need to make this happen?
I am looking for a club that wants to sponsor
the workshops. The sponsoring club will:
1) provide a suitable room for an all-day seminar
and
2) get students lined up for the classes.

What will the club get in return for their effort?
Classes are a great source of new members.
Classes can also be an income producer
if the club wants to charge for them.
Keep the money as a donation to the club
or let that money pay for a one-year club
membership for the new ham.
My services are free to the club and the students.

Please call me if....
* Your club or repeater group is
interested in sponsoring a workshop
* You or someone you know is interested
in a one-day Upgrade Workshop
* You know someone interested in a
one-day Novice Workshop

Hello all.

I got my hands on a GE Master II UHF rig with remote console, interface, cable, external speaker, and mic...basically complete.

I am wanting to put it on 9600 baud packet, and am trying to gather any and all information about it. IE; watts, amp draw, pin out of console and mic, where to get crystals, value, and just ANY other info you may would be appreciated. A schematic for this rig would probably bring tears to my eyes. :)

Thanks much, & take care.

Yes, as Gary says there is such a beast. They are large (3' x 4') and can be had for $3.50 apiece from the US Govt. Printing office. You might check locally. I am in Cleveland and the USGPO has a bookstore right here that usually stocks the posters (although they have some on order right now).

I might also mention that Motorola has a similar poster, it's about 4' by 2', also quite detailed. I have one, but not near me right now or I'd pull the 1-800 number from it. They sent it to me free. You might have to do some legwork to find the number, but you might start with Motorola in Schaumberg, IL, just outside of Chicago. I'm sure directory assistance (708-555-1212) can give you a main number for the company, which in turn should be able to help you find the actual department (you might try asking for customer relations, or their PR/Marketing department).

Brian Peterson posted about the big poster you can get from the USGPO called "United States Frequency Allocations - The Radio Spectrum".

I did some checking. For example, Cleveland has a USGPO bookstore. They are out of stock on the poster, but they knew of it's existence. They will be ordering up some more (they said they'd even call me when they come in). And, they are only $3.50 apiece. Since they were out of stock, they were not able to look at one and tell me a printing date. Hopefully they are newer than 1987, as Brian observed. The guy on the phone said that they are folded up, but that they are also quite large when you unfold them.

So, if you are near a med-large metro area, look up US Government Printing Office in the blue pages of your phone book, there may be one right in your back yard instead of checking with the main office in D.C.

Mike

Well,

After looking into various makes/models over last weekend, we are going to opt for a `94 Camry or Accord, then get a older truck when we need to do some towing.

Any comments on the Camry??..

From: pacrimgolf@saba.kuentos.guam.net
Message-ID: <4j8fff$e1n@lehi.kuentos.guam.net>
Source record: 228818

I've been reading the amateur radio newsgroups for the last few weeks
and so far, this is what I have learned:

1. Some people don't like anyone who likes CW.
2. Some people don't like anyone who doesn't like CW.
3. Some people don't like the FCC.
4. Some people don't like Contests.
5. Some people don't like anyone who likes Contests.
6. Some people don't like QRP.
7. Some people don't like anyone who likes QRP.
8. Some people don't like HF amplifiers.
9. Some people don't like anyone who likes HF amplifiers.
10. Some people don't like U.S. made equipment.
11. Some people don't like Japanese made equipment.
12. Some people don't like the U.S. testing procedures.
13. Some people don't like No-code Techs.
14. Some people don't like people who don't like No-code techs.
15. Some people don't like pornography at hamfests.
16. Some people don't like hamfests.

And finally, one guy doesn't like ANYBODY who's a ham. Which leads
me to my first question:

Is there ever any discussion of anything that anybody DOES like
in these newsgroups, or are they basically used by people who
are looking for an output to vent frustration about things they
don't like ?

I am also rather new to the internet, which leads me to my second
question. I seem to notice a senario for the 'I don't like'
messages. Person A posts a message 'I don't like ... whatever'.
Person B reads the message, and as he disagrees with the orginal
message, and wishes to maybe discuss, debate, whatever, the
topic with person A, he responds. Upon responding to person A,
person B immediatly receives a keyboard lashing from persons C,
D, E, F, etc. but for some strange reason, person A never
rejoins the discussion. I will admit I have seen a few back and
forth discussions between certain individuals, but I seem to
see more of above mentioned senario. So my question. Did person
A just write the original message to 'stir up the pot' so to
speak ? Is this standard internet operating proceedure ?
Is this a replacement for Radio Fun while the HF bands are dead ?
Is there anywhere I can go to read things about Ham Radio that
other people DO like, maybe I'm in the wrong newsgroup ?

Message-ID: <31586BD8.21FC@ideanet.doe.state.in.us>
Source record: 228819

The Standard is great for the following:
1) Makes a great wireless mike for a dual-band mobile in cross band repeat.
2) Makes a great little scanner - small and light and nearly invisible with an earplug.
3) Makes a great dual band HT for use at hamfests for local communications
4) Makes a great radio for use if you live within site of a repeater site.

It probably should not be your primary HT. The range IS limited by the power out and the antenna. Other than that it is a rugged rig that if used within the above constraints performs very well.

>according to FCC Part 97?

No, he is not broadcasting. In amateur radio, broadcasting is defined as "Transmissions intended for reception by the the general public." Put away Webster's dictionary - the only definitions that works for this question is what is in 97.3(a)(10).

In general, one way transmissions are prohibited by 97.113(b). However that section provides for exceptions that are allowed elswhere in the rules.

97.111(b)(2) eliminate any question about whether calling another station is considered a prohibited one-way transmission. It may be a one-way transmission, but it is permitted.

Station identification is a permitted one-way transmission. The ID requirements of 97.119 still apply, even if no two way communication was established with another station.

>If it is not broadcasting in the
>legal/technical sense, is the Ham following good operating practice?
>Please discuss thoroughly and provide examples and references - have
>fun!!

Sounds good to me - but then "good amateur practice" is often a subjective thing. He called another station - the station did not answer - he gives his call and says "clear", indicating to other amateur stations (not the general public) that he has completed his call and is "clearing" the channel so someone else can use it.

Some will argue that "clearing" is not necessary. On a quiet repeater maybe not. On a busy system, "clearing" the channel leaves no doubt to others that channel is available.

This was too easy... There has got to be more to this request for input.

I worked a (probably) slim on 20 yesterday and wondered if anyone has more info. The station was signing XV1A and claimed to be in Vietnam with a QSL manager of UA0FM (whom I believe is also 3W5FM ?) From Texas, the station was about 55 beaming toward Vietnam and about 15 - 20 db over S-9 when beaming toward Russia! This was at 0002 UTC on 3-26 UTC. There was a list taker (AC6BO) and this was on 14.203.

It sounds like one not to waste a QSL on, but anyone have more info?

I have an Icom IC-730 HF rig powered by a Pyramid 30A power supply. I have just acquired the MFJ-1621, an indoor/portable antenna with built-in tuning system. I am having a problem however.

On most bands, especially 20M, if I try to key the transmitter the transceiver dies completely, just as though the power were shut off. Further, the power supply meters all go to zero. The only thing on the whole system that works is the power supply power light. :)

The only way to get anything back to life is to cycle the power on the power supply...

I suspect that this is some sort of RF feedback problem - throwing random lengths of wire on the transmitter ground lug does some to help. Does this sound like RF feedback, or something else? What solutions do you recommend? Thanks in advance...

4181. Albany, NY SAREX Contact Rescheduled

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-26 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ZjBrlBN.sanderman@delphi.com>
Source record: 228833

FOR IMMEDIATE GENERAL RELEASE Page 1 of 3

Preparations are nearly complete at Bethlehem Central High School for Friday morning's scheduled amateur radio contact with space shuttle astronaut Kevin P. Chilton. Several students at the Delmar school have already been through a "dress rehearsal", readying their questions for the Atlantis Commander.

The question and answer session has been planned for nearly three years by members of the Albany Amateur Radio Association in cooperation with NASA, the American Radio Relay League, and school officials. Bethlehem senior Geoff Phillips, himself a ham radio operator, suggested the contact to school's science department.

Four of the six Atlantis astronauts are also ham radio operators. Commander Chilton will use the same ham radio equipment aboard the shuttle to talk to the students that was used to establish communications with the Russian Mir space station and coordinated the docking of the two spacecraft over the weekend.

Technical preparations at the school are also approaching completion for the contact, which has now been re-scheduled for 6:58 AM Friday. A sophisticated amateur radio station, complete with computerized tracking equipment which automatically points an array of specialized antennas at the shuttle as it passes overhead, has been set up in the school's library.

Unlike last summer's Shuttle Amateur Radio EXperiment contact at the Schenectady Museum & Planetarium, this operation will use direct air-to-ground communications with Atlantis. David Jones of Albany, who is coordinating the technical issues for this

"SAREX" contact, notes that the Schenectady effort involved a telephone and satellite link as the shuttle flew over South Africa. On this mission, Atlantis will fly nearly directly overhead.

But as the Atlantis crew works on its mission objectives in space, its the amateur radio and educational aspects of the flight that seem to be attracting a lot of attention here on the ground. Several hams from the Bennington area, members of the Southern Vermont Amateur Radio Club, have been assisting Jones with assembling equipment and coordinating operations with NASA.

It's a rare opportunity for students to get a first-hand, hands-on experience with the space program. The mix of space travel and communications involve facets of mathematics, geography, astronomy, physics, computer science, and the communications arts.

And excitement at the school is increasing as the time approaches. The national news service "This Week in Amateur Radio", which originates from the Albany area, will carry the student's questions and astronauts answers live via satellite to hams across the US and Canada. WA3NAN, the ham station at the Goddard Space Flight Center in Greenbelt, Maryland, will transmit the contact worldwide on "short wave" frequencies. A UHF radio link from the school to a ham station in Stillwater will facilitate regional and national "broadcast" of the contact.

From Stillwater, the signal will be sent to a satellite uplink station near Knoxville, Tennessee and back to the Albany club's repeater in the Helderbergs. Locally, ham radio enthusiasts and scanner listeners can listen in on 145.17 and 145.19 MHz.

The Shuttle Amateur Radio EXperiment is sponsored by the American Radio Relay League, of Newington, Connecticut, AMSAT - the Radio Amateur Satellite Corporation, and NASA, and supported by the Federal Communications Commission.

END END END

Stephan M. Anderman, WA3RKB
ARRL Public Information Coordinator, Eastern New York Section
email: sanderman@delphi.com
packet: WA3RKB @ WA2UMX.FN32AW.ENY.NY.USA.NA
phone: 518/664-6809

Note: The contact will be carried in the Albany area on the Albany ARA KM2H repeater on 145.19 MHz and on the Troy ARA NY2U repeaters on 145.17 and 444.225 MHz. In addition, it can be heard throughout North America on the Anik E-2 commercial communications satellite at 107 degrees west longitude, transponder 18 (9B vertical), 5.8 MHz wide-band analog audio. As noted in the release, WA3NAN plans to air the contact on their usual HF frequencies. Coverage is now scheduled to begin at 6:40 AM EST on Friday, March 29th.

4182. Re: Ham Fest or Porn Fest

Newsgroup: rec.radio.amateur.misc

From: howard.watson@jamesbbs.com
Message-ID: <9603280015301714@jamesbbs.com>
Source record: 228834

GC>Apparently, lots of radio amateurs buy it, otherwise these vendors
GC>wouldn't bother showing up. Perhaps that tells you something about
GC>radio amateurs you didn't want to acknowledge, but there it is.

Ahh, a seemingly valid point, but NOT true <G>. Every hamfest I have been to has had a truckload of non-hams there just to rubberneck and to look for the computer stuff. I've had a few tell me that they go to all the hamfests just to buy the cheap software (including the porn).

GC>Others have complained that the presence of computer equipment
GC>vendors at hamfests doesn't have anything to do with amateur radio.
GC>But their numbers too are growing, and they wouldn't be there if the
GC>equipment wasn't selling.

As are the numbers of non-ham attendees. Good for the pocketbooks of the vendors? Yes. Good for the club coffers? Yes. Good for ham radio at large? I truly doubt it. I go to hamfest for the same reason, to see ham equipment. I will admit that I am merely voicing my own sentiments. If the majority of my club wanted it that way, I would go along with it. I am actually quite easy to get along with <G>.

GC>I don't particularly like the image that this creates for amateur
GC>radio, but it is unfortunately a reality. It shows that a mostly
GC>male, mostly middle aged, mostly white group of asocial loners has
GC>a rather large subset who like to look at dirty pictures. I'm not
GC>sure that this should be hidden from potential amateurs. Perhaps the
GC>young should be aware of the type of people with which they are
GC>planning to associate.

I very much think that this is also changing. More and more young hams are entering in, and the other demographic aspects are also becoming more variable. I think that the so called fat, white, middle age ham stereotype is becoming more and more a thing of the past.

JM>but permit those other non-ham ventures involving knitted dolls,
JM>hunting knives, etc., etc.
JM>
JM>If you can figure out how to do this, my hat's off to you.

For the record <G> Here's one vote for NOT coming up with such a rule. I still hold that hamfests are for ham items, not for dolls, knives, etc. That is what regular flea markets, gun and knife shows, and craft fairs are for. IMHO for what its worth <G>

KM>I view ham radio as providing very little in *real* public service.
KM>Those days are far in the past. Parades and track meets, etc. went
KM>on perfectly well before we developed 2m FM.

Nahhhh, no flames from here <G> BUT, a point......Your point is well taken and valid...to an extent. Parades and track meets, etc went VERY well before ham radio. They also went well before computers, satellite weather reports, laser timing, and so on. These things DO make them more enjoyable and make things easier. That is what I feel my contribution is when I assist in a public service event.

4185. Radio Classes in Chgo - Nov/Tek/Gen/Adv/Xtra

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-26 00:00:00 UTC
From: dreambig@ix.netcom.com
Message-ID: <4j7tdn$65e@cloner3.netcom.com>
Source record: 228869

So the printer said ....
"What's the big deal --
It's only one letter off!"

They are nice cards - just the wrong callsign.
So I asked myself "What can I do with all these
QSL cards that are 'almost' right?"
And then it came to me -- turn lemons
into lemonade and send them out anyway
to introduce myself and my
"one-day license seminars" to other hams.

My idea is simply this --
ham radio classes see a lot of drop-outs
because the classes go on too darn long!
People have better things to do with their lives
than attend 6 to 12 weeks of ham radio classes.
I am looking for students and
sponsors for one-day license workshops.
If you know anyone interested in getting their
Novice ticket or upgrading to Technician,
General, Advanced or Extra, please
have them call me. I will teach a one-day
theory seminar & workshop for any
license level -- Novice through Extra.
I've taught ham radio to about 300 people
during the past 10 years from Novice
through Extra and always enjoy the excitement
in the faces in front of me.

What do I need to make this happen?
I am looking for a club that wants to sponsor
the workshops. The sponsoring club will:
1) provide a suitable room for an all-day seminar
and
2) get students lined up for the classes.

What will the club get in return for their effort?
Classes are a great source of new members.
Classes can also be an income producer
if the club wants to charge for them.
Keep the money as a donation to the club
or let that money pay for a one-year club
membership for the new ham.
My services are free to the club and the students.

Please call me if....
* Your club or repeater group is
interested in sponsoring a workshop
* You or someone you know is interested
in a one-day Upgrade Workshop
* You know someone interested in a
one-day Novice Workshop

> ==============================
>
> 1990 1995
> RSGB Membership 35,000 30,000
> ARRL Membership 156,000 172,000

snip

Yup, Bert has shown us all how badly the RSGB must suck. But before we close the book on this matter, let's try just one more cut on Bert's own numbers. What is the proportion of hams in each country who chose to join their national amateur radio societies in 1995, the only year for which Bert gives us sufficient data?

UK & RSBG 50.0%
USA & ARRL 25.6%

Damn, the RSGB has TWICE the membership level as a proportion of amateurs versus the ARRL. That is inconveniently inconsistent with Bert's political message.

Hey chaps, can we all keep this under wraps, please? Now where the hell is that delete key?

BTW, I am a member of the RSGB and the ARRL and I applaud them both.

To which I would like to add that there are many of us in this newsgroup who do not live in the United States, and to whom the First Amendment is irrelevant. I am, however, aware of the significance of the First Amendment, and would like to say this: The First Amendment is a right, and one which you are justified in seeking to protect. But with rights also come responsibilities. It seems to me that too many of you demand the first without being willing to accept the second. The posting of obscenities in this newsgroup is IMHO an irresponsible act which shows the person responsible up in a very poor light indeed. It is also an insult to the vast majority of decent people who live in the US and who do *not* abuse the First Amendment. Furthermore, every time you post an obscene word, racist comment or whatever, you are handing ammunition to those who want to see the Net more tightly regulated. Ultimately, your actions could bring about curbs on the very freedom you are claiming to uphold. Think about it!

--- END OF SERMON ---

Please, no E-mail or flames on this. It is off topic, but I believe it needed saying. Now let's get back to talking about shortwave radio.

4190. Re: If you don't like it!...(Was: @!#$, my FM-25 is @#&%$! What to do?)

I clearly understand both the issue and the law, which is precisely my point, Dan. There really IS no issue and there certainly IS no law (at least, not yet). It saddens me to know that my kids can no longer read this Group without me first reviewing it. But it's MY responsibility to manage what they read, not yours, the author's, some service provider's, and certainly not society's or our government's. How about let's trying to keep it that way, Dan.

What other plans do you have that can further erode the freedoms guaranteed to us by the First Amendment of the U.S. Constitution. I'm sure we're all anxious to hear them.

I'm interested in getting a tiny, lightweight 2m or dual band HT (pref. dual band) for hiking, bicycling, etc. The Standard C508a is the lightest of the bunch, and incredibly small, like a belt pager. However, it is low powered (0.3 W) and doesn't have DTMF. Any comments on how important these issues are or anything else about this radio? Any suggestions of other models? Very compact units only, please. Thanks.

That's exactly what the First Amendment protects, Einstein. It allows us the Freedom to abuse it, respect it, think its irrelevant, hate it, love it, etc.

Obviously, your views toward the irrelevance of The First Amendment, and probably the U.S. Constitution, allow you to make such ignorant statements.

>they dont allow any vendors to sell this at a hamfest.

there are problems with coming up with rules regarding content. if the stuff isn't illegal to sell, you have a tough time telling someone that they can't try. the only way to get these things to go away is to not buy them at any price.

of course, one thing that kicked off VCR sales was the ability to watch x-rated movies in the privacy of one's home w/o the potential embarrassment of a raid (can imagine paul rubens wanting to do things a bit differently...). CD Rom sales took off around the time that it became possible to make large quantities of girlie pix on cd rom...

so it doesn't hurt to have this stuff around when you're trying to get off the ground. obviously the largest types of tapes available these days are anything but x-rated.

the same is happening to cd roms.

but if the vendor was cleaned out of "Bare Breasted Beauties - Volume 25" last year, he's been reinforced to do the same next time with gusto. Telling the vendor that you were really looking for an amateur radio disc would also help (again you tell him what you would buy, not be critical of what he brought... you want him to carry what you want - not ignore you.). however, in some respects things like the world wide web and improved internet access by members of the amateur radio community are probably cutting into some sales of CDs since you can get the same data interactively...therefore the CD vendor could have a problem getting a variety of amateur radio discs or be stuck with a stock of obsolete discs that won't ever move at any price...

Goes a bit further than that. One judges a newspaper
by what's in it. Never mind how many presses, etc.
The analogy isn't quite valid, though, for the principal
reason that there is no shortage of paper, like there is
on spectrum space. Fair to say the broadcasters have
more space than anybody else, but only because video
requires such a massive bandwidth. Nonetheless, the
public (bless them, in all their ignorance) could give
a stuff less about spectrum allocations, propagation,
etc, so long as Johnny's CB handheld doesn't cause TVI

and they get all the channels a local 'caster puts out.

Control??? Ask a broadcaster what he pays for an annual
license fee (for a SPOT freq.) Ask a R/E agent or
courier what they pay for a SPOT freq.

With the instability of a very greedy gov't over here,
and considering all the complaints of "Chooks" on 2m,
we are literally sweating our rocks off that we're going to
lose the band. The rest of Asia has already pinched
2 megs of it for taxis, etc.

>Dick MacDonald - AD0J

Don't know if this would help clarify, or confuse further:

If you have a wire carrying 1 amp current, 1 volt will be dropped
along its length for every 1 ohm of resistance. So even if you
start with 100v at one end, 1 volt will be dropped every x no. of
feet down the wire where the resistance of the wire is (feet)/x.
That's for EVERY x length. See diag:

```
100v O---------|------------|-------------|--------------|--> O 0v
1ohm 1ohm | 1ohm | 1ohm
| |
|<--1 v. --->|
```

Subject: HAM RADIO IS A CALLING

G>Many non-hams are still surprised to learn that they could get an amateur
>license without a Morse test. This is a failure of marketing. Many others,

Funny, when I entered the hobby, (I have been licensed since
1983) if you had an interest in RADIO per se, YOU found ham radio,
not the other way around. My point is that there is no need for
marketing if the interest is there. If it is not, there is no amount of
marketing you can do to win a person over. In other words, the people
will come if they want to-ham radio is not a new "flavor" of ice
cream-it's a calling.

Clint,
It is illegal, per part 97, for a dealer who directly has an
involvement in the sale or distribution of ham radio equipment to
participate in the VE system. I will double check, but I am sure this
is what it reads.

Hey Dan, or Steve, or whatever your name is,

Is this what they teach you up in the woods of Washington State, just a bit north of Prarie Ridge, a little east of Bonney Lake and Puyallup? Did you visit the Michigan Militia for your email tactical training?

Hey everybody, if you really want to hide out, away from the reality of living in the United States of America in 1996, away from drugs, crime, profane language, and newsgroup abuse, then visit Dan and his buddies out in the middle of nowhere, Washington. Just think, you guys could maybe even write your own Constitution. By the way, is Pat Buchanan a member of your little Draconian hermit club?

Don't suggest that people wage cyber war on others, Dan, unless you've got as much spare time on your hands as we do.

From: BlueSky@tiac.net
Message-ID: <31585358.1606@tiac.net>
Source record: 228886

Can someone help me by pointing me to a schematic or an article of a small VHF transmitter? It is
to be used to relay telemetry from a series of high altitude rockets. Following are the (desired)
specs:

Frequency: 2m band or nearby; XTAL controlled;
RF Power: 50-250 mW output;
Supply: 9-12 VDC (battery);
Modulation: N/A

Complexity (ie. size and weight) should be as low as possible, as should the cost - lets face it -
the typical life of these devices will be measured in minutes. I would preffer to build the xmitters myself as integral part of a telemetry package.

I have hundreds of various scanner crystals that fit in this category. They have fundamental
frequencies around 16MHz, but I don t really know if I can use them for this project.

I would very much appreciate any help in this matter. I can be also reached at

mailto:BlueSky@TIAC.net

My thanks to all those who reply!

4203. 10M equipment required - US sources

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-26 00:00:00 UTC
From: sparc@ihug.co.nz
Message-ID: <4j7bdm$jv4@newsource.ihug.co.nz>
Source record: 228887

Hi, I am trying to track down a source of equipment suitable for 10 Meter use.

Our repeater group is building a 10M repeater and because there is a lack of equipment around the 10M band, I need to know of any sources in the US that might sell equipment for our purpose.

We are looking for separate units, one for TX and one for RX. Using a split site for the repeater.

If there is anyone that can help me locate any equipment at reasonable prices I would be gretful if you could inform me.

Best Regards

Kevin

For ****'* sake, I'm the one who originally enquired about the test and if it involved any practical work.

Just for all the old farts who come on here throwing their opinions left, right and centre without any knowledge
of the sender's original abilities.

1 - I've been involved with radio myself for quite a while and know fully well the various callsigns, the 'Q' code, I've learnt morse, blah, blah, blah and BLAH!

2 - I'm heavily into computers and know my way around the various components of a circuit board.

Things that people say like:-

'Myself and many people I know spent years SWL'ing using homebrew receivers, modified ex-govt gear etc before we got round to taking the RAE. '

just cut no ice with me at all. I like radio for what it is. Non-visual communication, repeaters,
satellites, beacons and televisual transmission.

But having people come on here waffling how good it was in the good ol' days.

Well I have nodesire to become like one of the good ol' boys.

Thanks.

>Products using transistors have decreased in price significantly over
>the years. Meanwhile, the price of telephone services, taken as a
>whole, has gone up significantly.

that's because the big cost in telephones is the cable plant. getting rights of way,
pulling the miles of wire, coming up with rugged equipment, remote diagnostics
and having a trained crew ready to go out in just about every kind of weather
to keep the phones up doesn't come cheap.

just to mention it again -- everyone should go down to the library and look at what's on file about amateur radio -- in most places it's like it's still 1955... maybe handbooks from the 1960s...

and that's just a start (fixing up a reference center to be up to date is only the tip of the iceberg). radio clubs need to constantly write up and send out (mail, fax, e-mail..) announcements about their activies to newspapers, radio and television. they need to press the flesh a bit when the opportunity arises.

heck, the last few times i've been at the bowling alley practicing, i put my call sign in the automatic scorer and wait for people to ask me "What's that??". (quite impressive when you get the 3 bagger - you folks that have AS-85/AS-90 types of scorers with the flashing displays know what i mean..8)).

a lot of hams are willing to take amateur radio to the grave with them.
don't be one of them.

sorbie (an142028@anon.penet.fi) wrote:

: My question is simply, "How?" Did all the Tech+, Novice,
: General, Advanced and Extra Class members suddenly die? Or
: were they perhaps "members" who never came to meetings, never
: participated, never originated new projects, etc., etc., but sat
: around "bad-mouthing" those who, whether you agree with the
: procedures or not, simply obtained a license *IN ACCORDANCE WITH
: THE EXISTING REGULATIONS* and then *PROACTIVELY* began to pursue
: *THEIR* interests within the club because the club wasn't doing
: much else?

I can see the same thing happening at our club. We have an informal gathering at our well-appointed clubhouse every Wednesday evening, and routinely get only a handful of the OTs who show up then, or at any other event. I have never met half or more of those who hold General Class or higher licenses, and I am the treasurer!

Our club breaks down approximately 60/40 when the two classes of Technician license are combined, and when General Class and up are aggregated, respectively. We routinely get 20-30 of the same hams who show up, no matter what. The BOD tries to plan interesting presentations at our monthly meetings, with only 15-20 minutes of actual "business" meeting.

I know that there have been, and still are, personality clashes with a few of the regulars. Other than that, I am at a loss as to the reason for the lack or participation.

The Club just bought and set up an IC-706, and our small cadre of OTs hope to use that equipment to motivate more of the Techs to upgrade. We did have one 15-year-old high school student go from zero to Extra in less than a year, and we have recently had a few Techs go to Plus, as well as a handful of new hams who are in our General classes.

I would be interested to know if this pattern is typical in ham clubs.

73 de Jim - KF6CR

: Our club has a number of No-code Techs (or whatever you
: wish to call them), many of whom are active in club projects and
: even hold club offices. We also have a number of Tech+,
: General, Advanced, and Extra Class ticket-holders who are
: likewise actively involved in club projects *AND* hold office.
: It isn't easy holding a club office and worrying about things
: like keeping long-term projects rolling (we're doing a balloon
: project), getting ready for Field Day, lining up interesting
: presentations for the next meeting, etc. I salute those who are

: willing to get in and do it, regardless of their license class.
: They are "real hams," every one of them.

: So, I would simply say this: If you want the new hams to
: upgrade, then you have to *SHOW* them what's out there. We've
: run videos on DXing by the So. Cal. DX Assoc.; I've given a
: presentation on the history of the Vibroplex bug including
: a hands-on demo with an oscillator; other members have done
: presentations on antenna design, VHF propagation, HF DXing,
: packet station setup and operation, demos of old "BA" gear, etc.
: We've had a "HT clinic" with test equipment to "evaluate" (and
: even adjust) everyone's HT, and so on. All of these things help
: build interest in the various facets of Amateur Radio, and serve
: as "motivational" tools to encourage members to try new things
: (or even "old" things, like operating CW or using tube gear)
: and/or to upgrade (if necessary) so they *CAN* try them.

: And, I submit that the local club is the best way to make
: that happen. If your local club isn't doing those things, if
: it's become nothing more than a coffee-and-doughnuts "Good Ol'
: Boys" bull session, then sooner or later the younger members may,
: in fact, "take it over" and make something happen that *THEY'RE*
: interested in. And the older members have no one to blame but
: themselves for letting it occur.....

: And, BTW, I was "bad-mouthed" in the '50s when I had a
: Conditional license, so I know what it feels like - and it is
: *NOT* in the spirit of Amateur Radio.

: End of editorial.

gary@ke4zv.atl.ga.us (Gary Coffman) wrote:

>In article <4imgge$elg@dns.humberc.on.ca> gray@news.humberc.on.ca (Kelly Gray) writes:
>>Keep in mind that the Internet is no longer a USA only network, it has many
>>nodes in other contries. Regardless of what laws the US Congress may pass,
>>those of us outside the United States are free to ignore them if we choose
>>to do so.

>That's true. The FCC's jurisdiction stops at the border. But the FCC
>can cut off the internet at the border if they choose.

But the practicality of that is so extreme, the courts wouldn't
let it happen.

>We've already seen the
>German government insist that content be filtered at their border,

The German courts only demanded certain newsgroups be dropped
by one ISP. They did nothing to address German citizens accessing
XXX rated web sites, or the banned newsgroups via alternative
methods (i.e. having a friend outside Germany forward every
post from one or more of the banned newsgroups). In the end,
didn't the one ISP impacted make the specified newsgroups
unavailable to only their German customers by some ISP
specific filter?

>and the FCC could do the same for the US border.

Not without a major public battle first and the followed
with court battle. Just look at the CDA
court case already working its way in the judicial process.

>That would
>have an enormous impact on the internet. Every posting and every piece
>of Email and every file and every data stream would have to be vetted
>by a gateway at the border before being allowed to cross.

Which raises major issues of privacy alone.

>That would pose an enormous logistical problem to the net, one large
>enough that it could effectively kill the net as a worldwide entity for
>practical purposes.

Which, again, is exactly why it will never happen. Add to that the
ability to encrypt and the logistics gets even more far fetched.
The FCC does not simply rule for or against things without significant
input from both sides of any pending rulemaking (and, it would
take a formal rulemaking for the FCC to demand full monitoring of

all internet US boundaries).

This entire issue becomes one of practicality versus any real
effort to thwart the internet's growth or international connectivity.
So...while it is true that the FCC may have the power to invoke such
draconian measures, the practical aspects of doing it coupled
with the public input (rulemaking) process will not see it ever
happen. And...even if it did, the court process would immediately
be instituted by many organizations as is the current case with
the anti-CDA supporters (ACLU, EFF, et al).

Has anyone ever seen a small mixer to send the audio signals from several different radios to one speaker. I have a 2 meter, a CB, a scanner, and a hands free cell phone in my vehicle, and I only want one external speaker.

Thank you in advance.

Dan

Marc-

I'm holding in my hand a copy of REFERENCE DATA FOR RADIO ENGINEERS, Fifth Edition. It was Copyright in 1968 by Howard W. Sams & Co., Inc., a subsidiary of International Telephone and Telegraph Corporation.

I don't know if a newer edition gets a newer number or not. This one has Library of Congress Catalog Number: 43-14665. It was checked out from the Kennedy Space Center Library, which assigned it numbers TK6552, R332, 1968. Perhaps these numbers mean something to a Librarian.

I can't find an ISBN number. Maybe the ISBN system hadn't been implemented in 1968.

I received an advertisement for a new edition recently, but didn't keep it.

Jim,

You bring up a good point. I think that going digital using QRP is a good idea. However, the majority of QRPers use CW for the communication medium. Why? Because construction is easier to implement, although I admit I am much more adversed in digital communications than analog RF.

Using a simple microcontroller, such as the PIC series, could be used to control a digital CW QRP radio. Canned CW messages could be sent or the CW message (from a person controlling a key of course!) could be converted (using a DAC) and be transmitted digitally. But this method is more complicated than just straight-ahead CW. And for backpacking, its too much.

Source record: 228705

I have an FT-530. A year or so ago I did the extended coverage mod. Recently, the mod stopped working. I now have normal coverage only. I would like two things. First of all, if anyone has the jumper configuration from the factory (I think that I may have touched one together by accident and can't remember what the settings were to check them) and if possible, a solution to the problem.

I'd appreciate any help I could get.

Tnx

Jim, I think that you hit that one right on the head! It all boils down to change, humans more than any other mammal hate change, but we adapt to it better than any other mammal... Times are changing, if we always resisted change, then we'd still be living in caves.

As far as letting in the computer types for experimentation, I agree being a no-coder myself I tried packet and have realized that 1200 baud packet is basically useless without any kind of organized network which we lack in my part of the country. Plus it's WAY too slow!

Why is it that a 9600 baud packet modem costs more than a good external 28.8k modem? It it because it costs more to make? Gosh I hope not, they certainly aren't really any more complicated... I like companies like Ramsey, I have always looked at building my own 220 rig as a challenge, now I'm preparing to do it!

I'm a computer type by nature, I've spent the past 2 years working on a software package for ham radio, something that everybody might want, a database of ham radio and scanner modifications. It'll be on it's 5th release soon and sports more than 800 modifications...

As far as the code argument goes I have noticed some Extra's and Advanced license holders who look down towards no-code ticket holders as lower class operators who are too lazy or not smart enough to learn code... Not smart enough? Hmmm... When was the last time I heard someone ask what the morse equivilent was for a particular letter? Then again, I cannot even begin to tell the number of times these same few people have asked me how to configure their computer to do this, or for me to write a program to do that, all related to ham radio of course...

Testing:
I disaree, I do think some degree of testing is required, at least for a little while longer, although I'd like to see the morse requirement dropped. I for one have

no plans to EVER learn code, even if it means I have to wait another 20 years before I can do HF... I have more constructive things to do with my time, like run my business, or worry if the sync pulse on my ATV unit is too high...

This is an issue that will never go away until code is abolished... If the 'old-timers' are worried about the integrity and intelligence of the operators allowed to run HF, then how about replacing the HF requirement with a P.C. proficiency requirement... Packet connections, RTTY, etc. A PC test could include sitting down at a computer and hooking a TNC up to a computer and radio, configuring the software and connecting to a node. Or, how about a requirement for Radio Programming proficiency?? It seems that many hams, both new-comers and old-timers have trouble setting up these new hi-tech rigs...

My point here is "practical knowledge"... It'll help the hobby more than any license class or any CW requirement, and remember, it started out as a hobby, still is, and will always be!

73,
Steve

: satellites, beacons and televisual transmission.

: But having people come on here waffling how good it was in the good ol' days.

: Well I have nodesire to become like one of the good ol' boys.

: Thanks.

--With your "attitude" problem, you have no fear of becoming one of the
"good ol' boys". You will very likely remain a bitter, antisocial,
bigoted group of one.

It's funny really. You accuse others of intolerance for points of view
that do not coincide with your own, then attack these others with your
own intolerance. Hypocritical?

The "old farts" cheap shot I see over and over in postings by what I
presume are those under-25ish. It seems to speak of a hatred and an
implied violence for those who, by an accident of birth, enjoyed a
better time to live. Yes, the '90s are brutal and hard, but why bash
the last generation or two for it?

Amateur Radio is for everyone; young and old, technical and not-so-
technical, morse and phone and packet, experimenter and rag-chewer.

Abusive arrogance it does *not* need.

>marketing you can do to win a person over.

well...there's never been more choices for what to do with leisure time than ever before. marketing makes sure that the potential amateur at least is aware of amateur radio. i'd never heard of it before i'd read a friend's old electronics illustrated (think that was the mag) that has a column in it by w2nsd...in the late 60s'/early 70's that was about all the "marketing" that was done for amateur radio...

everyone else is out trying to call attention to themselves so to get more business or more activities up and running. amateur radio should not stand idly by.

ANARTS News Bulletin 901 24TH MARCH 1996

AMSAT NEWS SERVICE BULLETIN 077.01 FROM AMSAT HQ

William A. (Bill) Tynan, W3XO, has been named HamVention 1996 Amateur of the Year by the Dayton Amateur Radio Association. Bill has championed the cause of VHF/UHF enthusiasts, worldwide. He had been contributing editor for QST Magazine's "World above 50 MHz" column for eighteen years, providing a medium to nurture new communication techniques, encourage DX performance and improve contesting rules on the VHF/UHF bands.

He pioneered the establishment of the Radio Amateur Satellite Corporation (AMSAT). From the founding days of the first OSCAR-6 launch to his present post as President of AMSAT-NA, Bill has sacrificed much of his personal time, talent and resources to the promotion and development of the amateur satellite program. His vision continues with the advent of the Phase 3-D project, scheduled for launch in December, ushering in an entirely new dimension of amateur radio operation.

EA WW RTTY CONTEST PART 1

6-7 APRIL 1996

SPONSORED BY SECCION TERRITORIAL COMARCAL DE ARANDS DE DUERO. THE FIRST FULL WEEKEND IN APRIL.

CONTEST PERIOD: FROM 1600Z SATURDAY TO 1600Z SUNDAY (24 HOURS).

BANDS: 80, 40, 20, 15 AND 10M (FIVE BANDS).

CLASSES: A) SINGLE OP, ALLBAND C) MULTI-OP, ALL BAND
B) SINGLE OP, SINGLE BAND D) SWL

EXCHANGE: EA STATIONS SEND RST PLUS CQ ZONE PLUS PREFIX OF PROVINCE.
ALL OTHERS: SENT RST PLUS CQ ZONE

MULTIPLIERS: EACH DXCC COUNTRY, CQ ZONE, AND SPANISH PROVINCE ON EACH BAND. SPANISH PROVINCES ARE: A, AB, AL, AV, B, BA, BI,

BU, C, CA, CC, CE, CO, CR, CS, CU, GC, GE, GR, GU, H, HU, J,
L, LE, LO, LU, M, MA, ML, MU, NA, O, OR, P, PM, PO, S, SA, SE,
SG, SO, SS, T, TE, TF, TO, V, VA, VI, Z, ZA. (52 EA
PROVINCES).
NOTES.
1) ALL MULTIPLIERS COUNT ONCE PER BAND (BAND
MULTIPLIERS).

2) FIRST QSO WITH EA STATION ON EACH BAND COUNTS AS
AN ADDITIONAL MULTIPLIER, ALONG WITH PROVINCE
3) CQ ZONES NOW COUNT AS MULTIPLIERS.
4) QSOS WITH STATIONS IN YOUR OWN COUNTRY ARE VALID
FOR MULTIPLIER CREDIT BUT HAVE ZERO QSO POINT VALUE.

HA! Good (and typical) stories.

My favorite experience was the time I was checking out a shortwave reveiver (new model) and happened on a radio Netherlands program on how to buy a shortwave radio. The announcer said, "here are three questions that your salesperson should be able to answer. If they don't know the answers, take your business elsewhere." At that point, the RS salescreature said, "Turn it off." (*snicker*)

BTW - No, I don't remember what the three questions were...

Bill,

I think this has changed because of theTelecommunications Act of 1996.
I saw something posted to this effect on CompuServe's HamNet forum
lately. Now those n the industry can also be a VE if they want.
Possiably the www.fcc.gov site might have something on just how this
affects amateur radio.

Also another topic the FCC site also has a 50 page report on the
effects of electromatic radiation and the amateur station, it is
pretty interesting ad\s the FCC tested about every antenna.

Response to #36842

Jim, KH2D, you have stumbled in a little bit too low in the "food chain". There are some other SIGs with intellect.

You will, however, need to improve yourself first. For instance, you used the word senario a couple of times. The word is s-c-e-n-a-r-i-o. It is a derivitive of the word "scene" -- as in scene of the crime.

Best of luck,

Jack VE3EED/W7
:-)

From: BlueSky@tiac.net
Subject: >>>>HELP - Small VHF Xmitter for Airborne Telemetry<<<

Can someone help me by pointing me to a schematic or an article of a small
VHF transmitter? It is
to be used to relay telemetry from a series of high altitude rockets.
Following are the (desired)
specs:

Frequency: 2m band or nearby; XTAL controlled;
RF Power: 50-250 mW output;
Supply: 9-12 VDC (battery);

Modulation: N/A

Complexity (ie. size and weight) should be as low as possible, as should the cost - lets face it -
the typical life of these devices will be measured in minutes. I would preffer to build the
xmitters myself as integral part of a telemetry package.

I have hundreds of various scanner crystals that fit in this category. They have fundamental
frequencies around 16MHz, but I don t really know if I can use them for this project.

I would very much appreciate any help in this matter. I can be also reached at

mailto:BlueSky@TIAC.net

My thanks to all those who reply!

>verbatim as a rule making.

Wrong, entirely. It is not even correct to say the no-code
movement was initiated and had support by a strong grass-roots
contingent. Certainly, some amateurs supported such a change.
However, the reason for FCC's statement in the late 80s that
there was "a change in amateur sentiment" to bring on a no-code
license (after amateurs had turned down no-code by a 25:1 margin
in 1982), had to do with its 1982 defeat, and the following
statement from an FCC official:

"Because amateurs have opposed the no-code license, the
Commission can no longer guarantee that frequencies in the
VHF/UHF spectrum will not be in jeopardy of being lost."
--Former PRB Chief Robert Foosaner, ARRL National Convention, New
York City, 1984.

Thus, if you wish to state that the Commission applied an undue
degree of pressure on amateurs and the ARRL for a no-code
license, one would tend to agree. But "the change in sentiment"
did not come from the heart and soul of those in the Amateur
Radio Service clamoring for a no-code license. On the contrary,
the evidence indicates the FCC led the move towards a no-code
license, going all the way back to Ray Kowalski's efforts in the
early 1980s.

>>Ultimately, FCC overturned a part of that decision, which was

>vince, you _do_ understand that the FCC runs the amateur radio
>rulemaking process...that the League is only a contributor to
>it?

In the case of bringing on a no-code license, definitely. Otherwise, generally NO. That's because the stock-in-trade, bread-and-butter statement found in a multitude of FCC Report and Orders is as follows:

"By and large, the Commission's conclusion (to grant or deny said petition) is based on the views that the Amateur community has shared with us over the years, generally in a rule-making context."

The above statement essentially says that the Commission will go along with the wishes of the Amateur Radio Service, i.e., in particular, the representative body of the Amateur Radio Service, the ARRL, whenever possible. It was indeed rare for the Commission to part hairs on an ARRL petition concerning the frequencies under which said petition would take effect. But this is one proposal the _FCC_ wanted, not necessarily amateurs nor even the ARRL. Nevertheless, the ARRL surrendered. I believe a major reason for that goes back to a 10-to-15 man NARA group, and their influence with Ray Kowalski. ARRL could not afford to have a small contingent prevail over the 135,000 member League. As for choosing 144 MHz, we now know that the FCC had plans for the 220 MHz band.

>>initially intended for amateurs operating ABOVE 144 MHz. The

>lemme check here again, they have something like 175,000 members
>and there's 750,000 plus hams? the league needs to get serious
>about recruiting...

Actually, the decision WAS made by the League. If you attended the Dayton Hamvention in 1989 and kept close to members of the BoD, you know that the decision had already been made. But even if you did not attend Dayton, simply read the aforementioned minutes of the meeting, where the BoD took several hacks at the proposal to arrive at one that would be acceptable to all. That again clearly indicates that going in, the decision had already been made to get the proposal through. Essentially, membership was saying: 'no, we do NOT agree with the ARRL proposal for no-code. Formulate another proposal and we will consider it.' Instead, the BoD decided they weren't going to do that. There was no reason to rush to judgment.

>>that." The story has changed now, hasn't it?

>well, if the international rules change, then yes, our domestic
rules should change.

I believe you've got the tail before the horse. The ARRL often assumes a leadership position in issues such as these. It would not be unusual for a change in treaty to be spearheaded by ARRL. Under those circumstances, it would be fair to conclude that Amateurs were led down the garden path in accepting the no-code VHF license to begin with.

>>"The Morse Code issue has little to do with whether it gets
>>through when other modes do not, whether it is a useful mode or
>>not, or whether hams should 'pay their dues' as their
>>predecessors. The issue involves whether this Service should
>>tolerate an easing of requirments, both code AND theory, to save
>>a hobby that, under the circumstances, might not be worth
>>saving. The issue is deregulation, pure and simple, and it will
>>be a durable beast."
>> --Former ARRL President Vic Clark, 1982

>so Vic Clark was taking a defeatist stand here - effectively
calling for a mercy killing.

Far from it. Vic Clark, an electrical engineer by trade, knew EXACTLY what was going on at FCC back in the early 80s. And that's what prompted his statement in 1982. Unfortunately, the good Lord did not give him enough time to do anything about it.

>>Without meaning to take an adversarial position, theory exams
>>were long ago eased, starting with the publishing of the EXACT

>be public, they're public. and we had 50% fail rates at the last
>test session...explain to me about how publishing all the
>questions and answers makes for a no-fail scenario at the
>exams...

The ARRL HAS options. Constitutional law states that one cannot stop the publishing of exact Q&A. But there is no law that prohibits VE's from securing the right to modify questions, or VEC's from generating question pools faster than they can be published. As for the 50 percent fail rate, it simply shows that our educational system may be in much worse shape than is generally recognized. It appears to me you are saying, 'well, things are pretty bad....let's not fight it.'

>>What are we experiencing instead? Extra Class Amateurs who

>hydro classes.) and it's called Electromotive Force and it's
>measured in Volts...no voltage differential, no current
>flow...humm..sure seems to be a lot of "water" based
>terms in use here...)

Actually, freshman physics courses teach what is even in the
ARRL handbook, and in the simplest terms: voltage is the WORK
per unit charge, needed to move electrons from place to place.
But the fact that it's in the Handbook, and the fact that ARRL
does produce some excellent texts, doesn't get it done because
the exam structure doesn't really demand that the applicant
understand even the BASICS of electrical law.

if you did not attend Dayton, simply read the aforementioned
minutes of the meeting, where the BoD took several hacks at the
proposal to arrive at one that would be acceptable to all. That
again clearly indicates that going in, the decision had already
been made to get the proposal through. Essentially, membership was
saying: 'no, we do NOT agree with the ARRL proposal for no-code.
Formulate another proposal and we will consider it.' Instead, the
BoD decided they weren't going to do that. There was no reason
to rush to judgment.

>>that." The story has changed now, hasn't it?

>well, if the international rules change, then yes, our domestic
rules should change.

I believe you've got the tail before the horse. The ARRL often
assumes a leadership position in issues such as these. It would not
be unusual for a change in treaty to be spearheaded by ARRL. Under
those circumstances, it would be fair to conclude that Amateurs
were led down the garden path in accepting the no-code VHF
license to begin with.

>>"The Morse Code issue has little to do with whether it gets
>>through when other modes do not, whether it is a useful mode or
>>not, or whether hams should 'pay their dues' as their
>>predecessors. The issue involves whether this Service should
>>tolerate an easing of requirments, both code AND theory, to save
>>a hobby that, under the circumstances, might not be worth
>>saving. The issue is deregulation, pure and simple, and it will
>>be a durable beast."
>> --Former ARRL President Vic Clark, 1982

>so Vic Clark was taking a defeatist stand here - effectively
calling for a mercy killing.

Far from it. Vic Clark, an electrical engineer by trade, knew
EXACTLY what was going on at FCC back in the early 80s. And
that's what prompted his statement in 1982. Unfortunately,
the good Lord did not give him enough time to do anything
about it.

>>Without meaning to take an adversarial position, theory exams
>>were long ago eased, starting with the publishing of the EXACT
>>questions and answers for all ham exams. It wasn't always that
>>way, and is the prime reason ARRL threatened court action
>>against Dick Bash back about 1980. The fact that theory exams
>>aren't being restored now to their former status indicates that
>>the ARRL supports this deregulated format, i.e., it supports
>>continuing the eased requirement format.

>the ARRL doesn't get to vote on this one. rules say they have to
>be public, they're public. and we had 50% fail rates at the last
>test session...explain to me about how publishing all the
>questions and answers makes for a no-fail scenario at the
>exams...

The ARRL HAS options. Constitutional law states that one cannot
stop the publishing of exact Q&A. But there is no law that
prohibits VE's from securing the right to modify questions, or
VEC's from generating question pools faster than they can be
published. As for the 50 percent fail rate, it simply shows
that our educational system may be in much worse shape than
is generally recognized. It appears to me you are saying,
'well, things are pretty bad....let's not fight it.'

>>What are we experiencing instead? Extra Class Amateurs who
>>never learned Ohm's Law, for one. Hams that still believe that
>>voltage, a fundamental unit of electricity, is a unit of force
>>or pressure.

>even in college, they use the hydraulic analogy for freshmen EEs
>(what's funny is that the MEs get an electrical analogy in their
>hydro classes.) and it's called Electromotive Force and it's
>measured in Volts...no voltage differential, no current
>flow...humm..sure seems to be a lot of "water" based
>terms in use here...)

Actually, freshman physics courses teach what is even in the
ARRL handbook, and in the simplest terms: voltage is the WORK
per unit charge, needed to move electrons from place to place.
But the fact that it's in the Handbook, and the fact that ARRL
does produce some excellent texts, doesn't get it done because
the exam structure doesn't really demand that the applicant
understand even the BASICS of electrical law.

Regards,
Vince, WB2EZG

Clint,
It is illegal, per part 97, for a dealer who directly has an
involvement in the sale or distribution of ham radio equipment to
participate in the VE system. I will double check, but I am sure this
is what it reads.

G>Many non-hams are still surprised to learn that they could get an amateur
>license without a Morse test. This is a failure of marketing. Many others,

Funny, when I entered the hobby, (I have been licensed since
1983) if you had an interest in RADIO per se, YOU found ham radio,
not the other way around. My point is that there is no need for
marketing if the interest is there. If it is not, there is no amount of
marketing you can do to win a person over. In other words, the people
will come if they want to-ham radio is not a new "flavor" of ice
cream-it's a calling.

Subject: Low output with PK-232 and TS-440

Greetings!

Thanks for all the feedback on using HamSticks in a dipole configuration.
For
better or worse, I'm up on 40M at <1.3:1 SWR!.

But now, a new problem: I've got a "late-model" PK-232MBX connected from
Radio 1 to ACC 2 on a TS-440/AT with an AEA cable. I'm currently
experiencing
two... phenomena:

1. With R151 (resistor associated with the Radio 1 Jack on the '232) clipped,
the best I can do is 25-30 W. Clipping the resistor is recommended by AEA
specifically for '440 radios connected in the above fashion.

2. Apparently, when the '232 keys the '440 through the ACC 2 jack, if a PTT
mic is connected, it's keyed, too.

Can/Will anyone help diagnose/explain what's going on? I can key up with
the PPT mic and fully drive the transmitter at/near 100W, so I don't believe
it's an overall output problem.

Thanks and 73 de KC4WEJ,
Derrick

Yes, as Gary says there is such a beast. They are large (3' x 4') and
can be had for $3.50 apiece from the US Govt. Printing office. You
might check locally. I am in Cleveland and the USGPO has a bookstore
right here that usually stocks the posters (although they have some on
order right now).

I might also mention that Motorola has a similar poster, it's about 4'
by 2', also quite detailed. I have one, but not near me right now or
I'd pull the 1-800 number from it. They sent it to me free. You might
have to do some legwork to find the number, but you might start with
Motorola in Schaumberg, IL, just outside of Chicago. I'm sure directory
assistance (708-555-1212) can give you a main number for the company,
which in turn should be able to help you find the actual department (you
might try asking for customer relations, or their PR/Marketing
department).

John sums up my feelings toward my C508A pretty well, except for one point. I think it is fine as your primary HT, since it does all the things you can expect a HT to do. For your primary *radio*, however, I'd recomend not another HT, but something other than a HT, like a nice 50 watt mobile rig.

I find that the C508A would work anywhere my FT-470 would work, and places where the C508A fails, so did the FT-470. So I sold my FT-470 and kept the C508A. The difference in power just isn't significant, but a better antenna can be, and Comet makes a nice one for the C508A. As far as I'm concerned, the only failing of this radio is the lack of a TT pad. Considering its size, however, that lack is understandable.

>to business interests.

I don't think your last sentence is true. If it were, then 11m would
be in imminent danger of being lost to business interests. But of course
it is not (it's probably the most secure radio allocation of all due to
the sheer numbers populating it). The real danger is that letting poor
behavior proliferate could lead to other amateur bands becoming a copy
of 11m.

As evidenced by the current problems on HF, neither Morse tests nor
technical tests are a cure for these problems. What is required is
approbation by the rest of the amateur community, IE peer pressure.
Amateurs should shun these miscreants, and if they feel sufficiently
outraged, should protest these behaviors to these miscreants by sitting
down and writing them a letter to let them know how disappointed they
are in them. A cc to QST and the FCC should be included. Perhaps QST
can be induced to publish a lid list, and perhaps the FCC can be
prodded into activity. But whether these two behemoths rumble into
action or not, a torrent of private protest can still have a salutory
effect. (For even better effect, cc a radio club local to the miscreant
requesting they forward comments to the miscreant's wife and pastor
as well.)

Cleaning up my hard drive, I came across this old gem.
Enjoy, de Hans, K0HB
- - - - - - - - - - - - - - - - - - -
The Quarter Century Appliance Operators was founded in the early 1950's
by a small group of Amateur Radio operators from the Pacific Northwest.
They had been active in their hobby for over
25 years, yet still lacked the basic knowledge of radio
electronics and had no idea of how their equipment worked.
They banded together to try and protect each others honor and
pride. At radio gatherings and club meetings in the 1950s one
was considered unworthy of the name Ham Radio Operator if he
or she couldn't not only name components, but know how to solder
them together and make a radio work!
When faced with insults and dreision, those few hardy
pioneers banded together and formed the First Chapter and
National Organization of the QCAO. This was known as the "Cold
Solder" Chapter. They even coined the now-famous club byword
"e pluribus ignoramae" which is Latin for "We don't have to know
how to solder, we just wanna talk on our radios."
No veterans of that first chapter are known to be active on
the air today. In the late 1950s and early '60s, with the
worldwide interest in science and space and technology, the QCAO
membership went underground.
It is with great pride and dignity that today in the 1990s
the revived QCAO stands ready to rise from the ashes, and become
the standard of mediocrity it once proudly was. In honor of
those first pioneering members, QCAO hereby invites all eligible
applicants to step forward and join!
The benefits of QCAO include not only the pride of
membership. Think of the warm glow you will feel at club
meetings and gatherings showing off your new all-plastic
imprinted QCAO pocket protector! And that's not all! For your
minimal membership fee, you will also receive a handsome,
suitable-for-framing, certificate of honor, with hand-lettered
name and Charter Membership Number. Other QCAO memorabilia
will soon be available for members, including T-shirts, caps,
pins, etc. At this date charter membership numbers are still
available. Membership requires a 25 years (more or less)
interest in Amateur Radio, coupled with a basic ignorance of how
radios work and how to repair them.
Think of meeting other QCAO members on the air! No more
embarrassing pauses when someone in the QSO mentions an RF choke
or a parasitic bleeder...Be able to exchange meaningful sharing,
talk about real things, yes, even swap QCAO numbers with each

other! And soon perhaps . . . a worldwide QCAO contest!
You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!
"e pluribus ignoramae"

Original author unknown, so flame her.

4241. Ham Radio Classes in the South Bay

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-27 00:00:00 UTC
From: ikluft@thunder.sbay.org
Message-ID: <DoxnEt.I57@thunder.sbay.org>
Source record: 228767
Cross-posted to: rec.radio.amateur.misc,sbay.hams,sbay.general,ba.general

PLEASE FORWARD THIS TO ANYONE INTERESTED IN GETTING A HAM RADIO LICENSE.

The West Valley Amateur Radio Association (WVARA) is presenting a FREE Amateur Radio class in Cupertino. Anyone in the South Bay Area interested in getting a Ham Radio license is welcome to attend the class.

The class will be held on Mondays and Wednesdays starting April 29th. It will end on June 5th. The times of the class are
6:30-7:00PM Morse Code (optional)
7:00-9:00PM Theory
It will be held at Monta Vista High School in Cupertino.

About the Class

The objective of the class will be to earn your Technician license (Morse Code not required) or your Technician Plus license (with Morse Code.) The Technician license has VHF/UHF privileges including repeaters and digital packet radio. In addition to those, the Technician Plus license also has HF privileges, allowing you to talk to Hams around the world.

Classes will be held in the computer lab at Monta Vista High School in Cupertino. The quizzes on portions of the Ham Radio exams at each session will be taken and graded via the Internet.

The last session of the class (June 5) will be an open-to-the-public Ham Radio exam session. Our appreciation goes to the Sunnyvale VEC for accepting our request to hold exams at that class session.

The class is free except that we do ask that you purchase a copy of "Now You're Talking" which will be the class text. It's available at any local Radio Shack store, Ham Radio Outlet in Sunnyvale or Halted Specialties (HSC) in Santa Clara.

Students will be responsible for their own exam fees whether they take their exams at the last class session or at another VEC test session. Exam fees in 1996 have been set by the FCC at $6.07 per test session.

By finishing the class on June 5, the students will probably all have their licenses in time for Amateur Radio Field Day 1996 (June 22-23) even if anyone needs to re-take an exam at a regularly-scheduled VEC session. Field Day is a great chance to learn more about the hobby and an opportunity to operate radios on HF and VHF. Students will be invited to participate at the WVARA's Field Day site in the Santa Cruz Mountains.

For More Information

If you'd like to request more information or sign up for the class you can

Wow, R.G., you are really amazing. I'm sure that all of the members of the alt.radio.pirate newsgroup are really impressed by your investigative skills. For your next trick, maybe you could show us all how to jackoff and type at the same time.

Maybe you could hook up with our buddy Dan Morisseau in Washington. His number is (206) 752-1847. I bet you two would hit it off instantly.

>The only way to get anything back to life is to cycle the power on the
>power supply...

The power has indeed been shut off. Most power supplies contain a "crowbar" circuit that fires a SCR to shunt out the output should the voltage rise much above the rated value. This protects your radio from receiving 20-30 V should the regulator in the power supply fail. Most likely, RF is being rectified in the power supply and causing it to regulate improperly, though it is possible that only the crowbar circuit is being fooled. (it would be unwise to simply disconnect the SCR, of course).

So the solution is to keep RF away from the power supply. This could be hard to do with an indoor antenna. Obviously, the first measure is to move the antenna as far as possible from the equipment. The cord between the power supply and the radio can act as an antenna. So ideally shorten it (you may not be ready to do that since those cords are expensive) or coil it up to the minimum length possible with setting the power supply right next to or under the radio. Placing ferrite cores on the power lead and the antenna coax may help too. Now that the supply and the radio are right next to each other, bond them together with a grounding strap. Try putting a capacitor (0.01 - 0.1 uF disc) across the output terminals of the supply, or even better a group of 3 capacitors in a triangle from the two ouput terminals and the supply case.

If none of this helps, try operating from a 12V lead-acid battery instead of the power supply. This may uncover other problems, such as RF getting into the microphone cord or on the radio case (the knobs feel "hot"). If that is the case, better grounding or otherwise trapping RF from getting back onto the outside of the coax is in order. It is tough to get a good ground in an apartment situation which I assume you have.

This is a very handy "LITTLE" radio.

I use it at hamfests and such were low power is not a problem.

I have also used it a public service events to cross band off my mobile radio. a feature I could also use on my regular sized HT (a Standard C528).

I keep it in my backpack, and when the trains are running late, I listen to the RR freq to see what the problem is. easy to do, the radio has 60 memories, no sweat to have some wierd stuff programmed in.

I also keep the NOAA programmed in to check the weather.

I can also hit a couple of close repeaters in the area, But I live near Chicago, there are repeaters all over the place.

But like you said, not DTMF, so I dont plan on doing autopatch with it, but as I said, I do have a mobile, and a regular HT.

Just so you know, it will also receive 350, 800 (cell blocked) and 120 am.

Hope that helps.

Frank "there i've said it, I feel better." Giampa

I have a 508 and like it quite a bit. It is very small and light, will work for a long time on a set of batteries, and covers both 2m and 440 MHz (though it really isn't what's usually called "dual band" since it only receives one channel at a time, though the channel can be in either band.)

Your situation will decide whether the 300mW power is adequate. If you are going to be near good repeaters, or working simplex among a travelling group, it will be fine. Further out in the "sticks", no HT is really going to cut it, although a traditional 3-5 W "full power" unit would be noticeably (10dB) better. If you haven't yet, borrow someone's HT and take it on a trip or two to get an idea of what you will and won't be able to do. The antenna on the 508 is OK considering it's size, but it works well in the ham bands only; it is very poor for receiving out of band signals, which is good for keeping "intermod" out, but bad for weather radio channels, etc. The 508 has a standard SMA connector which allows external antennas to be connected. As with any HT, connecting *any* antenna other than the rubber stick yields a substantial increase in range.

Similarly the lack of DTMF is something that depends on your situation. If you need to be able to send DTMF once in a while, you could carry one of those pocket dialers that used to be popular before all telephones were equipped with DTMF. The lack of a full keyboard also means that frequencies can't be punched in directly, you have to VFO to them, so most operation is done from memory channels. Having only a few important buttons and a "menu" of sorts for most settings, the radio is simple to operate.

The other major limitation of the 508 that is probalby shared with any "tiny" radio is that the speaker is not very loud. The noise of a moderatley crowded room or urban street is enough to drown it out even with the volume all the way up. A conventional speaker/mic interface is provided however, so you can easily plug in an earphone, headphone, etc.

>don't like ?

After reading and participating in the Usenet for the better
part of a decade, I've noticed a few trends.

#1. Reasonable amateur radio discussion does take place. On
groups with a more specific focus, like r.r.a.digital.misc,
r.r.a.homebrew and r.r.a.antenna, you tend to see a much better
signal to noise ratio than on r.r.a.misc. On r.r.a.policy,
you get some of the most inflammatory discussion, but sometimes
the signal to noise ratio is better than r.r.a.misc.

#2. There seems to be a trend over the last few years for
people to treat the Usenet as a place to come and vent their
anger, frustration and dislikes. At the risk of generalizing,
it seems like most of this is being done by some of the newer
Usenet participants. Maybe after they're around for awhile they'll
settle down...

[...]

>Is there anywhere I can go to read things about Ham Radio that
>other people DO like, maybe I'm in the wrong newsgroup ?

As I mention above, any rec.radio.amateur.* newsgroup that isn't
rec.radio.amateur.misc or rec.radio.amateur.policy is going to be
much better. There are also mailing lists, like the QRP-L, which
are pretty good. Have a look at the "Guide to the Personal Radio
Newsgroups", which should be available in rec.radio.info on your
server.

That's true only if the restrictions weren't spelled out as a
condition of granting booth space. There are clauses like this in the
contractual agreements for commercial trade shows - exhibitors who
don't abide by the rules are expelled without refund.

Actually, you leave the audio wire connected to the same spot. What you want to move is the PTT wire. When it's connected directly to the 'mute' pin on ACC2, then the mute pin is connected to the PTT pin via a diode, normal operation of the PTT (via the microphone) does not mute the microphone, but PTT asserted by the PK-232 does mute the microphone. If my thinking is right (at 6:30 AM) you want the cathode going to the mute pin and the anode going to the PTT pin.

Hi, Paul!

I just bought a C508 yesterday (after long consideration) and
it's just great. I have had the C408 (the 70cm version) for
about a year now and the C508 definitely _is_ an improvement.

60 memory channels + 2 calling channels are more than enough
for my needs. Frequency range (RX) is 100-200, 300-500, 700-1000
MHz with AM capability, so it also works as a scanner. The
receiver is very sensitive and the transmitter will (here in DL)
always reach at least one repeater. CTCSS encoder and tone
squelch are built in right out of the box, but aren't of much
use for me yet. The C508 will fit even in the smallest shirt-
pocket and is light enough. Runs well on 2 AA cells, which will
last rather long.

To sum it all up: the C508 is the mature duoband version of the
C108/C408. The package also includes a belt-clip and a carry-strap
and (in DL) an SMA/BNC adapter.

Hope that helps,
Jens, DB9LL

You want to put an '830S on CB channels? You may have picked a difficult rig for that. First of all, you have a tube driver and finals, so you'll have to convert your 12m tank circuits, or one set of your 10m tank circuits, to 11m. Now although you may want to operate mostly SSB, you still want to be able to get on AM sometimes, right? Well your '830S doesn't do AM without some serious modifications. If you're fortunate enough to get an "export" model TS-830M, then you have AM so that's not a problem.

Starting with a Yaesu FT-747 is much easier. Channels already in place, all-mode operation, no tuned tank circuits, and a simple mod for general coverage transmit. Of course here in the US you can only listen, which requires no mods.

>My point here is "practical knowledge"...

CW *is* practical knowledge. I can't count the number of times I've attempted to migrate a technical discussion from CW to the phone bands, only to discover that the Q5 CW QSO couldn't be continued on phone. The opposite is also true - when band conditions are unfavorable for SSB, I can almost always carry on with CW, and with a significant margin to spare in terms of readability.

>It'll help the hobby more than any license class or any CW
>requirement, and remember, it started out as a hobby, still is, and
>will always be!

Which is exactly why CW should continue to exist as both a common mode of operation and a licensing requirement. Some of the newer digital modes may be more effective than CW in terms of pure communications effectiveness, but that comes at the expense of additional equipment, complexity and expense.

CW has no peer when both reliability and simplicity are considered. The fact that CW also requires operators to show a degree of genuine motivation before joining the ranks is a side benefit.

For Amateur use, all the factors must be weighed, not just one.

This is unfortunate. Morse abilities are only required for HF operations, with faster Morse and more difficult written tests required for additional HF operating priveleges and the priveleges of operating equipment in space and administering amateur exams. If you are not interested in operating HF, not interested in being a satellite trustee, and not interested in becoming a VE, why on earth would you want anything beyond the codeless Tech, even if you could?

If you want to convert CB radios to 10m and use them to chat with folks in South America when the bands open, by all means take your 5 wpm Morse test and get your tech-plus. If you'd like to tune up on any of eight HF bands and work the only RTTY station on the Falklands on 20m, go for the General. If you'd like to pass NTS traffic on the Texas CW net, and become a VE, go for the Extra. But if all your interests lie above 30 MHz, I would question your need for the code.

In all fairness, you did say "SOME extras...."

> Not smart
>enough? Hmmm... When was the last time I heard someone ask what the
>morse equivilent was for a particular letter? Then again, I cannot even begin
>to tell the number of times these same few people have asked me how to
>configure their computer to do this, or for me to write a program to do that,
>all related to ham radio of course...

The field of radio is big enough that you can be a radio expert and still need help with computers. Are you falling into the same fault which you attach to them, by assuming they should be at a certain computer proficiency just because they hold radio licenses? Someone who is an RF whiz and can build his own transmitters, receivers, and antennas from scratch would not necessarily have any need for computers. And when he finally takes the plunge, I would hope folks with your computer abilities would be around to cushion the shock, just as he should help you if you need to know who is the trustee of the machine you're on and you can't keep up with the CW IDer.

>...I do think some degree of testing is required, at least for a little while
>longer, although I'd like to see the morse requirement dropped. I for one have
>no plans to EVER learn code, even if it means I have to wait another 20 years
>before I can do HF... I have more constructive things to do with my time, like
>run my business, or worry if the sync pulse on my ATV unit is too high...

That's the whole idea behind incentive licensing. If the effort required to get on HF is not worth the benefit, maybe your interests in the hobby lie elsewhere. Plans can be changed, and HF will always be there for you should you change your mind. Even if it takes 20 years.

>This is an issue that will never go away until code is abolished...

Whoa, you want to abolish code? What will my Vibroplex and I do?

>If the
>'old-timers' are worried about the integrity and intelligence of the operators
>allowed to run HF, then how about replacing the HF requirement with a
>P.C. proficiency requirement...

I can see it now:
504a) If an ATV image of a beautiful woman is transmitted, you should:
1. Signal the wolf whistle
2. Ask for her fax number
3. Ignore it and remain professional
4. Notify the nearest FCC office
The most P.C. answer, of course is (3).

Seriously, though, you went on to explain what you meant by PC:

>Packet connections, RTTY, etc. A PC test could
>include sitting down at a computer and hooking a TNC up to a computer and radio,
>configuring the software and connecting to a node. Or, how about a requirement
>for Radio Programming proficiency?? It seems that many hams, both new-comers
>and old-timers have trouble setting up these new hi-tech rigs...

I find it interesting that you argue against the CW test elements, but suggest two other tests that have so much in common with the CW elements. The principal argument against the CW element has been that it tests the applicant in the operation of modes which constitute a subset of the hobby in which he may not have an interest at the time of testing. Your proposals would do the same, and I'm sure we would have similar arguments breaking out over them. Why should I have to show that I can operate packet if I have no interest in doing so?

> Does this mean that if I push 1 ampere onto the conductor with the
> force of 1 volt on the wire the resistor will do nothing but if I push
> it with a force of 100 volts it will only allow 1 volt to pass?

Nope, What the above definition means is, if you take a 1 ohm resistor, and
put 1 Volt across it, 1 Amp of current will flow.

Do read the section on Ohm's law, and do some sample problems like this.
Voltage = Current * Resistance

1. (the above example) 1 Volt = 1 Amp * 1 Ohm
2. (your numbers) 100 Volts = 100 Amps * 1 Ohm
3. (a different Resistor) 1 Volt = 1 milliAmp * 1 KOhm

Hope this helps, and Good Luck on your studies
John

I don't know, does anyone have a count of the number of CB rigs that
have been sold in the US?

Seriously, though the HR2510 did allow CW operation, it all but prevented
it by awkward channel spacing and the absence of any kind of standard key
connector. They sold 'em like hotcakes. The CW guys just weren't the
market segment they were going for.

I haven't seen this but I don't go to many hamfests either (usually just Dayton).
If this is indeed happening I agree with Steve that hamfest sponsors should
put a stop to it. It has NOTHING to do with ham radio...computers at least
have ham radio uses, but hard-core porn does not.

(more flame bait) The lewd/crude/obscene conversation on many of the HF
SSB bands is another area where there is real potential for giving newcomers
& especially kids a bad impression of hams & of ham radio in general. This
is harder to police than hamfests but I think it is another area where we need
to examine ourselves & decide what sort of impression we want to give
people. Failure to do so will surely result in us losing our bands someday
to business interests.

All it should take to see the comet is a clear night and knowing where to look. I live within 10 km of downtown Houston. This is one of the worst light polution areas on the earth. After failing to find the comet on Wed. night for not knowing where to look, I found it on Thurs. night directly between arturus and the horizon. About half way around 11 pm local time. Once I knew where to look, I was able to see it even without my glasses (and my vision runs near 20/200.) The disconcerting thing about comets is that they appear to be smudges on the celestial sphere. You develope an uncontrolled urge to try and reach up and polish the skies. This must be why the ancients ascribed malevolence to them... Since Friday, it has been cloudy and the comet viewing bad.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

[...]

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio
was renamed to during the first major reorganization. Any message that's not
more appropriate in one of the other groups belongs here, from contesting to
DX to ragchewing on VHF to information on becoming a ham.

[...]

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

4281. No CQ's On 75 Meters ??

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: jackl@pinetree.microserve.com
Message-ID: <4jeu7r$3j2@crash.microserve.net>
Source record: 228598

Two different people recently told me on the air that it's unusual to call CQ on 75 meters. They also said that a number of hams on the band consider a CQ to be bad operating practice, although they didn't know why.

Can someone explain this to me?

73,
Jack WB3U

>However, the cost to include a good CW capability in an SSB radio
>is not necessarily insignificant.

Geez, I can't win even when I agree with you. <g> An examination
of all the HF transceivers manufactured since 1970 shows that the
majority were made CW-capable by the addition of the following:

Sidetone oscillator
Key jack
Connections for optional CW filter(s)
Extra position on the Mode switch

Yes, a fully-equipped CW rig has much more, but I think that's not
really what we're talking about. Someone who never works and never
plans to work CW is unlikely to spend money for CW refinement in
excess of the features listed above. However, that same person would
probably still hesitate to purchase a rig that had no CW capability at
all. Simply put, no one wants to buy a new transceiver that is
immediately incompatible with what is perceived to be a basic mode of
operation used by other hams.

Thus . . . .

The arguably limited sales of an SSB-only rig does not mean that any
particular number of operators are still using CW (only a *perception*
that they exist in reasonable numbers is required), nor is it an
indicator of the life or usefulness left in that mode.

4284. Equipment to purchase

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <4jf2ek$8tv@usenet.srv.cis.pitt.edu>
Source record: 228601

Heya people - I just purchased an Alinco DJ-580T and need to pick up some accessories but I'm not quite sure of brand quality, what to get, etc

Incidentally, for those of you who don't know. The DJ-580T is a dual-band handheld transciever.

First off I want 3 different types of antennas. I want a mobile antennae for my car, preferrably magmount. Next, I want a better rubber-duckie as this short stubby one doesnt do me much justice(or does it? its an alinco EA0021 vhf/uhf antennae). Next I want one for my home - dunno if I have to hang it out my window. Can someone please explain the difference between 1/4 wave, 5/8 wave, etc? Which is the best?

Next, I need an amp - preferably one that handles dual-band but from what i've seen I'm not going to find a relatively inexpensive two band amp. My HT has normally like 3 watt output, 5 watt output with the bigger, better battery(which Ill be getting to). I definitely need the amp to cover the 140mhz region and I would like to be up around 30 watts from my 5 watt input. If a dual-band amp is too expensive, I don't really want to purchase a seperate amp as it won't get much use anyways.

I also need a battery. Ive seen several battery replacement type things in amateur radio and CQ but Im not quite sure about quality, total usage time per charge, total charge time, etc. It would help if you knew that my radio takes about 800ma 12V battery(optimally, I think I currently have a 800ma 7V) I need something fairly portable. Has to be able to fit in a jacket pocket or at least a convienent size for taking to/from car. My current battery lasts a couple days with a decent amount of transmitting/receiving.

Yet another thing I want to check into is a frequency counter. I bought radio shacks freq counter whenever it was on sale for 79.99. I found out it has become a piece of dog doo doo. Maybe I'm expecting too much of a freq counter. I want to be able to be across a mall (15 feet) and pick up the freq of a security guard transmitting from a 2watt handheld. I wanna be across the street and pick up a transmitting police officer. If I can't do these things I don't really understand the purpose of having a freq counter Now I tested the radio shack one outside, and in line of sight it picked up my 3watt trans freq perfectly.

Also - if anyone has frequency lists, outside of standard police call and beyond police call material I would love it... Pittsburgh Pennsylvania is the area.

Thanks for taking the time to read this, and thanks in advance to those who reply. Commercial replies welcome. If possible, please reply by e-mail as I don't always get time to keep up with the usenet groups.

Keith

4285. Info needed Kenwood RM-76 (for 7625)

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: mcduffie@unlinfo.unl.edu
Message-ID: <4jeqlc$lnc@crcnis3.unl.edu>
Source record: 228602

I have a pair of 7625 radios that I am trying to use in a remote base situation. Two of the digits of the frequency are controlled by bcd. However, the Mhz portion is not. I'm needing any information I can get to allow me to control the Mhz and +5 postions. The manuals, both owner's and service, are of no help. They don't contain info on the RM-76.

Any information I can get on this subject would be of help. My controller is bcd for all four digits, and I would like to get it interfaced.

Thanks in advance.

Please notice that my email address is NOT that from which this article is posted. Please use the address below if you send private email. I do read this group daily, so feel free to post to the group if you think others might be interested.

For once, we're in total agreement... it happens every now and again...

By the way, *I* think there's life and usefulness (if even just
recreational) left in CW. I just don't think CW is as important
to the licensing process as it may have once been. I believe we
could drop the CW requirement *entirely* tomorrow, and there would
still be plenty of CW activity in the ham bands ten years from now.

4290. What is this thing??

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: ag381@FreeNet.Carleton.CA
Message-ID: <4jf3lu$sls@freenet-news.carleton.ca>
Source record: 228607

I am repairing an Astro Communications Labs frontend for VHF.Thisunit was handcrafted in 1973 and a fine piece believe me.Except it does not work.

At the output of the plugin is an IF strip with the *last* 2 tuned circuits coupled by what looks very much like an old 1\4 watt resistor.At one end of this thing there is a good signal, at the other (which is the output) there is nothing.This thing is banded as follows;left red, center purple right white and far right silver.
Apart from the fact that one would not normally use resistive coupling between two tuned circuits I think it is not a resistor because the color code would result in a ridiculous value.Could it be an inductor?May be but I measure an infinite resistance across.A capacitor?
What is this thing that kills my signaL?
Thanks,Herb.

4291. DXer looking for ham to answer questions

With so many groups and individuals who lay claim or ownership of their spot on 75, where is one to go?

Someone told me once that it is unlawful to operate on 75 with less than 1500 watts. :-)

If you're speaking of coax, you can get a wall feed-through tube from (dare I say it?) Radio Shack and others. It is a plastic tube large enough for RG8 or RG11, etc. with bezels on each end (one fixed, the other removable). You just drill a hole, slip in the tube and reattach the bezel. You can then cut the tube shorter if you want. It works quite well, especially if you use some caulking compound to seal around it and aroung the coax.

QST de W1AW
DX Bulletin 17 ARLD017
From ARRL Headquarters
Newington CT March 28, 1996
To all radio amateurs

SB DX ARL ARLD017
ARLD017 DX news

This week's bulletin was made possible with info provided by Trey, WN4KKN, Scott, AA8SM, Cecil, NW8F, Richard, G0JFX/F5VCO, Jean Michel, F6AJA, Dick, K2UFT, Kiyoshi, AE4EZ, Tedd, KB8NW, Wayne, N7NG, the OPDX Bulletin, Chod, VP2ML, The DX Bulletin and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. Last chance to work Franz, 3W6GM. He goes QRT March 31 to return to Germany. Try 14198 kHz between 1100 and 1500z. QSL via DF5GF.

WESTERN SAHARA. Eddie, EA3NY, hopes to use a special S0 call sign for the WPX contest. Plans are to erect a tower and monobanders. He will try to work some CW and RTTY after the contest.

TONGA, A3. Morten, LA9GY, will be active as A35GY through April 4. He will be in the WPX contest. QSL via LA9GY.

CHRISTMAS ISLAND, VK9X. Martti, OH2BH, Leena, OH2BE, and Petri, OH2KNB, will sign VK9XM for five days starting April 6. QSL via JA1BK. The VK9XH Christmas Island and VK9CA Cocos Keeling DXpedition by Ken, AD4WF, has been cancelled.

TURKEY, TA. A group of German contesters will sign YM3DL from Izmir in the WPX contest. Before and after the contest they will work CW and SSB on 160 through 10 meters using individual TA call signs. QSL via Dr. Patrick Scheidhauer, DL4VBP, Fontanestrasse 134, D-60431 Frankfurt (Main), Germany.

MAURITANIA, 5T. Bernd, DK3LQ, hopes to be signing 5T5MB sometime in late March or early April.

NEW CALEDONIA, FK. Eric, FK8GM, will sign FK5DX in the WPX contest. QSL via WB2RAJ.

MALTA, 9H. Win, DK9IP, will sign 9H0DX during the WPX contest. Listen for him as 9H3WK before and after the contest.

CYPRUS, 5B. Work Frank, 5B4/DL8KWS, through April 10.

MADAGASCAR, 5R. Gerard, 5R8EN, is frequently on 7057 kHz, listening on 7240, around 1415z. He will work CW on request. He has also been spotted on 7006 kHz at 0345z. QSL via F6ARA.

TAIWAN, BV. BO0OKS will be on the air over the weekend from Kin Men Island, aka Quemoy Island. QSL via BV2KI.

SIERRA LEONE, 9L. Paul, 9L1PG, and Millie, 9L1MG, will be leaving 9L in mid-June. Paul will be spending time on 80 meter CW for those still needing Sierra Leone on that band. Millie frequently checks the 14226.5 net. QSL via NW8F.

GUINEA BISSAU, J5. J56CK and J56DY will be QRV until April 6.

MIDWAY ISLAND, KH4. NH6D/KH4 will be QRV for two weeks in April. This island will be abandoned by the military in 1997.

GALAPAGOS ISLANDS, HC8. Listen for Trey, WN4KKN, signing HC8N during the WPX contest this weekend. Before and after the contest he will sign WN4KKN/HC8. QSL via AA5BT.

ICELAND, TF. Belgian operators ON6QR, ON7PC, ON5OO, ON1KSZ, ON4KHG and ON4LAI will be active from Reykjavik, IOTA EU-021, signing TF/individual call/P now through April 2, including action in the WPX contest and a brief portable operation as TF7/ON6QR/P from Westman Island, IOTA EU-071. Look around IOTA frequencies 7060, 14260 and 21260 kHz. QSL via ON4GO.

GRENADA, J3. Joe, WB8GEX will be on the air as J3K April 5 to 12 on 160 through 10 meters.

UNESCO HQ. F5SNJ, F5OWK, OK1FWM, F1FNQ and F1PNQ will operate 4U1SCO for three days starting March 29 from UNESCO grounds in central Paris. This demo station will be on 80 through 10 meter SSB and CW, with a chance for some 160 meters, VHF and SSTV. QSL via F5SNJ. The call TM5SCO may also show up on the air.

PIRATES COVE. Current operations of KG4AA and KG4US are apparently pirates.

THIS WEEKEND ON THE RADIO. The CQ WW WPX Contest on phone runs from 0000z March 30 to 2400z March 31. For more info see page 97 of March QST.

Hi Tom,

It wasn't that I didn't know where to look, it was just that over here
in middle England it had been 10/10 cloud for over 14 days. However,
two clear nights Tuesday and Wednesday this week and as you say it is
quite a sight.

Best thing to do is trade the rig for a GE MSTR EXEC II...the MSTR II doesnt mod easily for 9600....the EXEC II does....(you have to FM the TX and the EXEC II radios are easier to mod to direct FM...the MSTR IIs will screw up the freq stability if you try to direct FM it).....

I may have a UHF MSTR EXEC II I would be willing to part with unless you can find someone closer to you to trade with...

4306. Re: Comments wanted: Standard C508a and other tiny HT'

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: andy@clark.net
Message-ID: <4jclgb$juc@clarknet.clark.net>
Source record: 228707

I bought a slightly used C508a at a hamfest 2 months ago. I've had dozens of different HTs over the years, but I can't remember one I enjoy more than this. The 2 alkaline batteries last longer than I imagined; when I feel wealthy (yeah, right) I put in a couple of AA lithiums which last even longer.

The receiver is excellent, limited only by the unusually short dual band antenna. The aircraft receive is the best I've seen yet, as is the 800 MHz pickup. Although I have no trouble hitting a few of the closer repeaters, I use the 508 mostly as a scanner during my commute. And as a scanner, it's the most fun scanner I've ever owned. Very inconspicuous, obviously.

For a rig this size, the audio output is not as bad as you might imagine. The unit itself, manufactured for Standard by Marantz, appears to be very solidly constructed. Aesthetically, it is considerably more pleasing than Standard's 2-meter monobander of the same size.

One feature I really like is the absence of the squelch knob. The squelch can be set to automatic, or to different S-units. I leave it on automatic (which Standard actually refers to as "off", and it works just great.

I have only 2 complaints about the rig, and they're both pretty lame:

1. The belt clip is really tight, and difficult to slip over a thicker belt. Since it seems to be plastic (but very sturdy), it's hard, if not impossible to re-shape it.

2. The APO (automatic power-off feature) shuts the unit down if it does not break squelch for the time period you select. I would have preferred the APO to shut the unit down if you did not press any buttons during that time period. As it is, it's possible for the unit to remain on forever as long as it periodically hears a station. Interestingly, some of Standard's other HTs work the way I prefer; I guess it depends on who the actual manufacturer is.

So yeah, I would highly recommend the 508. You'd be surprised at what 280 mw can do!!

Quite a few (most?) of the HR2510's sold were not sold to hams, and
there are probably more of them in use on 11 meters and in between 10
and 11 meters than there are on the 10 meter ham band.

One of the things I used to like about ham radio was the careful use of language that allowed hams to discuss the same things the other radio services were discussing, but with a touch of class. The topics were the same, the the choice of words permitted discussion on "family" channels and in "mixed company" without offending most listeners. Not so for the choice of words in the original post, and follow-ups in this thread.

I had the insurance from time to time; three or four years, then off for a couple, and then back on again. Last winter a water pipe froze and burst inundating my radios. The tube stuff stood up fairly well, but my prize pair of HRO-500 and matching HRO-600 got pretty much destroyed. The 500 is still fixable, so I did not ask for replacement (or $), but the 600 is REAL rare; I had it appraised; they said it was a total loss, and the Wohlers Company made good for $2500.
(The pair, in one cabinet, had been insured at $3100, out of total insured ham shack of about $11K).
No complaints here. They handled the claim professionally and rapidly once the appraisal came in --that took 4 mos, but not their problem.
Go for it

I don't think there's a direct connection between the number of hams using CW and the number of non-CW rigs that would be sold. Even if I only worked SSB, I would never buy a non-CW rig, simply because the number of potential purchasers would be that much smaller when I eventually sold it. For the same reason, no manufacturer would build an all-band HF rig without CW unless he had an idiot for a marketing manager. That's especially true considering the almost insignificant cost to include CW in a SSB rig. Anyway, if they did build such a rig, resultant sales figures might have little or nothing to do with the number of potential users who work CW.

That may be true, but that wasn't the question ;-)

On another note, there is the often quoted "38%" figure. This is the
percentage of amateurs that the ARRL concluded use HF CW, in a study done
about 5 years ago. So, if this number is to be believed, perhaps as many
as 60% of amateurs probably would probably consider buying an HF radio
without a CW mode.

Of course, this conclusion, like almost all of the others drawn from
the "38%" number, is probably best treated as vaporous speculation,
particularly in view of the considerably change the amateur population
has undergone since this survey was performed ;-).

I don't disagree with the notion that an amateur may wish to have
a feature in a radio, even if that feature is never going to be used.
I suggested 60% as an upper bound, but, in text deleted from the
above quote, observed that this, as almost any other conclusion
drawn from the "38%" number, is vapourous.

However, the cost to include a good CW capability in an SSB radio
is not necessarily insignificant. I know that I enjoy full break-in
capability (though my current radio is only semi break-in), and
the cost of including full break-in in a SSB radio shows up in several
places (the T/R switch, receiver AGC, transmitter keying). Also,
a decent CW radio, full break-in or not, really must include an
additional crystal filter for CW. Any radio with CW mode really
must include a sidetone oscillator, and a key jack. I'd speculate
the cost of adding a competent CW capability to a radio otherwise
intended for SSB only is not large, but not insignificant. If you
start adding frills, like an integral keyer or DSP filter, the cost
may even become large.

;-)

>a scanner, and a hands free cell phone in my vehicle, and I only
>want one external speaker.

This is difficult to do with passive circuitry because the signal from one radio cannot be allowed to feed back into the output amplifier of another. I can think of two ways to do this:

First, the output of each radio is fed to a high-value resistor (2-10,000 ohms). The opposite end of the resistors are tied together and fed to an audio amplifier that drives the speaker. Of course, this requires that power be applied to the mixer. If it is desired to separate the signals so that only one radio is heard at a time, some type of logic circuit would also be required.

The second method would work by sampling the output of each radio through a low-value resistor, say 20-50 ohms, and feeding each sample to a rectifier and filter. The output of each filter would drive a sensitive DPDT reed relay. One pole of the relay would connect the output of the active radio directly to the speaker, the other pole would be wired in a way to lock out all the other radios. There would be a *slight* connect and disconnect delay due to the filters, but this would be a totally passive system.

Unfortunately, I can't remember seeing any devices like this on the consumer market. You might try a commercial marine supply house. Larger boats often have multiple radios, so this may be a more common request in that industry.

Best of luck,

Jack WB3U

>Imagine that on 20 meters!

Jeff, I agree 100% that the code should stay. However, I think the
differences between 2M and 20M are due more to repeaters and
propagation than to Morse ability.

So do the add-on CW filters.
So do external audio filters (ask MFJ).
So do DSP filters.

: AB6MB

Jeffery,
If you could reword the above a bit, you probably would make more
friends. Leave the 'CB' part out. I can't imagine that 20 meters is
any different than 'CB' is right now. Do you ever listen to it ?
Radio police all over every DXpedition, U.S. stations who get so
excited about working a 'new one' they operate out of band. If you
ever get the opportunity, turn on a radio somewhere in the world when
the U.S. is on the other end. In a pileup situation, the Europeans
are worse than the U.S., but I can't imagine 'CB' or any other band
could be any worse than the ham bands when it comes to no manners
and lousy operating.
As for the 'technical content' of a ham test, it's already been
replaced by the 'memorize the answers from the book' plan. With the
morse code gone, and the answers to questions in print, we have a
different ham radio than we used to have, but why does it have to
'CB'? I would imagine THOUSANDS of hams who have been hams LONG
before the no-code licenses were invented are people who used to
operate on 11 meters. Me included. I had to get off 11 meters before
I got caught, and I wanted to persue radio as a hobby, so amateur
radio was the next logical step. I would bet a very large percentage
of hams who have been licensed for 20 or more years were at some
time on 11 meters, but I also imagine some wouldn't admit it.

Just because the people who are now influxing into the hobby
are DIFFERENT than you and I are, and have different interests,
doesn't mean they are in any way inferior. No-code techs are not
CB'ers, they are HAMS, just like you and me.
New hams don't need to be called CB'ers, they need to be
introduced some other aspects of the hobby besides two meter FM.
We have a lot of 'no-code' guys here - most aren't, and probably
never will be, interested in the same things we are. But if you
and a bunch of other people would drop the 'CB' junk, maybe they
would feel like they are at least in the same hobby as we are
and start looking for other things to do. It doesn't bother me
that you are upset because your hobby has changed, a lot of people
are. If I still lived in a high stress environment like the U.S.,
I probably would be upset too. But it has changed. The 'old days'
are over. Nobody will ever reinstate the code test and burn all
the answer books. We have a 'motto' for life out here in the
Pacific, which consists of only two rules:

1. Don't sweat the small stuff.
2. Everything is small stuff.

Try it, your blood pressure might return to normal.....

4324. GB2RS News 31st March 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <828032778snx@llondel.demon.co.uk>
Source record: 228725
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 31st of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Radiocommunications Agency and SSL presented the first of the new "M" series callsigns at a ceremony in Bristol yesterday, Saturday the 30th of March. M0AAA was issued to the Reading Novices' Amateur Aerial Association, with the licence being presented to club members Paul Sayer, G0VKT, and Ben Clarkson, G7WHO. Ben, aged 14, recently upgraded from his Novice callsign 2E1DHA, and is an active member of the Reading and District Amateur Radio Club. The first "M" series Class B callsign, M1AAA, was presented to Ian Oliver.

The Reading and District Amateur Radio Club will be activating M0AAA and MX0AAA from Zero hundred hours BST on Monday the 1st of April. The station will be active for much of the first week of April and a special QSL card will be available for the first one thousand contacts. For further details contact Peter Swynford, G0PUB, whose address is correct in the RSGB Call Book, or call him on 01734 617388.

An RSGB Regional Open Forum meeting will take place on the 26th of May at Rivenhall Village Hall, Church Road, Rivenhall, Witham, in Essex. RSGB President Peter Sheppard, G4EJP; Executive Vice-President Ian Kyle, GI8AYZ; and Zonal Council member Fred Stewart, G0CSF, will be attending, as well as RSGB Liaison Officers and a representative from the Datacomms Committee. Further details can be obtained from Fred Stewart, G0CSF, whose address is correct in the latest RSGB Call Book.

RSGB President Peter Sheppard, G4EJP, will be the guest of honour at the first meeting of the newly-formed Louth Repeater and Packet Group at 7.30pm on Tuesday the 2nd of April. The meeting will take place at the Greyhound Public House at Upgate, Louth, and all are welcome. The group was formed to help support the 70 centimetre repeater GB3LC, and to plan to apply for a 24 centimetre and 3 centimetre TV repeater and packet node. For further details contact Roger, G4IPE, on 01507 602220.

A new GB2RS news broadcast starts next Sunday, the 7th of April, covering the Telford area. The newsreader will be G3JKX, and the broadcast will be at 1200 via the GB3TF 70 centimetre FM repeater on channel RB8. Reports will be welcomed by the newsreader.

"Kidlink '96" takes place on Thursday, Friday and Saturday, the 2nd, 3rd and 4th of May. Schools are invited to put on stations so that youngsters, especially those between the ages of 10 and 15, can use amateur radio to communicate with their peers in this country and

overseas. For further details, contact Peter Daly, G0GTE, on 01438 724991.

A new RSGB Liaison Officer has been appointed for Counties Londonderry and Tyrone. He is John Crichton, GI4YWT, whose address is correct in the RSGB Call Book.

Groups intending to take part in the RSGB's National Field Day contest on the 1st and 2nd of June are reminded that they must register, by sending details of the site to be used, by the 9th of April at the latest. Send the details to David Hill, G4IQM, whose address is correct in the RSGB Call Book. Please enclose an SAE if contest stationery or an acknowledgement of entry is required. Listeners to this broadcast are asked to remind their Club Secretaries of the 9th of April deadline. For further details see page 4 of the RSGB Contesting Guide, which was published in the September 1995 RadCom, or call David Hill, G4IQM, on 01293 882641 weekends or evenings.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Saint Helena, Andy Chadwick, G4ZVJ, plans activity as ZD7WJ from the 29th of March until the 12th of April, CW only. Check around 1827, 3503, 7003, 10107, 14027, 18077, 21027, 24897 and 28027 kHz, listening up. Andy goes on to Ascension Island, where he will be active as ZD8VJ, on the 16th of April.

From Sri Lanka, HB9BRM is signing 4S7BRM from now until the 17th of April. Activity is on all bands, SSB, Amtor and Pactor.

And from Cyprus, DL8KWS is signing 5B4/DL8KWS from now until the 10th of April.

Next the Rally News:

The Magnum Radio and Computer Rally takes place at the Magnum Leisure Centre, Harbourside, Irvine, Strathclyde, today Sunday the 31st of March. The event features the usual traders, an RSGB book stall and membership information stand, and Morse tests on demand. Doors open at 11.00 am.

The Thames Valley Electronics Rally takes place at Kempton Park Racecourse, Staines Road East, Sunbury on Thames, in Middlesex today, Sunday the 31st. The event features retailers, antenna and accessory suppliers and a bring and buy stall. Doors open at 10.30 am.

Next Sunday, the 7th of April, the Feltham and Hounslow Sea Cadets Computer and Radio Rally takes place at the Feltham and Hounslow Sea Cadet Corps, 2 Popular Way, Feltham, in Middlesex. Talk-in will be provided on 2 metres channel S22, and for further details ring 01784 456486.

Now for the HF contest news:

The CQ WPX SSB Contest is taking place this weekend. It started at zero hundred UTC on Saturday and continues until 2400 UTC tonight. This contest is on all bands from 1.8 to 28 MHz, with the exception of the three "WARC" bands. All stations can work any other station, and the multiplier is the sum of all the different prefixes contacted.

The first of five sessions in the RSGB Slow Speed Cumulative Contest takes place tomorrow evening, Monday the 1st of April, from 1900 until 2030 UTC. Send CW no faster than 12 words per minute - and never faster than the other station is sending - between 3540 and 3580 kHz. Novices are particularly encouraged to take part part. The second session is next Tuesday, the 9th of April. The rules are in last September's RadCom.

Next weekend, the 6th and 7th of April, the SP DX contest takes place from 1500UTC Saturday for 24 hours. Brief rules are on page 21 of the April RadCom.

And next Sunday, the 7th of April, the first RSGB Ropoco Contest takes place from 0700 to 0900 UTC. The rules are in last September's RadCom.

Next some VHF contest news:

The first of three sessions in the RSGB 144MHz SSB Fixed Station Cumulative Contest takes place on Tuesday the 2nd of April, from 1900 until 2100 UTC. The second session is on Wednesday the 10th of April and the rules are in last September's RadCom.

And the RSGB 1.3 and 2.3 GHz Fixed station contests take place next Sunday, the 7th of April, between 1700 and 2100 UTC. The rules are in the September RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS:

The period from the 18th to the 24th of March saw solar activity increase to low levels. The geomagnetic field was up to "active" levels. Sunspot numbers declined to zero by the 20th as one small sunspot group disappeared, but on the 21st another group appeared and by the 23rd sunspot numbers were up to 24. The mean was 12. Solar flux levels averaged 71 units but were up to 74 units on the 22nd. Several small B class solar flares took place on the 22nd. On the 23rd, solar activity increased to low levels by virtue of a single C1 solar flare. Electron fluence levels increased from a high level to a very high level by the 23rd. X-Ray flux levels increased from A1 units to A1.6 units on the 23rd, with an average of A1.1 units. The 90-day solar flux average on the 24th was 73 units, the same as last week.

Geomagnetic activity was mostly "unsettled", but did increase to "active" levels on the 21st with an Ap index of 22 units. The average was Ap 13 units. The following data covers the period from the 12th to the 18th of March. The aa indices, as supplied by the British Geological Survey, started at "active" levels with 40 nanoTeslas on the 13th, but then remained at "unsettled" levels. The average was 22 nanoTeslas.

I'll repeat the figures: spots - 12, flux - 71, Ap - 13, X-Ray flux - A1.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies, as reported by Meudon for the period from the 15th to the 21st of March, saw levels around 6.4MHz each day except on the 21st, when they increased to 7.4MHz. The average was 6.5MHz. The darkness hour lows declined from 3.1MHz on the 17th to 2.3MHz by the 19th, with an average of 2.8MHz. The daytime highs took place between 1100 and 1800 hours with the darkness hour lows at 0500 hours every day except on the 18th, at 2100 hours. Two hours of blanketing E took place at daybreak on the 18th.

I'll repeat the figures: highs - 6.5MHz, lows - 2.8MHz.

And lastly the solar forecast:

This week the quieter side of the sun is expected to be looking our way, and even though there may be days when sunspots are visible, solar activity is expected to remain at very low levels. Solar flux levels are expected to be around the 70 mark. Geomagnetic activity is expected to be at "quiet" levels right up to next weekend when conditions may increase to "active" levels. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels may be slightly higher some days. The darkness hour lows may show signs of improvement now the nights are becoming shorter and shorter. Also the daytime highs are expected to take place in the evening period now that the seasonal effects are taking place.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 X-Ray Bravo and G7 Whisky Lima series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Victor series.

Subject: HAM RADIO IS A CALLING

G>Many non-hams are still surprised to learn that they could get an amateur
>license without a Morse test. This is a failure of marketing. Many others,

Funny, when I entered the hobby, (I have been licensed since
1983) if you had an interest in RADIO per se, YOU found ham radio,
not the other way around. My point is that there is no need for
marketing if the interest is there. If it is not, there is no amount of
marketing you can do to win a person over. In other words, the people
will come if they want to-ham radio is not a new "flavor" of ice
cream-it's a calling.

I'm looking for a Summer Camp in the USA for a 12 year old girl.
She wants the camp to have the usual camp activities and ham radio.
Included should be a license preparation class. At the end of camp
she wants to have passed the Tech-Plus tests.

Do you know of a summer camp with ham radio activities?

>complexity and expense.

My point is that it shouldn't be a requirement for HF priviledges since the HF bands are not all CW... Isn't it silly that one must learn CW, even if they have no interest in doing CW just to be able to operate long-distance phone or data?? How can you say additional expense?? You still have to purchase a key? Some opt for the memory keyers and either of these can cost as much as a new TNC! I'd say that at least a third of all hams own computers, and if the object of the no-code license is to attract the computer type, then it seems as though no-code with computer proficiency go really well hand-in-hand.

>CW has no peer when both reliability and simplicity are considered.
>The fact that CW also requires operators to show a degree of genuine
>motivation before joining the ranks is a side benefit.

What ranks?? I interpret that as though operators who passed the code requirement are elite, thus better? I think not!

>For Amateur use, all the factors must be weighed, not just one.
>
>73,
>Jack WB3U

All factors are being weighed! Here's another, what about the psychological aspect of this issue? Has it ever occured you that the to the older hams don't

want to give up something they've worked for? It's human nature to feel superior to someone when you've accomplished something that someone else hasn't, and when that 'advancement barrier' is removed then you no-longer feel like you're in a dominant position! Not all people have the quick-thinking skills to learn CW, should they be held back?

Remember, at one time getting a drivers license meant you had to demonstrate the ability to fix your own car! Because that's not required today, are we worse drivers than we were 75+ years ago??

The more-code requirement WILL be dropped, it's no longer a question of 'IF' but now a question of 'WHEN'...

I believe that's too extreme, John. I've been working on tiny SMD
stuff like this for a few years now (Sony Broadcast's field cameras
also use these smaller parts). I know that the parts look like grains
of salt, but you can successfully replace them without overly elaborate
tooling. I've done field repairs with just a 8 power jeweler's loupe,
a *sharp* pair of tweezers, a bit of Solder Wick, some SMD soldering
paste, a wooden toothpick, some modeling clay, and a Weller Pyropen Jr
as the static hot air source.

Of course it's easier with a 30x stereo microscope and a Pace hot air
source and vacuum pickup, but it is mostly a matter of technique rather
than equipment. My $50 setup is nearly as good as the $1500 rework station.
You can *not* use a soldering iron, micro or otherwise, on these little
parts. You must have static hot air.

To remove a part, form some modeling clay around the part so that other
components won't be exposed to the hot air source, form the hot air source's
tip to fit the part, apply the hot air source for a moment, and lift the

old part off with the sharp tweezers. Now use the Solder Wick to clean the pads, apply a bit of SMD soldering paste to the pads with the toothpick, set the new part roughly in place with the tweezers, and apply the static hot air source for a moment. When the surface tension of the solder pulls the part into alignment with the pads, remove the hot air source and allow to cool. Now remove the clay dam and you are through.

Note that it helps if you have a strong halogen work lamp, and you need wrist and forearm rests to keep your hands steady enough. I also wear a breathing mask to keep my breath from blowing the part out of alignment. But this is really a lot easier than most through-hole part replacements. It's much less likely that you'll damage the part or the board with SMD than it is with DIPs. I'd much rather do SMD repairs than either DIP or tiepoint construction repairs.

Note too that when doing troubleshooting of these types of circuits you need *very* sharp test probes. Sewing needles generally aren't sharp enough, but I've found I can touch them up with an Arkansas hard stone so that they can be pressed into service as test probes. Use gold flashed fine darning needles and you can silver solder wirewrap wire into the eyes of the needles to form test leads. Glue on round toothpicks to form handles.

>be appreciated. A schematic for this rig would probably bring tears to
>my eyes. :)

Give us the combo number for the rig and we'll be able to tell you exactly what you have. The Mastr II is an excellent radio, and manuals are commonly available at larger hamfests. Hi-Manuals will also sell you a photocopy, and you might even still be able to get a new one from GE/Ericsson.

The flies in the ointment for using these rigs for 9600 baud packet are twofold. First, the radio uses phase modulation, which won't do for 9600 baud. You have to insert the modulation through the Channel Guard port, and modify the Icom for more deviation. If you do this cleverly, with an opamp, you can also sum in the temperature compensation voltage and retain commercial stability in the bargain. Be sure to strap the reactance modulator to a stable voltage, or it will introduce phase jitter in the signal from random noise fluctuations.

The second problem is a little harder to fix right. The receiver IF filter is too narrow, and there will be considerable phase distortion of the eye. I don't know where to get wider drop-in filters. There is a kludge that works if you aren't in a high signal area, however. That's to just bypass the IF filter with a gimmick capacitor. Better is to fit a wider filter, though you are going to have to adapt it, use a bit of perf board. Murata makes suitable filters. (Note, if you're using these radios for links, you *can* just lower the deviation until the eye straightens up and set it there rather than reworking the filters. The SNR margin is degraded slightly, but BER will be better due to the lack of phase distortion.)

The demodulator used by these radios also makes netting a little tricky. You do *not* adjust for channel center by adjusting for zero volts from the demodulator. The demodulator rests at about 2.5 volts. GE gives a different procedure in the manual for netting

these receivers. You should follow that unless you're very experienced
with these radios.

>help. Does this sound like RF feedback, or something else? What
>solutions do you recommend? Thanks in advance...

Yes, this sounds exactly like RF feedback into the power supply.
It is either throwing the regulators off, or directly triggering
the crowbar circuit, IE the power supply thinks it is putting out
excessive voltage and shuts itself down.

The *best* solution to this problem is to use a balanced antenna,
IE dipole, and get it *outside*. That does two good things. First
a balanced antenna doesn't need a counterpoise, so it won't leave
the coax and rig hot with RF. And second, it gets the near fields
of the antenna away from shack wiring so less RF is induced directly
into the power supply.

Failing that ideal solution, you can try filtering all the leads
in and out of the power supply to try to keep the RF from getting
in there and doing mischief to the voltage regulator. Wrap the
cords around ferrite bars or toroids, and bypass the leads with
600 volt 0.001 disc ceramic capacitors.

If all else fails, buy a deep cycle marine battery and run off of
that.

>take a formal rulemaking for the FCC to demand full monitoring of
>all internet US boundaries).

The problem with that reasoning is that, as with the CDA, Congress
can *mandate* an action from the FCC. Then the public comment on
rulemaking is moot. They'd *have* to impose the regulation whether
the public likes it or not, or whether it is practical or not (see
ECPA). Of course that leaves the avenue of the courts, but unless
Congress did something provably unconsititutional in drawing the law,
there's little the courts can or will do. As example of that, see
certain Customs regulations. The courts give the government wide
latitude in what they can do at the border.

Install PVC conduit in the wall (the largest that will fit). This
will let you pull in new cables when that becomes desirable (it
will as the old coax deteriorates).

What IF does the Mastr II use? The Mastr Exec/Custom MVPs I've
tinkered with use a single 11.2MHz IF - my Murata catalog doesn't
list anything quite like this ;-).

Not silly at all; in fact, the CW tests are the only remaining requirement
for an amateur radio license that tests a person's ability to DO something,
rather than just spit out answers to published multiple-choice tests.

> ... if the object of the no-code license is to attract the
>computer type, then it seems as though no-code with computer proficiency
>go really well hand-in-hand.

First, why would you assume that a person's ability to send and receive CW
has anything to do with his computer proficiency? And who said the object
of the Technician license (as we now have it without CW) was to attract
computer types?

>... Not all people have the quick-thinking
>skills to learn CW, should they be held back?

We're talking about 5 WPM for goodness' sake! That doesn't take quick-
thinking skills, that just takes a little good old fashioned effort. Yes,
to get on all bands and all modes you must pass 13 WPM, but again that's
only a moderate speed and less than a year working stations all over the
world on CW is plenty of time to get up to 13, and you can go all the way
to the Advanced ticket with that! If my slow brain can handle 15 WPM,
anybody's can.

>The more-code requirement WILL be dropped, it's no longer a question
>of 'IF' but now a question of 'WHEN'...

Well of course it has already been dropped. You can, without taking a CW
operation test, get on 6m and above and get into all sorts of facets of
our hobby. You can even work skip AND CW. The 5 WPM it takes to work HF
is so slow it's scary to think we're even arguing about it.

Gary,

I'm impressed. Not only by your makeshift equipment and your boldness
in going in there, but by your eyesight! You don't mention any sort of
magnifying glass. Don't you go blind?

One more thing for people who may emulate your approach, I suggest taking
some anti-static precautions.

John

Welcome to the Internet. I once saw it described in a cartoon as a
12-lane superhighway gridlocked with garbage trucks. That is too harsh,
but it often applies. The "Net" is a self-selecting group of people.
Some of us are on here to exchange ideas and get information. Many
others simply like to debate or lecture, and will often provoke others
just for the sheer pleasure of a good fight. And because people are
not face-to-face, they will indulge in rudeness most would never
think of doing in person.

Remember Theodore Sturgeon's Law: "Ninety percent of everything is crap."
That applies here, too. Since it's easy to scream at the whole world with
a few keystrokes, there's a lot of nonsense posted.

The best thing you can do is ignore or filter out the garbage, and get
what you can out of the other ten percent. A news reader that sorts
messages by subject lets you select only what interests you. A "kill
file" lets you filter out subjects and authors you don't wish to
encounter again. Used wisely, they make the Net much more pleasurable
and informative.

But I must say I'm glad I'm online. Every so often I pick up a good
technical tip. I keep in touch with happenings in the classical music and
theatre world, and even made a couple of lasting friendships online. I
learned most of what I know about satellites on the Net. I've had a ball
watching Comet Hyakutake using a star chart and schedule I downloaded from
the Web, and I've been looking at comet pictures from all over the world
(with stuff like that, who needs pornography :-)

After a while, some people's outrageous behavior will cease to bother you.
It just comes with the territory--and sometimes it can be good comic relief.

73,
Peter - KD7MW

4343. Re: HF sucks!

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-28 00:00:00 UTC
From: herb@alpha1.csd.uwm.edu
Message-ID: <4jelvr$6ls@uwm.edu>
Source record: 228744

Nathan Ryan Gingras (herb@alpha1.csd.uwm.edu) wrote:
: Hey, all those no-code HAMS who complain about not getting on HF are not
: missing anything! Why would anyone want to be on HF? The conversations
: are always empty & meaningless, containing only the following standard info:
:
: 1) The Weather
: 2) Type of Radio
: 3) Signal strength
:
: The only in depth conversations I have ever had on HF were with people
: within 20 miles. You could use 2 meter, or 440 for that, and spend less
: on gear! What is the point of yelling CQ CQ CQ (or ponding CQ CQ CQ) just
: to get a stupid qsl card?
: As far as the three items listed above,
:
: #1, weather = You can watch TV for that.
:
: #2, radio gear = Who cares?
:
: #3, Signal Strength = Who Cares?
:
:
: The only good HF is QRP, because at least you are accomplishing something
: somewhat outstanding. Buying a $2000 rig accomplishes nothing, but
: wasting money. Anyone can work across the contry on a big 100w rig with a
: huge antenna.
:
: HF offers little enjoyment to people who are more than 'postcard
: chasers'. Even CB'ers, whom HF'ers seem to think are inferior, carry on
: more interesting conversations.
:
:
: Nate's suggestion for improving HF:
:
:
: 1) Instead of code, require a test in socialization & conversational skills.
:
: 2) Allow no more than 50w 40m and below.
:
: 3) Make it illegal to talk about root canals (noone cares!)
:
: 4) Require a physical & hygene exam! (I get sick every time I go to a
: HamFest!)
:

:
: Just my thoughts. No-coders, you really aren't missing much, so if you
: can't learn code for whatever reason, don't sweat it! You can get better
: looking postcards at the corner drugstore, and you can have better
: conversations with local trees, and other vegitation.
:
:
: Nate.
:
:
: Oh, yeah, you HF'ers are all going to look up my callsign, and to save
: you the trouble, it's KB9LSX, and I am NO-CODE. But believe me, I've
: worked my share of HF, and thus I have not upgraded.

Barry,

This is a sad story indeed. Is there anyone in out here that can contact this rip-off artist and help Barry get his TNC or money back? As you can see Barry is disabled. Here is Martin Durhams address and such:

WT1S Martin I. Durham
404 Spruce Cir.
Jordan, MN. 55352
DOB: 14-APR-1964

I hope someone local to this address can help Barry.

4346. Wanted Traegar SSB5 service manual

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: David Moss <moss@sna.dec.com>
Message-ID: <315B0977.1CFB@sna.dec.com>
Source record: 228623
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.misc,aus.electronics,aus.radio.amateur.misc,sci.electronics.repair

Hello,

I'm looking for a circuit schematic or service manual for
a Traegar SSB5 'portable' HF SSB transceiver. This is a
product of the early 70's (based on the date codes of the
chips in it)

If anyone has any suggestions, please also copy me
on moss@sna.mts.dec.com, because I seem to lose frequent
news messages.

thanks

4347. Again: FT-5200

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC

Please help me to fix this problem :

I try to open out-of-band receive for my FT-5200
by keep pressing "D/MR", "F/W" and "REV" button while
power switch on. But then my rig locked !

I can't turn this stuff off by pressing power button.
All front panel buttons also dont work.
I already try to press RESET button but also don't fix the problem.

I need the rig working, so please... please... somebody help me...

Thank you so much...

-jps

4348. 2meter transverter problem on hf rig

4351. QRO Merchants

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: Hans K0HB <71111.260@CompuServe.COM>
Message-ID: <4jfo94lgp1@mhade.production.compuserve.com>
Source record: 228628
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

In light of all the heat and smoke here lately about
"QRO merchants" and "high power contesters", it was
interesting to note that the results of a recent major
ARRL contest show only 18% of the stations used high
power (more than 150W). (Sample size = 3,032 entries.)

7% ran less than 5W, and the remaining 75% ran somewhere
between 5W and 150W (most probably 100W).

Monty Wilson (mwilson@bangate.compaq.com) wrote:

: Seriously, though the HR2510 did allow CW operation, it all but prevented
: it by awkward channel spacing and the absence of any kind of standard key
: connector. They sold 'em like hotcakes. The CW guys just weren't the
: market segment they were going for.

Monty, the Uniden HR-2510 is really not aimed at the ham market, but rather the CB/"freeband" market. A simple mod unlocks the CB 40 channels and transmit down to 26 MHz.

But it is still useable on 10 meter CW, if you know its quirks and are willing to wire up the klugey molex-type connector for the key. In the CW mode, it recieves BOTH sidebands of a CW signal, so switch to LSB for zero-beating. I also find weak CW signals are actually easier to copy in the sideband mode.

Yes, it's a bit of a hassle flip-flopping between CW and LSB for RX/TX, but IMHO this is the best of the 10 meter "mobile" rigs and it is fun to use once you know its quirks.

I have a slight variant of the HR-2510, called the President Lincoln, which has externally variable CW, FM and AM RF power, from about 1 watt to 10 watts, unlike the fixed 25 (?) watts of the 2510. I've used mine for ten meter CW QRP while "mountain-topping" with a small battery pack. Nice little rig, and for recieving SSB, it has a better reciever than my Icom 735.

Everyone else, sorry about the topic drift.

73 from Leigh/KM6JE.

4353. Re: THEY CHARGE TOO MUCH TO G

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: robert@kd3bj.ampr.org
Message-ID: <robert.828071328@kd3bj.ampr.org>
Source record: 228630

Regular flea markets don't cost anything to get in because the sellers carry the freight. That is possible because the property owner runs the flea market often, usualy weekly or more often. A club doesn't garner that much running a one time per year event. Have you checked the price of admission to the auto show, boat show, or computer show lately? $7 is cheap (the computer show) $15 for the boat or car show is normal. And the food is even more expensive and worse than at the average hamfest!

Actually, they're not. The F.C.C. is accepting money in exchange for
licenses. A license isn't a deed of title and it can be modified or
restricted after the fact (or even revoked).

<stuph deleted.>

Why should you have to learn the monkey code just to be respected? You have one up on Hardcore HF'ers allready; You have a life!

The only reason I can see for keeping morse code is to make HF accessable to (dedicated?) select 'elites'. (I use these terms loosely). But I see nothing elite about using a method of communication that apes are taught for the retreaval of food rewards. Don't waste your time! Set up a High speed packet network instead. That would be more impressive than the ability to copy beeps.

> is the problem with my transverter or my hf rig?.

About 12 years ago I had exactly the same problem with the FT757GX
(the Mark 1 variety) on HF SSB, especially 10m. There was always a
"quacking" noise coming out of the speaker as I spoke.

The dealer proved to me that the problem was due to poor regulation on
my (homebrew) 12v DC power supply, though I found a better long-term
solution was to sell the rig and buy an FT107M instead.

It seemed odd at the time to design a rig for 12V operation that was
that susceptible to power supply variations.

I agree.
I bought my 508 at Dayton last year, and have really enjoyed it.
No DTMF, but loaded otherwise. It even has a 1750 Hz tone for European
operation.
Batteries last a long time, and the receiver is very sensitive.
Someone even has a fix to open up cellular receive, making it a 60
memory scanner.
Meyer.

There should be no reason to figure out how to do it. I was complaining
that hamfests were starting to look like arts and crafts fairs for years
before I started seeing adult CDROMs at the computer vendors. Getting rid
of the knitted dolls, beer cans and so on sounds good to me.

Just one thought on that, make sure that the operators of the hamfest
aren't legally responsible for what is publically displayed in an area
that is supposed to be under their control. If the guy refuses to leave
or remove the objected to material from his display when the club
organizing the hamfest tells him to, then call the cops. Be prepared to
refund him is table rental fee, at least, if it isn't made clear in the
rules for vendors that the club will be censoring the material sold, as
suggested elsewhere in the thread it.

How many times do I have to read messages from hams that send a "Thank You" addressed to ALL. When one seeks help and someone takes the time to respond, the least the receiver of help can do is send a simple individual reply for thanks. After all-the respondents to this call for help responded one by one. I have received up to 75 messages in a call for help and sent individual thanks to each. It was very time consuming, but it was the right thing to do.

Would you at your wedding, if you were the groom, get up at the end of the reception and yell out, "Gee, Thanks everyone for the gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to respond to someone who H E L P E D you.

>

In addition, there was the Heathkit HW 12, 22 and 32 series of monoband SSB-only rigs. I suspect, however, that their popularity was more due to that this was a reasonably priced option to getting SSB capabilities, rather than to save a few pennies from not having CW. I suspect that the market for these radioes fell out when Heath introduced the SB- and HW-100 series.

It would be interesting to spectulate on the market penetration for a CW only rig by the mainstream manufacturers. I suspect that it would be much less that a SSB only rig, but that is my opinion only. Further discussion or speculation or both would be interesting.

> All front panel buttons also dont work.
> I already try to press RESET button but also don't fix the problem.

Now I find the problem is not because of expanded receive freq.
But maybe something else. The new problem is :

When I connect a speaker (internal or external) then the rig seems 'hang'.
Dial knob still work but no button does including mic up/down button.
The rig works properly if I remove any speaker from the unit. :-(
I also try using earpiece with high impedance coil, but also can't help.

Is this called 'electro-static' problem ?
Anyone has idea for this ? I cannot fix it yet....

Thank you...

Esperantist? claim that Esperanto is a well thought-out language. Maybe.
Did they go to a group of speech pathologists and ask these questions:
What sounds do young children have trouble learning?
What sounds are easily confused?
Did they go to a group of audio engineers and ask these questions:
What sounds require a lot of bandwidth in order to be clear?
What sounds are hard to distinguish in the presence of distortion?
What sounds are hard to distinguish in the presence of noise (like weak-signal 2M SSB)?
I don't think that the creators of Esperanto did ask those questons because the very name points out defects in the language--it has not been well enough thought out to eliminate difficult-to-learn sounds and easily confused sounds.
Anyway I suspect that most trekkies are a lot more interesting than esperantists, who probably are still holding on to their original 68000-CPU Macs with 2 MB of RAM and a single floppy drive.

4373. Differences between HF and VHF (was: HF sucks)

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <4jgp6e$hrv@cville-srv.wam.umd.edu>
Source record: 228650

What we know as VHF FM is a generally localized form of communications. High-quality, relatively short-haul communications between a number of people on a common channel. These people are often well-known to each other - "I talk to them EVERY DAY!" And I do, indeed, have a group of people I talk to on my way to and from work, and there is a good deal of camaraderie as we know each other pretty well. We're pretty "loose."

HF is very, very different. If you ride on a bus, and meet someone for the first time, do you say, "Hey, can you believe what that flaming jerk &$*&T*@ did?!?"

I don't think so. In your "clique" on the repeater, everyone would know what you were talking about. But to come off like that to a total stranger? No way!

The difference is that while one may get to know people on VHF very quickly, getting to know them via HF requires

1) being on same band
2) being on same frequency
3) being on at same time

i.e. having a schedule set up, like a 2-person sched or a net. I GUARANTEE you that the conversation carried on during scheduled QSOs is nothing like what people hear on HF most of the time.

So why are these things hard to find?

1) HF is a big place - many more "new contacts" than scheduled contacts.
2) If propagation is poor (and it does vary) there may be someone on each end but no way for them to talk.
3) They're not if you know where to listen.

Listen to any 80m NET where people know each other. They're MUCH more interesting than 2m contacts. And as for illnesses, well, a lot of older hams have their illnesses in common. Something to talk about, I guess. BTW, I have this occasional shooting pain in my left arm...

In conclusion:

Much of HF operation is done via CQ, which means meeting
a continuous stream of "new people." What percentage
of the time that someone answers your "XXXXX Listening"
on a given repeater results in a reply from someone
you DON'T know? Probably not even 40%, while on HF
it may be close to 90%, maybe more!

>least $50 a set. And since I have never seen any of those radios with
>"dual band" features, he's gonna need two (no room left in the trunk for
>luggage).

I suspect most hams only use a few channels, and the extra channel
capacity of most ham rigs is wasted. One would hope that he would
buy a bag of channel elements from the same source as the radio,
I usually pay a quarter a piece for them. Crystals will cost $10
of course, but that's not bad when you don't need many. The radios
are larger than most amateur radios, but the control heads are
small. You can usually find a place to mount them in the trunk that's
otherwise wasted space, so I don't think that they have to take up
important room.

>I agree that alphanumeric displays and other bells and whistles are luxury
>items that should come second to performance - and even then, I question

>some of their real value. But I think that "solid communications" can be

>get from a commercial rig. But then for $200, this guy might get what he
>wants with an amp - and depending on how he installs, it could be clean,
>neat and easy to use.

Well, yes, he could spend $400 for a used amateur dualbander, but
he'd only spend $260 for two Micors and crystals. He'd then have
two solid 80 watt radios that would serve him well for years, and
wouldn't have the IMD problems of amateur gear. I don't think an
amplified HT can compare to that. Note too that if he buys a
Syntor, there are some fellows on the left coast selling a control
head for them that gives them memories, scanning, etc, just like
the amateur rigs, but with commercial performance.

>IMO - About the only thing you gain by going to a Micor/Mitrek/Mastr type
>of radio is ruggedness. But most hams treat their radios with more care
>than the average refinery/pipeline/contruction worker, so I would go with
>frequency agility, power control, ect. My only use for commercial gear in
>ham radio is fixed stuff - repeaters, etc. - they're good for that.

The commercial gear is rugged, easy to repair, has good power, usually
excellent thermal design, and is almost IMD free (which isn't true of
very many amateur rigs), but best of all it is *cheap*. You can easily
fix it yourself if need be, but it is cheap enough that you can just
pitch it and get another if it breaks. No need to worry about warrantees,
or hassle with sending this stuff to the factory for service (not that
it is likely to need it).

The low cost (and the dents and scratches) also tend to make you more
willing to heat up the soldering gun and add modifications, something
many won't do to their shiny new Japanese rigs. There's plenty of space
inside to tuck away your ideas too. These commercial rigs are the perfect
foundation for experimenters. For example, you could fit a DDS board into
a Mastr II and have a radio just as computer agile as any Japanese box,
but with much better basic RF performance.

Perhaps this isn't the way he wants to go, but it is a good way to go,
and one more hams should consider seriously. I think too many are snared
by the slick advertising, and the unnecessary bells and whistles, and
don't really think about what they actually need in a communications
radio. So they wind up paying more than they should for a radio that
does less than they need while being layered with features that they'll
never use.

>jackl@pinetree.microserve.com (WB3U) writes:

>Isn't it silly that one must learn CW, even if they have no interest
>in doing CW just to be able to operate long-distance phone or data??

That sentiment is echoed by everyone who believes that some facet
of the requirements shouldn't apply to them.

>How can you say additional expense?? You still have to purchase a
>key? Some opt for the memory keyers and either of these can cost as
>much as a new TNC!

A ham who knows CW can be on the air with one transistor, a crystal,
and a hand key. The cost of a digital system isn't even in the
ballpark.

>>CW has no peer when both reliability and simplicity are considered.
>>The fact that CW also requires operators to show a degree of genuine
>>motivation before joining the ranks is a side benefit.

>What ranks?? I interpret that as though operators who passed the
>code requirement are elite, thus better? I think not!

Call them elite, better, or whatever you like, but the level of skill
and compentency of people who have made the grade is usually higher.
That's true of doctors, lawyers, engineers and Amateur Radio
operators.

>Not all people have the quick-thinking skills to learn CW, should
>they be held back?

Much as I would like to take this as a compliment, code proficiency is
actually just a matter of practice. And yes, they should be held
back. CW proficiency makes better operators.

>Remember, at one time getting a drivers license meant you had to
>demonstrate the ability to fix your own car! Because that's not
>required today, are we worse drivers than we were 75+ years ago??

I don't know. Do you have any statistics? The best operators are
usually those who know how the machine works.

>The more-code requirement WILL be dropped, it's no longer a question
>of 'IF' but now a question of 'WHEN'...

Oh well, I never expected Amateur Radio to last forever.

Strange, isn't it?

Despite massive crossposting, and clearly being noticed by a great
many people, no-one seems to have leaped in to help the poor fellow.

Was it a wind-up?
Is there such a thing as an "FM25"? and if so, what is it?

While I find the bowdlerised substitutes "Dang" "Sugar" etc. to
be hilariously pathetic, there's something rather sad about someone who
uses the industrial strength expletives for something as trivial as a
dysfunctional radio. What does he have left for special occasions when
something *big* goes wrong?

Cheers

I was never a mainstream manufacturer, but when I was putting CB rigs on 10m and 12m about 6 years ago, I built rigs for all modes: AM, FM, SSB, CW, and combinations. I did build one conversion for 12m CW, and it was CW only. It did sell. Of course, the swapfests where I was setting these up for sale were frequented by all kinds of hams, and at the price range I was selling them, no one was interested in resale value.

Boy do I wish the spots would come back so I could work some more 10m AM up above 29.000. CQ ten-AM phone! Where is everybody?

>How many HF rigs do you people think the manufactures could sell without
>CW on them? Without filters?

Well most rigs come with some way to key them, that only costs a few cents for a jack, but most rigs don't come with CW filters. Those are usually extra cost options (except on some of the more expensive radios). The fastest selling HF transceiver is an example. The IC-706 comes only with a SSB filter (and its spiritual ancestor, the IC-735 did too). You can then add one extra filter, either a SSB narrow filter, an AM filter, a digital mode filter, or a CW filter (wonder which one sells the best?). CW ops also say the keying sucks, chopping dits, so this radio obviously only has CW capability as an afterthought (despite the built in keyer, which is no more than a few lines of firmware code, essentially a throwaway gimmick advertised to let you send code with the mike up/down buttons). Yet it is the hottest selling radio on the market. If good CW performance is vital, then this rig wouldn't be selling, but it is, in record numbers.

(And going back some years, consider the Collins KWM-2, which surely had CW only as an afterthought, or the Galaxy V which was not much of a CW rig either, not even offering the option of a narrow filter. These rigs sold well too.) I won't mention the spate of 10 meter rigs aimed at the Tech+ market which were virtually unusable as CW rigs.

It would appear that Ten-Tec makes the best CW rigs on the market, but compare their market share to Japanese rigs which aren't as good CW performers, despite costing the same or even more, and you have to wonder how important most amateurs consider CW capabilities on their radios. (Of course this may say more about marketing dollars and a strong dealer incentive package than anything else.)

I'd note something else too, many of the features that make a radio a good CW radio also make it a good digital (FSK, QPSK, FSM, etc) radio. So you can't be sure even among those buying radios with good CW features if they are buying them for CW *use*, or for digital use, IE I know some folks who bought Omni VI's for digital use only.

Obviously there is still a market segment out there for CW functionality, and most manufacturers don't completely ignore it, but many don't make it a major engineering or marketing focus either.

I think we could turn your question around and ask how many HF rigs today are marketed without SSB or SSB filters. Aside from the QRP kit market (which is a tiny portion of the total HF equipment market),

I believe the answer is one (Ten-Tec again). Years ago there were dozens.

You might think that if the CW market were robust, there would be a commercial CW only rig in each of the major manufacturers' lines, and they would be capturing a sizable share of the HF market. But it isn't happening. I think one reason it isn't happening is that once you set out to make a good CW rig, you realize you've also almost made a good SSB rig or digital rig because it is the *receiver* that matters, and good receivers for any of those modes are nearly identical, with the only significant difference being filter bandwidth. Since CW can work through a SSB filter (albeit with considerable performance degradation), but the reverse is not true, the default filter becomes a SSB filter. Once you have the SSB filter, it's only a couple of dollars for a mike preamp and a balanced modulator, so the rig comes by default as a SSB rig, with the CW filter an option.

The pertinent metric would then seem to be, how many amateurs purchase the optional CW filter? I don't have any statistics, but it would be interesting to find out. (Even that is confusing, however. For example I bought the 500 Hz digital filter for the IC-706, but some might have bought it for CW because the 250 Hz filter has excessive ringing.)

The FM-25 is a synthesized FM broadcast transmitter sold in kit
form by Ramsey Electronics. Very popular for the micropower and
pirate FM broadcasters.

>
>Can someone explain this to me?

Almost every frequency on 75m has either a net or an informal group
parked on it. If you aren't one of them, they don't want you on "their"
frequency calling CQ. Some of these groups are friendlier than others,
and will gladly let you *join* them, others get hostile. Rather than
just calling CQ, it's a better practice to *listen* for a while and
get a feel for who "owns" the frequency. Then join or not as you would
on a 2 meter repeater.

There are a few *spot frequencies* on 40m and 20m that are similar,
but only 75m seems to be dominated by this sort of thing. That may
be because the propagation is so consistent night in and night out
on 75m compared to the other bands.

Of course a lot of people do just call CQ, but sooner or later they'll
run afoul of one of these groups. Then the sparks may fly. At least
that's my take on the situation from my regional perspective. YMMV.

REFERENCE DATA FOR RADIO ENGINEERS has been continually updated; now it's (I
believe) to the 8th edition. The name's a bit longer now, too--it contains
computers and other digitally-oriented words now. Still published by Sams,
but I don't know where (or if) IT&T fits in anymore.

It's current print, any larger bookstore should be able to order it for you no
problem. It's about $60 if I remember right.

I remember back in the seventies I was in a Radio Shack store looking at stereo speakers. The salesman showed me a system that had a power amp in each cabinet. He told me with great emphasis that each of those cabinets had over 10 thousand ohms. Wow that's a lot of ohms for your money! ;-)

Jack-

Suppose you can hear relatively weak stations in conversation on a frequency, but you call CQ anyway. That is bad operating practice.

Now, suppose a group of Hams "hang out" on a particular frequency. They may be doing other things in the shack, but all listening for someone to say something. It may have been 30 minutes since anyone said anything, but as soon as you call CQ on their frequency, they will all jump in and pretend you are causing severe interference! For such a crowded band, these Hams are real Hogs. They are the ones guilty of bad operating practice, not the innocent person calling CQ.

There are obviously two sides to this. On one side, you may not hear a weaker station talking to someone near you. Why not just ask if the frequency is occupied, before you call CQ? On the other side, why not invite the person calling CQ, to join the group? Is this asking too much?

It is naturally better to listen first. A CQ is wrong on CB and many
recent amateurs from the chicken band are afraid of CQ. I think
it is very wrong for operators with little experience to criticize
others. Courtesy is the name of the day.

If this is an old tubular ceramic capacitor, red, violet, white would
be 2.7 uuF 10%. There should be a wider band in front of the red band
that tells the temperature coefficient too, it may be brown and thus
hard to see, that would indicate a -30 ppm/C temperature coefficient.

Gary

Hi Monty,
The Arlington Radio Club is currently running classes. I suggest
you get in contact with Phil, N5PWW. He is the educational coordinator.
I am at work and don't have his phone number, but you should be
able to get him on 147.14 which is the AARC repeater.

Very 73,
Pat

>73,
>Jack WB3U

It is not a bad operating practice. But it is a fact that most 75 meter frequencies are "staked out" informally by groups of operators who know each other fairly well and have some interests in common. They often appear on "their" frequency and just announce their arrival or ask if anyone is around (meaning from their group.)

Listen around and you may find a group that is congenial to you. But feel free to call CQ whenever you want to -- I might answer you.

Has anyone ever shunt fed a crank-up tower?

Is there a good electrical connection between sections, or do the
sections need to be bonded together with a flexible cable?

Thanks,

Kevin WB4AIO

>Your comments are appreciated!

I have had my 70T for 7 months and have used it mobile (HF) and fixed
on all bands. I LOVE it. It is great on HF altho the Noise blanker
is a joke. There is a factory mod for it but I have not sent it in
yet.

Six meters is super, I have 66 Grids and 25 states with 10 watts and
6 el at 60 feet. Only a cupple real openings but it has been fun.
Rcvr is good on all bands and xmtrs are xmtrs so wat can I say.

If u have questions, let me know.

: jeffj@crl.com (Jeff Jones) wrote:

: >Because first the code goes and then the technical content on the
: >test goes and then we have CB! Just look at 2 meters these days...
: >Imagine that on 20 meters!

: Jeff, I agree 100% that the code should stay. However, I think the
: differences between 2M and 20M are due more to repeaters and
: propagation than to Morse ability.

This a reply to the this and another message.

I was for the no code and defended it here when it first came out. Well
I have seen is quite a few problems since it showed up, seen 2 repeaters
go private and watched the general quality just slide down hill. It's to
the point that I don't even bother doing 2 meters and am giving serious
thought to selling my HT. The fact is the CW requirement prevented that
from happening and once the requirement was dropped the problems showed
up big time.

In regards to the HF bands I haven't seen near the problems there that I
have on 2 meters. Are there idiots there, yep there are but they haven't
caused the quality to drop and the problems like 2 meters has. I can't wait
until they drop the CW test and watch it slide down hill.

Interesting to note that 2 meters has no CW requirement and lot's of
problems. 20 meters has a CW requirement and few problems to speak of.
I think I seen a pattern here.

In regards to CB with the FCC having very little money to do enforcement
I don't see why the masses don't flock there to work all the DX they
can get their hands on as there is virtually no chance of getting caught
now. A friend of mine who is a CB cer called the FCC to complain about problems from other
CBers and the guy just laughed at him.

So to the no coders who are the responsible upgrade and join us where
CW has keep almost all the idiots from bothering us.

Jeff Jones

: : are always empty & meaningless, containing only the following standard info:
: :
: : 1) The Weather
: : 2) Type of Radio
: : 3) Signal strength
: :
: : The only in depth conversations I have ever had on HF were with people
: : within 20 miles. You could use 2 meter, or 440 for that, and spend less
: : on gear! What is the point of yelling CQ CQ CQ (or ponding CQ CQ CQ) just
: : to get a stupid qsl card?
: : As far as the three items listed above,
: :
: : #1, weather = You can watch TV for that.
: :
: : #2, radio gear = Who cares?
: :
: : #3, Signal Strength = Who Cares?
: :
: :
: : The only good HF is QRP, because at least you are accomplishing something
: : somewhat outstanding. Buying a $2000 rig accomplishes nothing, but
: : wasting money. Anyone can work across the contry on a big 100w rig with a
: : huge antenna.
: :
: : HF offers little enjoyment to people who are more than 'postcard
: : chasers'. Even CB'ers, whom HF'ers seem to think are inferior, carry on
: : more interesting conversations.
: :
: :
: : Nate's suggestion for improving HF:
: :
: :
: : 1) Instead of code, require a test in socialization & conversational skills.
: :
: : 2) Allow no more than 50w 40m and below.
: :
: : 3) Make it illegal to talk about root canals (noone cares!)
: :
: : 4) Require a physical & hygene exam! (I get sick every time I go to a
: : HamFest!)

: :
: :
: : Just my thoughts. No-coders, you really aren't missing much, so if you
: : can't learn code for whatever reason, don't sweat it! You can get better
: : looking postcards at the corner drugstore, and you can have better
: : conversations with local trees, and other vegitation.
: :
: :
: : Nate.
: :
: :
: : Oh, yeah, you HF'ers are all going to look up my callsign, and to save
: : you the trouble, it's KB9LSX, and I am NO-CODE. But believe me, I've
: : worked my share of HF, and thus I have not upgraded.
: :

Nate, sounds like maybe you have been talking to the wrong people on HF, or maybe listening to the wrong people. As you mentioned above, a lot of HF contacts are weather, rig, and signal report. Very true, in a lot of cases as many hams in countries other that the U.S. don't speak the same language (English) as you do. I have a lot of friends in Japan who would love to speak with you on the radio, if you are fluent in converstional Japanese, I'll let them know you are raring to go.

I have worked a just a bare few (approximatly 48,000.....) stations on HF since I came to Guam eleven years ago. Lots of them were short contacts as you describe. But I have many, many times spoken to someone somewhere else in the world for HOURS. Trick is to find someone you have something in common with to talk about. I have found a lot of people that can't carry on a conversation about anything, why they are on the radio - who knows. You are corrct is assuming that a lot of people are on HF chasing DX - but with a KB9 call in the U.S. you shouldn't have to worry much about being a 'new country' for anyone, so that shouldn't present you any problems at all. There are just as many people on HF looking for someone to talk to - all you have to do is find them, figure out what to talk about, and have fun.

It sounds like maybe you need an equipment upgrade - 100 watts is not a 'big' rig, it's the norm. If you are trying to work the world with two watts and carry on long, interesting conversations, I can understand your frustration. Most hams are courteous enuff to give a QRP station a signal report, but it's not 'fun' carrying on a conversation with someone you can barely hear. I assume you are operating on 10 meters, and with low power - if you don't want to spend a ton of money on equipment, wait a few years. When the cycle gets up again you will be amazed at the fun you can have with low power on the ten meter band. Your statement about 'allowing no more power than 40 watts' won't help you have more fun, it will just make everyone else harder for you to hear.

I believe your original message was titled 'HF Sucks'. What
that has to do with hamfests and hygene escapes me. If hamfests make
you sick, simply don't go. I have been a ham for a long time, and
I think people (hams) go to hamfests for two basic reasons:

1. They are looking for expensive equipment at a rediculously low
price, i.e., somebody died and his brother, who doesn't know
squat about ham radio gear, will be there selling an Icom 781
and an Alpha amplifier for 100 bucks. This never happens, but
it doesn't prevent the squad of battery powered nurds from
lining up at the gate 3 hours before the hamfest opens...
They just keep looking for the deal of a lifetime.

2. They have equipment they want to sell, but they don't want to
sell it to anyone they know because the equipment has problems.
So they take it to a hamfest in hopes of selling it to someone
from another state who can't find them when they figure out
they just bought junk. If anyone doesn't agree with this
statement I can give you callsigns of people to call who will
verify it.

I don't like hamfests either, Nate, so I don't go. Wouldn't go to
Dayton if somebody gave me a round trip first class ticket and
spending money. So at least we agree on one thing you wrote.

Ham radio is just like anything else, it's what you make of it.
If you enjoy more talking to your buddy 20 miles down the road,
then talk to him on two meters. In the last two years, due to
being busy with other things, and not wanting to solit any more
unwanted 'postcards' than I already have, the only guy I talk
to is my buddy 11 miles down the street on 2 meter FM. But he's
a dentist, so I don't think we should ban talking about root
canals on HF, because he really likes talking about stuff like
that.

Give HF another chance, because if you don't you are really going
to miss a very great part of the hobby. Ten meters is a great band
because if you have a few tree's in the yard and a ball of wire,
you can make some pretty awsome antennas......

73, Jim KH2D

I am NOT the author but I wish I wrre smart enough to be so:

THE SEX LIFE OF THE ELECTRON

by D.C. Current

One night when his charge was pretty high, Micro-Farad decided to seek a cute little coil to let him discharge.

He picked up Millie-Amp and took her for a ride on his Megacycle. They rode across the Wheatstone Bridge, around the sine waves and stopped in the magnetic field by a flowing current.

Micro-Farad, attracted by Millie-Amps characteristic curves, soon had her fully charged and excited her resistance to a minimum. He laid her on the ground potential, raised her frequency and lowered her reluctance.

He pulled out his high voltage probe and inserted it in her socket connecting them in parallel, and began short circuiting her resistance shunt. Fully excited, Millie-Amp mumbled, "OHM - OHM - OHM - OHM".

With his tube operating at a maximum and her field vibrating with his current flow, caused her shunt to overheat and Micro-Farad was rapidly discharged and drained of every electron.

They fluxed all night, trying various connections and sockets, until his magnet had a soft core and lost all of it's field strength.

Afterwards, Millie-Amp tried self induction and damaged her selenoids. With his battery fully discharged, Micro-Farad was unable to excite his field, so they spent the rest of the night reversing polarity and blowing each other's fuses.

Here is a summary of news items covered on edition #157 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 5-Apr:
-
1. NASA Shortens Atlantis Mission, SAREX Contacts Cancelled
2. Amateur Claims TSS Experiment Not a Total Failure
3. CBC, Canadian Government Save Radio Canada International
4. AMSAT Phase 3-D Satellite Parts Delivered to Assembly Site
5. ARRL Drops Senior Discounts on Foreign QST Subscriptions
6. Hewlett-Packard Co-founder Dies in California at 83
7. Special Report: Telesat Canada's Anik E-1 Satellite Fails
8. Hubbard Suggests Combining Analog and Digital TV Signals
9. Weekly Propagation Forecast with George Bowen, N2LQS
10. "Amateur Radio Newsline" - Edition #972 from Los Angeles
11. FCC Institutes "Try Before You Study" Amateur Licenses
12. Upcoming Special Event Stations
13. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
14. Light Theory Debunked, Darksuckers Make More Sense
15. "The RAIN Dial-up" from Chicago
-
(FCC WARNING: Monday is April Fools' Day and prolonged exposure to
some of these news items may be hazardous to your health.)
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis, AJ1R, of St.
Petersburg, Florida, where listeners can hear "This Week in
Amateur Radio" on the AJ1R repeater system on 51.84, 145.23,
147.285, 442.075, 443.625, and 443.95 MHz serving Florida's Central
Gulf Coast.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.

Satellite space and uplink services are provided by Skyvision, Incorporated as a service to the amateur radio community. Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

4412. Re: HT Dual-Band Amp vs. Dual-Band Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: kjsmith@violin.aix.calpoly.edu

After reading late in this thread, I thought I'd jump in with my two cents.

Ham rigs offer something the commercial rigs don't: Easy programming. When I'm traveling, I need to be able to punch in a repeater and use it. I've got an Icom IC-2700H as my current mobile rig, and while I think it's a piece of trash, it is convenient (I'd buy an Alinco if I had it to do over again).

But... I'm also a fan of commercial performance. I've got a couple of Syntor's stashed away that I'm planning to add the "left-coast" control units to eventually. Still, they're pretty big, and won't likely end up in my car. I'll use them as base units.

For mobiling around my county, I'm planning to purchase a couple of Motorola MaxTrac 300's (or GM300's). They're cheap ($500 new, less used), synthesized, scan, have PL, etc. They're also pretty small. Once I get some cash saved and mount these in my truck, the Icom will likely remain off most of the time. I hate it's intermod rejection (I call it my paging receiver....doesn't matter what frequency I'm on, I can hear pagers on most of them).

The MaxTracs are fairly easy to repair, and provide good performance. I don't notice intermod problems with them, and they're simple to operate.

But still...I do need the frequency agility of a ham rig now and again. Since I can't find a reasonable ham rig for performance, I'm stuck using both.

I tend to avoid rock-bound rigs, since I change my mind too frequently to buy crystals. Also, being involved with public safety, I need a few more channels than the averae ham.

I'm not sure this offers much of a solution to most (since it involves high dollars having multiple radios), but it works for me.

ARLP013 Propagation de KT7H

ZCZC AP34
QST de W1AW
Propagation Forecast Bulletin 13 ARLP013
From Tad Cook, KT7H
Seattle, WA March 29, 1996
To all radio amateurs

SB PROP ARL ARLP013
ARLP013 Propagation de KT7H

Solar flux remains low. Last week's average solar flux was up only a couple of points from the previous week. Geomagnetic conditions have been unsettled, with several periods with a K index of four. The worst day was March 21 when the A index was 29 and the K index reached five.

Don't expect any big changes. Recurrent coronal holes may cause disturbances between April 6-9 and 16-21. During this time expect brief active to minor storm periods at middle latitudes and brief active to major storm levels at higher latitudes.

The listing in last week's bulletin of sunspot numbers and solar flux was correct, but the dates shown were from the previous week. Below is the same data but with the corrected dates for March 14 through 20.

Sunspot Numbers for March 14 through 20 were 17, 15, 15, 12, 11, 11 and 0, with a mean of 11.6. 10.7 cm flux was 70.8, 70.4, 71, 70.6, 70.6, 69.9 and 69.3, with a mean of 70.4.

Sunspot Numbers for March 21 through 27 were 15, 21, 24, 17, 17, 32 and 29, with a mean of 22.1. 10.7 cm flux was 70.4, 73.8, 72.1, 71.2, 72.5, 71.9 and 71.8, with a mean of 72.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 MARCH AND FORECAST FOR 30 MARCH - 01 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 28 Mar
Daily Proton Fluence >1 MeV: 2.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.1E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Mar 31 Mar 01 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Mar: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly quiet with one unsettled period
between 1800 and 2100 UT.

Estimated Indices : A K Observed A Index 28 Mar
Learmonth 7 2122 1232
Fredericksburg 5 9
Planetary 5 9

Observed Kp for 28 Mar: 2323 3222

2B. MAGNETIC FORECAST
Date Ap Conditions
30 Mar 5 Quiet
31 Mar 5 Quiet
01 Apr 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
29 Mar Fair-normal Fair-normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
30 Mar Normal Normal Normal
31 Mar Normal Normal Normal
01 Apr Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
29 Mar -10

Observed Australian Regional MUFs:
Darwin: 15 to 30% depressed from 0000 to 0900 UT and from
1200 to 1600 UT, and 15% enhanced from 1000 to 1100 UT.
Townsville: 10 to 30% depressed from 0000 to 1800 UT.
Sydney: 15 to 30% depressed from 0000 to 1100 UT.
Hobart: 15 to 30% depressed from 0000 to 1400 UT. Spread
-F has been observed from 1100 to 1900 UT.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
30 Mar 5 near predicted monthly values
31 Mar 5 near predicted monthly values
01 Apr 5 near predicted monthly values

4416. Motorola VHF Equipment Questions

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-29 00:00:00 UTC
From: nadzam@garlic.com
Message-ID: <4jgp7a$gh4_001@nadzam.garlic.com>
Source record: 228693
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

I have a friend that has come into some real nice Motorola
VHF equipment. She would like to know what this equipment is
worth, as she intends to sell it all.

1st. She has 6 Motorola VHF Power Amplifiers.
These are BRAND NEW in the ORIGINAL boxes. They
were obtained during the closure of an Airforce base.
They come with a Long Power Cable, and a Long coax cable.
These are all packaged as to be installed in a mobile unit
of some type. They have a TO-220 transistor driving
an RF-Power Transistor that has House markings.

Motorola #N1274A, Frequency 136-150.7 Mhz
Kit No. NLD7701A

The Amplifier is all brushed Aluminum.
2.5"H x 4.75"D x 6" W

What are these worth?
==========

Next She has Qty 3, P100 T-Band hand helds. 470-495 Mhz.

Last 1 HT90, also T-Band. Some have holsters, and all
have batteries.

What are these units worth?

==========

+GDB:>
+GDB:>It's not bad practice to call cq on any frequency,
+GDB:>including 2m repeaters, in my book.
+GDB:
+GDB:Unfortunately, your book is not the one in common use in all localities
+GDB:or situations. When your book differs from the locally accepted book,
+GDB:friction is likely to result. Thus the old adage of "When in Rome..."
+GDB:applies. Adapting to local usage, when that usage isn't illegal, immoral,
+GDB:or overly fattening, is just common courtesy, and that's always a good
+GDB:practice.
+GDB:

I don't call CQ on two although I fail to see the difference between
that and frequently announcing yourself. The problem with two meters
is that you get cliques that refuses to talk to anyone else. It is
embarrassing that amateur radio has descended to that level in many
places.

CrACKeD <cracked@primenet.com> wrote:

+GDB:: : The only in depth conversations I have ever had on HF were with people
+GDB:: : within 20 miles. You could use 2 meter, or 440 for that, and spend less
+GDB:: : on gear! What is the point of yelling CQ CQ CQ (or ponding CQ CQ CQ) just
+GDB:: : to get a stupid qsl card?
+GDB:: : As far as the three items listed above,
+GDB:: :
+
+GDB:: :
+GDB:: : Just my thoughts. No-coders, you really aren't missing much, so if you
+GDB:: : can't learn code for whatever reason, don't sweat it! You can get better
+GDB:: : looking postcards at the corner drugstore, and you can have better
+GDB:: : conversations with local trees, and other vegitation.
+GDB:: :
+

+GDB:Bravo. I am also a no-code tech and my views are very similar. I never
+GDB:have witnessed a HF QSO which contained anything more exciting than my
+GDB:cat could tell me. I guess some hams get kicks off that sort of
+GDB:operating, why I'll never know. I prefer more modern modes of
+GDB:communication, such as voice. Computer aided modes and satellite
+GDB:communications are much more interesting as well.
+GDB:

None of you have tried very hard. I have used HF a lot to practice my
Spanish. It seems to me that I have pointed out at least one very
useful thing on hf.

There has been a lot of useful health and welfare traffic on HF.

If you are finding nothing it is because you don't try or don't want
to or are just rationalizing you inability to get a license for HF.

Seems to me that the chronic complainers seem to have 1 small problem and I have the solution.

Follow the example of the war protesters of the 60's. BURN your licenses. Get off the airwaves..show
your unhappiness by shutting down and dropping out.

I would also shot the SOB that forced you to get that dreaded license. How dare they make you do something you didn't want to do!!!

Stay off the wicked nasty HF. Show your contempt by never upgrading. Leave HF to the DX'ers and the contesters.

Stay in your basements with video screens glued to your foreheads. Be like Burt..be like Drew..be like Jerry
Moan, groan, do anything it takes to scare the big bad HF away.

Remember only you can prevent forset fires. RF caused IQ changes, stay away

WARNING WILL ROBINSON WARNING stay off HF stay where it's safe

DANGER DANGER HF will kill stay away

This has been a pubic (happy burt??) service announcement sponsored

Kids In Space Serving Many Amateur Spectrum Sections (KISSMYASS)

No code or Know code who gives a darn

Steve

The ARRL Letter
Electronic Update
March 29, 1996

IN THIS UPDATE:

* NY Supreme Court blasts town's tower restrictions
* SAREX mission gets late start; QSO rescheduled
* Astronaut to visit CT SAREX school
* Scouts handy in makeshift tower construction
* FCC tells 2-meter QRMers to pay up
* FCC approves spectrum reallocation plan
* In Brief: Director Burden recovering; Top club newsletters; N4GFO/mm

---

NY SUPREME COURT RENDERS FAVORABLE RULING IN TOWER CASE

One of the reasons J. P. Kleinhaus, AA2DU, chose to live in Cortlandt Manor, New York, in 1993, was that the town's zoning ordinance did not restrict him from erecting a planned 120-foot tower. But by the time he closed the deal on his house in early 1994, a new zoning ordinance had gone into effect, one prohibiting towers above 35 feet. The town denied his application for the much taller tower, and Kleinhaus sued. But on March 20, the New York Supreme Court handed down a ruling annulling the Zoning Board of Appeal's decision as "irrational, arbitrary and capricious."
